## Contents

|  |     |
|--|-----|
| Foreword .....   | 24  |
| 1 Scope.....   | 25  |
| 2 References .....   | 25  |
| 3 Definitions, symbols and abbreviations .....                         | 27  |
| 3.1 Definitions.....   | 27  |
| 3.2 Symbols.....   | 27  |
| 3.3 Abbreviations.....   | 27  |
| 4 Common test environments.....  | 28  |
| 4.1 Environmental conditions.....                                      | 28  |
| 4.1.1 Temperature .....  | 28  |
| 4.1.2 Voltage.....   | 28  |
| 4.2 Common requirements of test equipment.....                         | 29  |
| 4.2.1 General functional requirements.....                             | 29  |
| 4.2.2 Minimum functional requirements .....                            | 30  |
| 4.2.2.1 Supported Cell Configuration .....                             | 30  |
| 4.2.2.1.1 Supported Channels for an E-UTRA cell (NSA mode only) .....  | 30  |
| 4.2.2.1.2 Supported Channels for a NR cell.....                        | 30  |
| 4.2.2.1.2.1 Logical channels.....                                      | 30  |
| 4.2.2.1.2.2 Transport channels.....                                    | 30  |
| 4.2.2.1.2.3 Physical channels .....                                    | 31  |
| 4.2.2.1.2.4 Physical signals .....                                     | 31  |
| 4.3 Reference test conditions.....                                     | 31  |
| 4.3.1 Test frequencies.....  | 31  |
| 4.3.1.0 General .....  | 31  |
| 4.3.1.0A Mid test channel bandwidth .....                              | 31  |
| 4.3.1.0B Low test channel bandwidth .....                              | 33  |
| 4.3.1.0C High test channel bandwidth.....                              | 35  |
| 4.3.1.0D Bandwidth part.....   | 37  |
| 4.3.1.0E Void.....   | 39  |
| 4.3.1.1 Test frequencies for NR operating bands in FR1 .....           | 40  |
| 4.3.1.1.1 NR operating bands in FR1 .....                              | 40  |
| 4.3.1.1.2 NR inter-band CA configurations in FR1 .....                 | 155 |
| 4.3.1.1.2.1 NR inter-band CA configurations in FR1 (two bands) .....   | 155 |
| 4.3.1.1.2.2 NR inter-band CA configurations in FR1 (three bands) ..... | 156 |
| 4.3.1.1.3 NR intra-band contiguous CA in FR1 .....                     | 156 |
| 4.3.1.1.3.1 – 4.3.1.1.3.39 FFS .....                                   | 156 |
| 4.3.1.1.3.40 NR Intra-band contiguous configurations CA_n40 .....      | 156 |
| 4.3.1.1.3.40.1 CA_n40B.....  | 156 |
| 4.3.1.1.3.41 NR Intra-band contiguous configurations CA_n41 .....      | 158 |
| 4.3.1.1.3.41.1 CA_n41C.....  | 159 |
| 4.3.1.1.3.42 – 4.3.1.1.3.65 FFS .....                                  | 164 |
| 4.3.1.1.3.66 NR Intra-band contiguous configurations CA_n66 .....      | 164 |
| 4.3.1.1.3.66.1 CA_n66B.....  | 164 |
| 4.3.1.1.3.67 – 4.3.1.1.3.77 FFS .....                                  | 173 |
| 4.3.1.1.3.78 NR Intra-band contiguous configurations CA_n78 .....      | 173 |
| 4.3.1.1.3.78.1 CA_n78C.....  | 173 |
| 4.3.1.1.3.78.2 CA_n78B.....  | 177 |
| 4.3.1.1.4 Void .....   | 179 |
| 4.3.1.1.5 NR intra-band non-contiguous CA configurations in FR1 .....  | 179 |
| 4.3.1.1.5.1 – 4.3.1.1.5.65 FFS .....                                   | 179 |
| 4.3.1.1.5.66 CA_n66(2A) .....  | 179 |
| 4.3.1.1.5.67 – 4.3.1.1.5.76 FFS .....                                  | 182 |
| 4.3.1.1.5.77 CA_n77(2A) .....  | 182 |
| 4.3.1.1.5.78 CA_n78(2A) .....  | 182 |
| 4.3.1.1.6 NR Operating SUL band combinations in FR1 .....              | 183 |

|                |  |     |
|----------------|--|-----|
| 4.3.1.2        | Test frequencies for NR operating bands in FR2 .....             | 184 |
| 4.3.1.2.1      | NR operating bands in FR2 .....                                  | 184 |
| 4.3.1.2.2      | NR inter-band CA configurations in FR2 .....                     | 193 |
| 4.3.1.2.3      | NR intra-band contiguous CA configurations in FR2 .....          | 193 |
| 4.3.1.2.3.1    | NR Intra-band contiguous CA configurations for CA_n257 .....     | 193 |
| 4.3.1.2.3.1.1  | CA_n257B .....   | 193 |
| 4.3.1.2.3.1.2  | CA_n257C .....   | 195 |
| 4.3.1.2.3.1.3  | CA_n257D .....   | 198 |
| 4.3.1.2.3.1.4  | CA_n257E .....   | 200 |
| 4.3.1.2.3.1.5  | CA_n257F .....   | 200 |

| 4.3.1.2.3.5.15 | CA_n261Q .....   | 298 |
| 4.3.1.2.4      | NR intra-band non-contiguous CA configurations in FR2 .....      | 298 |
| 4.3.1.2.4.1    | NR Intra-band non-contiguous CA configurations for CA_n257 ..... | 298 |

|                              |  |     |
|------------------------------|--|-----|
| 4.3.1.2.4.2                  | NR Intra-band non-contiguous CA configurations for CA_n258 .....             | 298 |
| 4.3.1.2.4.3                  | FFS .....  | 298 |
| 4.3.1.2.4.4                  | NR Intra-band non-contiguous CA configurations for CA_n260 .....             | 298 |
| 4.3.1.2.4.4.1                | CA_n260(XA) .....  | 298 |
| 4.3.1.2.4.4.2                | CA_n260(A-I).....  | 298 |
| 4.3.1.2.4.5                  | NR Intra-band non-contiguous CA configurations for CA_n261 .....             | 300 |
| 4.3.1.2.4.5.1                | CA_n261(XA) .....  | 300 |
| 4.3.1.3                      | Test frequencies for NR band combinations between FR1 and FR2 .....          | 301 |
| 4.3.1.3.1                    | NR inter-band CA configurations between FR1 and FR2 .....                    | 301 |
| 4.3.1.3.2                    | NR-DC configurations between FR1 and FR2 .....                               | 301 |
| 4.3.1.3.2.1                  | NR-DC configurations between FR1 and FR2 (two bands) .....                   | 301 |
| 4.3.1.4                      | Test frequencies for EN-DC band combinations within FR1 .....                | 301 |
| 4.3.1.4.1                    | Inter-band EN-DC configurations within FR1.....                              | 301 |
| 4.3.1.4.1.1                  | General .....  | 301 |
| 4.3.1.4.1.2                  | Inter-band EN-DC configurations within FR1 (two bands) .....                 | 302 |
| 4.3.1.4.1.3                  | Inter-band EN-DC configurations within FR1 (three bands) .....               | 305 |
| 4.3.1.4.1.4                  | Inter-band EN-DC configurations within FR1 (four bands).....                 | 308 |
| 4.3.1.4.1.6                  | Inter-band EN-DC configurations within FR1 (six bands).....                  | 313 |
| 4.3.1.4.2                    | Intra-band contiguous EN-DC configurations within FR1 .....                  | 314 |
| 4.3.1.4.2.1 – 4.3.1.4.2.40   | FFS .....  | 314 |
| 4.3.1.4.2.41                 | Intra-band contiguous EN-DC configurations DC_(n)41 .....                    | 314 |
| 4.3.1.4.2.41.1               | DC_(n)41AA .....   | 314 |
| 4.3.1.4.2.42.to 4.3.1.4.2.70 | FFS .....  | 331 |
| 4.3.1.4.2.71.1               | DC_(n)71AA .....   | 331 |
| 4.3.1.4.3                    | Intra-band non-contiguous EN-DC configurations within FR1 .....              | 340 |
| 4.3.1.4.3.1 – 4.3.1.4.3.40   | FFS .....  | 340 |
| 4.3.1.4.3.41                 | Intra-band non-contiguous EN-DC configurations DC_41_n41.....                | 340 |
| 4.3.1.4.3.41.1               | DC_41A_n41A.....   | 340 |
| 4.3.1.4.3.41.2               | DC_41C_n41A .....  | 341 |
| 4.3.1.5                      | Test frequencies for EN-DC band combinations including FR2 .....             | 342 |
| 4.3.1.5.1                    | Inter-band EN-DC configurations including FR2 .....                          | 342 |
| 4.3.1.6                      | Test frequencies for EN-DC band combinations including FR1 and FR2 .....     | 374 |
| 4.3.1.6.1                    | Inter-band EN-DC configurations including FR1 and FR2 .....                  | 374 |
| 4.3.1.7                      | Test frequencies for Non-3GPP Access.....                                    | 378 |
| 4.3.1.7.1                    | WLAN Test frequencies.....   | 378 |
| 4.3.2                        | Radio conditions.....  | 378 |
| 4.3.2.1                      | FR1, normal propagation condition for connected .....                        | 378 |
| 4.3.2.2                      | FR2, condition for OTA .....   | 378 |
| 4.3.3                        | Physical channel allocations.....  | 378 |
| 4.3.3.1                      | E-UTRA .....   | 378 |
| 4.3.3.2                      | NR .....   | 378 |
| 4.3.3.2.1                    | Antennas.....  | 378 |
| 4.3.3.2.2                    | Downlink physical channels and physical signals.....                         | 378 |
| 4.3.3.2.3                    | Mapping of downlink physical channels and signals to physical resources..... | 378 |
| 4.3.4                        | Signal levels .....  | 379 |
| 4.3.4.1                      | Signal levels for conducted testing .....                                    | 379 |
| 4.3.4.1.1                    | Downlink signal levels .....   | 379 |
| 4.3.4.2                      | Signal levels for OTA testing.....   | 379 |
| 4.3.5                        | Standard test signals.....   | 379 |
| 4.3.6                        | Physical layer parameters.....   | 379 |
| 4.3.6.1                      | Downlink physical layer parameters .....                                     | 379 |
| 4.3.6.1.1                    | Physical layer parameters for scheduling of PUSCH .....                      | 379 |
| 4.3.6.1.1.1                  | Physical layer parameters for DCI format 0_0 .....                           | 379 |
| 4.3.6.1.1.2                  | Physical layer parameters for DCI format 0_1 .....                           | 380 |

## Foreword

This Technical Specification has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
  - 1 presented to TSG for information;
  - 2 presented to TSG for approval;
  - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

The present document is part 1 of a multi-part deliverable covering the 5G System (5GS) User Equipment (UE) conformance specification, as identified below:

- **3GPP TS 38.508-1: "5GS; User Equipment (UE) conformance specification; Part 1: Common test environment"** (the present document).
- 3GPP TS 38.508-2 [10]: "5GS; User Equipment (UE) conformance specification; Part 2: Common Implementation Conformance Statement (ICS) proforma".

---

## 1 Scope

The present document defines the test environment for the 5G System.

This specification covers all aspects, including NG-RAN, 5GC and interworking between 5GS and EPS used for conformance tests of User Equipment (UE).

---

## 2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.

## 3 Definitions, symbols and abbreviations

### 3.1 Definitions

For the purposes of the present document, the terms and definitions given in TR 21.905 [1] and the following apply. A term defined in the present document takes precedence over the definition of the same term, if any, in TR 21.905 [1].

**B:** a value followed by "B" is a binary value.

**H:** a value followed by "H" is a hexadecimal value.

### 3.2 Symbols

For the purposes of the present document, the following symbols apply:

### 3.3 Abbreviations

For the purposes of the present document, the abbreviations given in TR 21.905 [1] and the following apply. An abbreviation defined in the present document takes precedence over the definition of the same abbreviation, if any, in TR 21.905 [1].

|         |                                    |
|---------|------------------------------------|
| 5GC     | 5G Core Network                    |
| 5GMM    | 5GS Mobility Management            |
| 5GS     | 5G System                          |
| 5GSM    | 5GS Session Management             |
| EN-DC   | E-UTRA-NR Dual Connectivity        |
| MCG     | Master Cell Group                  |
| MR-DC   | Multi-RAT Dual Connectivity        |
| NE-DC   | NR-E-UTRA Dual Connectivity        |
| NGC     | NG Core Network. Synonym of 5GC.   |
| NGEN-DC | NG-RAN E-UTRA-NR Dual Connectivity |
| NG-RAN  | NG Radio Access Network            |
| NR      | NR Radio Access                    |
| RRC     | Radio Resource Control             |
| SCG     | Secondary Cell Group               |
| SS      | System Simulator                   |

## 4 Common test environments

### 4.1 Environmental conditions

The requirements in this clause apply to all types of UE(s).

#### 4.1.1 Temperature

Regarding FR1 the UE shall fulfil all the requirements in the full temperature range of:

**Table 4.1.1-1: Temperature conditions for FR1**

|                |   |
|----------------|---|
| +15°C to +35°C | For normal conditions (with relative humidity of 25 % to 75 %)  |
| -10°C to +55°C | For extreme conditions (see IEC publications 68-2-1 and 68-2-2) |

Outside this temperature range the UE, if powered on, shall not make ineffective use of the radio frequency spectrum. In no case shall the UE exceed the transmitted levels as defined in TS 38.101-1 [7] clause 6.2 for extreme operation.

The normative reference for this requirement is TS 38.101-1 [7] Annex E.2.

All RF requirements for UEs operating in FR2 are defined over the air and can only be tested in an OTA chamber.

Regarding FR2 the UE shall fulfil all requirements in the temperature range defined in Table 4.1.1-2.

**Table 4.1.1-2: Temperature conditions for FR2**

|                |   |
|----------------|---|
| +15°C to +35°C | For normal (room temperature) conditions with relative humidity of 25% to 75% |
| -10°C to +55°C | For extreme conditions  |

Outside this temperature range the UE, if powered on, shall not make ineffective use of the radio frequency spectrum. In no case shall the UE exceed the transmitted levels as defined in TS 38.101-2[8] clause 6.2 for extreme operation.

The normative reference for this requirement is TS 38.101-2 [8] Annex E.2.

Some tests are performed also in extreme temperature conditions. These test conditions are denoted as TL (temperature low, -10°C) and TH (temperature high, +55°C).

#### 4.1.2 Voltage

**Editor's Note: This clause is incomplete. The following items are missing or are incomplete:**

- Methodology to control the voltage in a case which a power cable is not connected to DUT is FFS since it is not agreed whether we can connect the power cable to DUT at the OTA measurement situation yet.

Regarding both FR1 and FR2 the UE shall fulfil all the requirements in the full voltage range, i.e. the voltage range between the extreme voltages.

The manufacturer shall declare the lower and higher extreme voltages and the approximate shutdown voltage. For the equipment that can be operated from one or more of the power sources listed below, the lower extreme voltage shall not be higher, and the higher extreme voltage shall not be lower than that specified below.

**Table 4.1.2-1: Voltage conditions**

| <b>Power source</b>         | <b>Lower extreme voltage</b> | <b>Higher extreme voltage</b> | <b>Normal conditions voltage</b> |
|-----------------------------|------------------------------|-------------------------------|----------------------------------|
| AC mains                    | 0.9 * nominal                | 1.1 * nominal                 | nominal                          |
| Regulated lead acid battery | 0.9 * nominal                | 1.3 * nominal                 | 1.1 * nominal                    |
| Non regulated batteries:    |                              |                               |                                  |
| Leclanché                   | 0.85 * nominal               | nominal                       | nominal                          |
| Lithium                     | 0.95 * nominal               | 1.1 * nominal                 | 1.1 * nominal                    |
| Mercury/nickel & cadmium    | 0.90 * nominal               |                               | nominal                          |

Outside this voltage range the UE if powered on, shall not make ineffective use of the radio frequency spectrum. In no case shall the UE exceed the transmitted levels as defined in TS 38.101-1[7] and TS 38.101-2[8] clause 6.2 for extreme operation. In particular, the UE shall inhibit all RF transmissions when the power supply voltage is below the manufacturer declared shutdown voltage.

The normative reference for this requirement is TS 38.101-1 [7] Annex E.2 and TS 38.101-2 [8] Annex E.2.

Some tests are performed also in extreme voltage conditions. These test conditions are denoted as VL (lower extreme voltage) and VH (higher extreme voltage).

## 4.2 Common requirements of test equipment

Mobile conformance testing can be categorized into 3 distinct areas:

- RF Conformance Testing consisting of:
  - Transmission and Reception Conformance Testing.
  - Performance Conformance Testing.
- RRM Conformance Testing.
- Signalling Conformance Testing.

The test equipment required for each category of testing may or not be different, depending on the supplier of the test equipment. However, there will be some generic requirements of the test equipment that are essential for all three categories of test, and these are specified in this clause.

In addition, there will be requirements to test operation in multi-system configurations other than E-UTRA and NR dual connectivity (EN-DC). However, these would not form a common test equipment requirement for the three test areas and are not considered in the present document.

### 4.2.1 General functional requirements

**NOTE:** This clause has been written such that it does not constrain the implementation of different architectures and designs of test equipment.

All test equipment used to perform conformance testing for frequency range 1 on a UE shall provide the following minimum functionality:

- Conducted test method

All test equipment used to perform conformance testing for frequency range 2 on a UE shall provide the following minimum functionality:

- OTA test method

All test equipment used to perform conformance testing on a UE shall provide a platform suitable for testing UE's that are either:

- non-standalone(NSA) mode; or
- standalone(SA) mode.

All test equipment used to perform conformance testing on a UE shall provide a platform suitable for testing UE's that are either of following duplex mode for NR and E-UTRA (NSA only) respectively.

- a) FDD Mode; or
- b) TDD Mode; or
- c) both FDD/TDD Modes.

All test equipment shall provide the following minimum functionality.

- The capability of emulating a single NR cell and a single E-UTRA (for NSA mode only) cell with the appropriate channels to allow the UE to register on the cell.
- The capability to allow the UE to set up an RRC connection with the system simulator, and to maintain the connection for the duration of the test.
- The capability (for the specific test):
  - to select and support an appropriate radio bearer for the downlink;
  - to set up and support the appropriate radio bearer for the uplink;

## 4.2.2 Minimum functional requirements

### 4.2.2.1 Supported Cell Configuration

The System Simulator shall provide the capability to simulate a minimum number of cells whose number and capabilities are governed by the test cases that need to be performed (test cases are defined in TS 38.523-1 [12] (Signalling), TS 38.521-1 [14], TS 38.521-2 [15], TS 38.521-3 [16] (TRx), TS 38.521-4 [17] (Performance), TS 38.533 [18] (RRM), TS 37.571-1 [39] and TS 37.571-2 [40] (Positioning)).

To perform test cases requiring multiple cell(s), the system simulator shall provide multiple cells offering the capabilities as required by the test case.

The type and number of channels (especially physical channels) constitute an important set of capabilities for a cell. The following clauses list possible channels that may be supported by the SS. Each channel type, however, and the minimum number of channels needed are only mandatory if specific test cases require them.

The mapping between Logical and Transport channels is as described in TS 38.321 [20]. Similarly, the mapping between Transport channels and Physical channels is as described in TS 38.211, TS 38.302 and TS 38.212. The reference measurement channels (mapping between Transport channels and Physical channels for PDSCH/PDCCH) are defined in TS 38.521-1 [14] annex A

#### 4.2.2.1.1 Supported Channels for an E-UTRA cell (NSA mode only)

Requirement for supported channels for E-UTRA cell is described in TS 36.508[2].

#### 4.2.2.1.2 Supported Channels for a NR cell

##### 4.2.2.1.2.1 Logical channels

| Logical channel | Minimum number        | Comments   |
|-----------------|-----------------------|--|
| BCCH            | 0 for EN-DC, 1 for SA |  |
| CCCH            | 0 for EN-DC, 1 for SA |  |
| DCCH            | 0 for EN-DC, 2 for SA | Split SRB or SRB3 is optional in EN-DC           |
| PCCH            | 0 for EN-DC, 1 for SA |  |
| DTCH            | n                     | Depending on SS's support for RB service testing |

##### 4.2.2.1.2.2 Transport channels

| Transport channel | Minimum number | Comments |
|-------------------|----------------|----------|
|-------------------|----------------|----------|

|        |                         |  |
|--------|-------------------------|--|
| BCH    | 1                       |  |
| PCH    | N/A for EN-DC, 1 for SA |  |
| RACH   | 1                       |  |
| DL-SCH | 1                       |  |
| UL-SCH | 1                       |  |

#### 4.2.2.1.2.3 Physical channels

| Physical channel | Minimum number | Comments  |
|------------------|----------------|---|
| PBCH             | 1              | Physical Broadcast Channel  |
| PDCCH            | 1              | The physical downlink control channel carries scheduling assignments and other control information. |
| PDSCH            | 1              | Physical Downlink Shared Channel  |
| PUCCH            | 1              | The physical uplink control channel carries uplink control information                              |
| PUSCH            | 1              | Physical Uplink Shared Channel  |
| PRACH            | 1              | Physical Random Access Channel  |

#### 4.2.2.1.2.4 Physical signals

| Physical signal                      | Minimum number | Comments          |
|--------------------------------------|----------------|-------------------|
| Demodulation reference signal        | NA             | UL                |
| Sounding Reference signal            | NA             | UL, if applicable |
| Phase Tracking Reference Signal      | NA             | UL, if applicable |
| Demodulation reference signal(PDSCH) | NA             | DL                |
| Demodulation reference signal(PDCCH) | NA             | DL                |
| Demodulation reference signal(PBCH)  | NA             | DL                |
| Phase Tracking Reference Signal      | NA             | DL, if applicable |
| CSI reference signal                 | NA             | DL                |
| Primary synchronisation signal       | NA             | DL                |
| Secondary synchronisation signal     | NA             | DL                |

## 4.3 Reference test conditions

### 4.3.1 Test frequencies

#### 4.3.1.0 General

The test frequencies are based on operating bands defined in TS 38.101-1 [7], TS 38.101-2 [8] and TS 38.101-3 [9].

#### 4.3.1.0A Mid test channel bandwidth

The Mid test channel bandwidth definition for RF is given in Table 4.3.1.0A-1 and Table 4.3.1.0A-2 for FR1 and FR2 respectively.

**Table 4.3.1.0A-1: Mid Test Channel bandwidths for each NR band, FR1**

| NR band / UE Mid Test Channel bandwidth  | Mid [MHz]                         |
|--|-----------------------------------|
| n1   | 15 <sup>6</sup> , 25 <sup>7</sup> |
| n2   | 15                                |
| n3   | 20                                |
| n5   | 15                                |
| n7   | 15 <sup>6</sup> , 25 <sup>7</sup> |
| n8   | 15                                |
| n12  | 10                                |
| n14  | 10                                |
| n20  | 15                                |
| n25  | 15                                |
| n26  | 10 <sup>8</sup>                   |
| n28  | 15                                |
| n29  | 10 <sup>2</sup>                   |
| n30  | 10                                |
| n34  | 10                                |
| n38  | 15                                |
| n39  | 20                                |
| n40  | 30                                |
| n41  | 60                                |
| n48  | 20 <sup>4</sup> , 40 <sup>5</sup> |
| n50  | 20                                |
| n51  | 5                                 |
| n53  | 10                                |
| n65  | 15                                |
| n66  | 20                                |
| n70  | 15                                |
| n71  | 10                                |
| n74  | 15                                |
| n75  | 15 <sup>2</sup>                   |
| n76  | 5 <sup>2</sup>                    |
| n77  | 50                                |
| n78  | 50                                |
| n79  | 60                                |
| n80  | 20 <sup>3</sup>                   |
| n81  | 15 <sup>3</sup>                   |
| n82  | 15 <sup>3</sup>                   |
| n83  | 15 <sup>3</sup>                   |
| n84  | 15 <sup>3</sup>                   |
| n86  | 20 <sup>3</sup>                   |
| Note 1: For UEs with limited UE channel bandwidth capability, if mid channel BW is not supported by the UE, select the closest channel BW to the average channel BW of all supported channel bandwidths among all SCSs. If there are two channel bandwidths that have same distance to the mathematical center, the higher one is selected. This shall apply only for Rel 15 UEs.<br>Note 2: This UE channel bandwidth is applicable only to downlink.<br>Note 3: This UE channel bandwidth is applicable only to uplink.<br>Note 4: Applicable when for use as single carrier, PCell in CA or PCell in DC configuration.<br>Note 5: Applicable for use as SCell in CA or SCell in DC configuration. |                                   |

|         |  |
|---------|--|
| Note 6: | This Mid test channel bandwidth is applicable to UEs supporting maximum channel bandwidth 20MHz. |
| Note 7: | This Mid test channel bandwidth is applicable to UEs supporting maximum channel bandwidth 50MHz. |
| Note 8: | This Mid test channel bandwidth is chosen since it is more commonly used.                        |

**Table 4.3.0A.1-2: Mid Test Channel bandwidths for each NR band, FR2**

| NR band / UE Mid Test Channel bandwidth |           |
|---|-----------|
| NR Band                                 | Mid [MHz] |
| n257                                    | 200       |
| n258                                    | 200       |
| n260                                    | 200       |
| n261                                    | 200       |

Note 1: For UEs with limited UE channel bandwidth capability, if mid channel BW is not supported by the UE, select the closest channel BW to the average channel BW of all supported channel bandwidths among all SCSs. If there are two channel bandwidths that have same distance to the mathematical center, the higher one is selected. This shall apply only for Rel 15 UEs.

#### 4.3.1.0B Low test channel bandwidth

The low test channel bandwidth definition for RF is given in Table 4.3.1.0B-1 and Table 4.3.1.0B-2 for FR1 and FR2 respectively.

**Table 4.3.1.0B-1: Low Test Channel bandwidths for each NR band, FR1**

| NR band / UE Low Test Channel bandwidth  |             |
|--|-------------|
| NR Band  | Low [MHz]   |
| n1   | 5           |
| n2   | 5           |
| n3   | 5           |
| n5   | 5           |
| n7   | 5           |
| n8   | 5           |
| n12  | 5           |
| n14  | 5           |
| n20  | 5           |
| n25  | 5           |
| n26  | 5           |
| n28  | 5           |
| n29  | $5^2$       |
| n30  | 5           |
| n34  | 5           |
| n38  | 5           |
| n39  | 5           |
| n40  | $5^4, 10^5$ |
| n41  | 10          |
| n48  | $5^4, 10^5$ |
| n50  | $5^4, 10^5$ |
| n51  | 5           |
| n53  | 5           |
| n65  | 5           |
| n66  | 5           |
| n70  | 5           |
| n71  | 5           |
| n74  | 5           |
| n75  | $5^2$       |
| n76  | $5^2$       |
| n77  | 10          |
| n78  | 10          |
| n79  | 40          |
| n80  | $5^3$       |
| n81  | $5^3$       |
| n82  | $5^3$       |
| n83  | $5^3$       |
| n84  | $5^3$       |
| n86  | $5^3$       |
| Note 1: For UEs with limited UE channel bandwidth capability, if the above defined low channel bandwidth is not supported by the UE, select the closest channel bandwidth in both DL and UL. This shall apply only for Rel.15 UEs. |             |
| Note 2: This UE channel bandwidth is applicable only to downlink.  |             |
| Note 3: This UE channel bandwidth is applicable only to uplink.  |             |
| Note 4: Applicable for use as SCell in CA or SCell in DC configuration.  |             |

Note 5: Applicable for use as single carrier, PCell in CA or PCell in DC configuration.

**Table 4.3.1.0B-2: Low Test Channel bandwidths for each NR band, FR2**

| NR band / UE Low Test Channel bandwidth |           |
|---|-----------|
| NR Band                                 | Low [MHz] |
| n257                                    | 50        |
| n258                                    | 50        |
| n260                                    | 50        |
| n261                                    | 50        |

Note 1: For UEs with limited UE channel bandwidth capability, if the above defined low channel bandwidth is not supported by the UE, select the closest channel bandwidth in both DL and UL. This shall apply only for Rel.15 UEs..

#### 4.3.1.0C High test channel bandwidth

The high test channel bandwidth definition for RF is given in Table 4.3.1.0C-1 and Table 4.3.1.0C-2 for FR1 and FR2 respectively.

**Table 4.3.1.0C-1: High Test Channel bandwidths for each NR band, FR1**

| NR band / UE High Test Channel bandwidth  |               |
|---|---------------|
| NR Band   | High [MHz]    |
| n1  | $20^6, 50^7$  |
| n2  | 20            |
| n3  | $30^8, 40^9$  |
| n5  | 20            |
| n7  | $20^6, 50^7$  |
| n8  | 20            |
| n12   | 15            |
| n14   | 10            |
| n20   | 20            |
| n25   | $20^6, 40^9$  |
| n26   | 20            |
| n28   | $20^6, 30^8$  |
| n29   | $10^2$        |
| n30   | 10            |
| n34   | 15            |
| n38   | 20            |
| n39   | 40            |
| n40   | 80            |
| n41   | 100           |
| n48   | $40^3, 100^4$ |
| n50   | 80            |
| n51   | 5             |
| n53   | 10            |
| n65   | 20            |
| n66   | 40            |
| n70   | $15^1/25^2$   |
| n71   | 20            |
| n74   | 20            |
| n75   | $20^2$        |
| n76   | $5^2$         |
| n77   | 100           |
| n78   | 100           |
| n79   | 100           |
| n80   | $30^1$        |
| n81   | $20^1$        |
| n82   | $20^1$        |
| n83   | $20^1$        |
| n84   | $20^1$        |
| n86   | $40^1$        |
| Note 1: This UE channel bandwidth is applicable only to uplink.   |               |
| Note 2: This UE channel bandwidth is applicable only to downlink.   |               |
| Note 3: Applicable for use as single carrier, PCell in CA or PCell in DC configuration.   |               |
| Note 4: Applicable for use as DL SCell in CA or DL SCell in DC configuration.   |               |
| Note 5: For UEs with limited UE channel bandwidth capability, if the above defined high channel bandwidth is not supported by the UE, select the closest channel bandwidth in both DL and UL. This shall apply only for Rel-15 UEs. |               |
| Note 6: This High test channel bandwidth is applicable to UEs supporting maximum channel bandwidth 20MHz.   |               |
| Note 7: This High test channel bandwidth is applicable to UEs supporting maximum channel bandwidth 50MHz.   |               |

- |         |   |
|---------|---|
| Note 8: | This High test channel bandwidth is applicable to UEs supporting maximum channel bandwidth 30MHz. |
| Note 9: | This High test channel bandwidth is applicable to UEs supporting maximum channel bandwidth 40MHz. |

**Table 4.3.1.0C-2: High Test Channel bandwidths for each NR band, FR2**

| NR band / UE High Test Channel bandwidth  |            |
|---|------------|
| NR Band   | High [MHz] |
| n257  | 400        |
| n258  | 400        |
| n260  | 400        |
| n261  | 400        |
| Note 1: For UEs with limited UE channel bandwidth capability, if the above defined high channel bandwidth is not supported by the UE, select the closest channel bandwidth in both DL and UL. This shall apply only for Rel-15 UEs. |            |

#### 4.3.1.0D Bandwidth part

The value of *locationAndBandwidth* in *BWP* for FR1 is given in Table 4.3.1.0D-1. The value of *locationAndBandwidth* in *BWP* for FR2 is given in Table 4.3.1.0D-2.

**Table 4.3.1.0D-1: *locationAndBandwidth* in BWP for FR1**

| <b>BW<br/>[MHz]</b>   | <b>SCS<br/>[kHz]</b> | <b>L_RBs<br/>(MAX N<sub>RB</sub>)</b> | <b>locationAndBandwidth<br/>(Note 1)</b> |
|---|----------------------|---------------------------------------|--|
| 5   | 15                   | 25                                    | 6600                                     |
| 5   | 30                   | 11                                    | 2750                                     |
| 5   | 60                   | N/A                                   | N/A                                      |
| 10  | 15                   | 52                                    | 14025                                    |
| 10  | 30                   | 24                                    | 6325                                     |
| 10  | 60                   | 11                                    | 2750                                     |
| 15  | 15                   | 79                                    | 21450                                    |
| 15  | 30                   | 38                                    | 10175                                    |
| 15  | 60                   | 18                                    | 4675                                     |
| 20  | 15                   | 106                                   | 28875                                    |
| 20  | 30                   | 51                                    | 13750                                    |
| 20  | 60                   | 24                                    | 6325                                     |
| 25  | 15                   | 133                                   | 36300                                    |
| 25  | 30                   | 65                                    | 17600                                    |
| 25  | 60                   | 31                                    | 8250                                     |
| 30  | 15                   | 160                                   | 32174                                    |
| 30  | 30                   | 78                                    | 21175                                    |
| 30  | 60                   | 38                                    | 10175                                    |
| 40  | 15                   | 216                                   | 16774                                    |
| 40  | 30                   | 106                                   | 28875                                    |

Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-1 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdccch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

Note 2: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Table 4.3.1.1.1-2: Test frequencies for NR operating band n1 and SCS 30 kHz

| CBW [MHz] | carrier Bandwidth [PRBs] | Range    |      | Carrier centre [MHz] | Carrier centre [ARFCN] | point A [MHz] | absolute FrequencyPoint A [ARFCN] | offsetTo Carrier [Carrier PRBs] | SS block SCS [kHz] | GSCN | absolute FrequencySSB [ARFCN] | $k_{SSB}$ | Offset Carrier CORE SET#0 Index [RBs] Note 2 | CORE SET#0 Index (Offset [RBs]) Note 1 | offsetTo PointA (SIB1) [PRBs] Note 1 |

| <p>Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-2 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.</p> <p>Note 2: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter <math>\Delta f_{\text{OffsetCORESET-0-Carrier}}</math> in Annex C expressed in number of common RBs.</p> |     |          |      |      |        |         |        |     |    |      |        |    |   |       |      |

Table 4.3.1.1.1-3: Test frequencies for NR operating band n1 and SCS 60 kHz without CORESET#0

| CBW [MHz] | carrierBand width [PRBs] | Range    |      | Carrier centre [MHz] | Carrier centre [ARFCN] | point A [MHz] | absolute FrequencyPoint A [ARFCN] | offsetTo Carrier [PRBs] | SS block SCS [kHz] | GSCN | absolute FrequencySSB [ARFCN] |

| <p>Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-1 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.</p> <p>Note 2: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter <math>\Delta F_{\text{OffsetCORESET-0-Carrier}}</math> in Annex C expressed in number of common RBs.</p> |                          |          |                      |                        |               |                                   |                                 |                    |      |                               |           |  |  |                                     |

| <p>Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-2 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.</p> <p>Note 2: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter <math>\Delta F_{\text{OffsetCORESET-0-Carrier}}</math> in Annex C expressed in number of common RBs.</p> |                          |          |      |                      |                        |               |                                   |                                 |                    |      |                               |           |                                       |                                       |                                     |

| Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-1 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdccch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2. |     |          |      |        |        |         |        |     |    |      |        |   |   |       |     |   |   |  |  |  |
| Note 2: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter $\Delta F_{\text{OffsetCORESET-0-Carrier}}$ in Annex C expressed in number of common RBs.  |     |          |      |        |        |         |        |     |    |      |        |   |   |       |     |   |   |  |  |  |

| Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-2 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdccch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2. |  |      |        |        |         |        |   |   |   |   |   |   |   |
| Note 2: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter $\Delta f_{\text{OffsetCORESET-0-Carrier}}$ in Annex C expressed in number of common RBs.  |  |      |        |        |         |        |   |   |   |   |   |   |   |

Table 4.3.1.1.1.3-3: Test frequencies for NR operating band n3 and SCS 60 kHz without CORESET#0

| Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-1 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2. |                          |          |                      |                        |               |                                   |                                 |                    |      |                               |           |                                |                                       |                                     |     |  |  |
| Note 2: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter $\Delta F_{\text{OffsetCORESET-0-Carrier}}$ in Annex C expressed in number of common RBs.   |                          |          |                      |                        |               |                                   |                                 |                    |      |                               |           |                                |                                       |                                     |     |  |  |

"Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-4 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

Note 2: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

## 4.3.1.1.6 FFS

## 4.3.1.1.7 Reference test frequencies for NR operating band n7

Table 4.3.1.1.7-1: Test frequencies for NR operating band n7 and SCS 15 kHz

| CBW [MHz]   | carrier Bandwidth [PRBs] | Range    | Carrier centre [MHz] | Carrier centre [ARFCN] | point A [MHz] | absolute FrequencyPoint A [ARFCN] | offsetTo Carrier [Carrier PRBs] | SS block SCS [kHz] | GSCN | absolute FrequencySSB [ARFCN] | $k_{SSB}$ | Offset Carrier CORESET#0 [RBs] | CORESET#0 Index (Offset [RBs]) Note 2 | offsetToPointA (SIB1) [PRBs] Note 1 |  |  |  |

| Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-1 in TS 38.213 [22]. The value of CORESET#0 Index is controlResourceSetZero (pdccch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2. |                          |          |                      |                        |               |                                   |                                 |                    |      |                               |           |                                |                                       |                                     |  |  |  |
| Note 2: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter $\Delta F_{\text{OffsetCORESET-0-Carrier}}$ in Annex C expressed in number of common RBs.   |                          |          |                      |                        |               |                                   |                                 |                    |      |                               |           |                                |                                       |                                     |  |  |  |

| <p>Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-2 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.</p> <p>Note 2: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter <math>\Delta F_{\text{OffsetCORESET-0-Carrier}}</math> in Annex C expressed in number of common RBs.</p> |                          |          |      |                      |                        |               |                                   |                                 |                    |      |                               |           |                                       |                                       |                                     |

Table 4.3.1.1.7-3: Test frequencies for NR operating band n7 and SCS 60 kHz without CORESET#0

Note: FR1 carrier without CORESET#0 is indicated in the MIB by setting  $k_{SSB} = 31$ ,  $controlResourceSetZero = 0$  and  $searchSpaceZero = 0$  (TS 38.213 [22], clause 13).

## 4.3.1.1.1.8

Reference test frequencies for NR operating band n8

Table 4.3.1.1.8-1: Test frequencies for NR operating band n8 and SCS 15 kHz

| CBW [MHz]   | carrier Bandwidth [PRBs] | Range    | Carrier centre [MHz] | Carrier centre [ARFCN] | point A [MHz] | absolute FrequencyPoint A [ARFCN] | offsetTo Carrier [Carrier PRBs] | SS block SCS [kHz] | GSCN | absolute FrequencySSB [ARFCN] | $k_{SSB}$ | Offset Carrier CORE SET#0 [RBs] | CORE SET#0 Index (Offset [RBs]) Note 2 | Offset To PointA (SIB1) [PRBs] Note 1 |     |  |  |

| Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-1 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2. |                          |          |                      |                        |               |                                   |                                 |                    |      |                               |           |                                 |  |                                       |     |  |  |
| Note 2: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter $\Delta F_{\text{OffsetCORESET-0-Carrier}}$ in Annex C expressed in number of common RBs.   |                          |          |                      |                        |               |                                   |                                 |                    |      |                               |           |                                 |  |                                       |     |  |  |

| <p>Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-2 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.</p> <p>Note 2: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter <math>\Delta F_{\text{OffsetCORESET-0-Carrier}}</math> in Annex C expressed in number of common RBs.</p> |                          |          |      |                      |                        |               |                                   |                                 |                    |      |                               |           |                                       |                                       |                                     |

Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-1 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcchConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

Note 2: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET0Carrier}}$  in Annex C expressed in number of common RBs.

Table 4.3.1.1.14-2: Test frequencies for NR operating band n14 and SCS 30 kHz

| Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-1 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2. |                          |          |                      |                        |               |                                   |                                 |                    |      |                               |           |                                |                                       |                                     |     |  |  |
| Note 2: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter $\Delta F_{\text{OffsetCORESET-0-Carrier}}$ in Annex C expressed in number of common RBs.   |                          |          |                      |                        |               |                                   |                                 |                    |      |                               |           |                                |                                       |                                     |     |  |  |

| <p>Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-2 in TS 38.213 [22]. The value of CORESET#0 Index is signalled controlResourceSetZero (pdcch-ConfigSIB1 in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.</p> <p>Note 2: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter <math>\Delta F_{\text{OffsetCORESET-0-Carrier}}</math> in Annex C expressed in number of common RBs.</p> |                          |          |      |                      |                        |               |                                   |                                 |                    |      |                               |           |                                       |                                       |                                     |

## 4.3.1.1.1.21 to 4.3.1.1.1.24 FFS

## 4.3.1.1.1.25 Reference test frequencies for NR operating band n25

| Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-1 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2. |                          |          |                      |                        |               |                                   |                                 |                    |      |                               |           |                                |                                       |                                     |  |  |  |
| Note 2: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter $\Delta F_{\text{OffsetCORESET-0-Carrier}}$ in Annex C expressed in number of common RBs.   |                          |          |                      |                        |               |                                   |                                 |                    |      |                               |           |                                |                                       |                                     |  |  |  |

| <p>Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-2 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.</p> <p>Note 2: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter <math>\Delta F_{\text{OffsetCORESET-0-Carrier}}</math> in Annex C expressed in number of common RBs.</p> |                          |          |      |                      |                        |               |                                   |                                 |                    |      |                               |           |                                       |                                       |                                     |

|           |                                 |          | High | 1905                 | 381000                 | 1892.04       | 378408                                   | 6                              |                    | -    | -                                    |

Note: FR1 carrier without CORESET#0 is indicated in the MIB by setting  $k_{SSB} = 31$ ,  $controlResourceSetZero = 0$  and  $searchSpaceZero = 0$  (TS 38.213 [22], clause 13).

## 4.3.1.1.1.26

## Reference test frequencies for NR operating band n26

Table 4.3.1.1.1.26-1: Test frequencies for NR operating band n26 and SCS 15 kHz

| CBW [MHz]   | carrier Bandwidth [PRBs] | Range    | Carrier centre [MHz] | Carrier centre [ARFCN] | point A [MHz] | absolute FrequencyPoint A [ARFCN] | offsetTo Carrier [Carrier PRBs] | SS block SCS [kHz] | GSCN | absolute FrequencySSB [ARFCN] | $k_{SSB}$ | Offset carrier CORE SET#0 Index (Offset [RBs]) Note 2 | CORE SET#0 Index (Offset [RBs]) Note 1 | offsetToPointA (SIB1) [PRBs] Note 1 |     |  |  |
|---|--------------------------|----------|----------------------|------------------------|---------------|-----------------------------------|---------------------------------|--------------------|------|-------------------------------|-----------|---|--|-------------------------------------|-----|--|--|

- Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-1 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.
- Note 2: Carrier centre frequency moved for Mid Range and CBW=20 MHz due to Note 7 in TS 38.101-1 [7], Table 5.3.5-1.
- Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.
- Note 4: No carrier centre frequency specified for Mid Range and CBW=30 MHz due to Note 7 in TS 38.101-1 [7], Table 5.3.5-1.

Table 4.3.1.1.1.28-2: Test frequencies for NR operating band n28 and SCS 30 kHz

Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-1 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

Note 2: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-1 for SSB\_SCS = 15kHz and Table 13-3 for SSB\_SCS=30kHz in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

Note 2: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

| <p>Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-4 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdccch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.</p> <p>Note 2: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter <math>\Delta F_{\text{OffsetCORESET-0-Carrier}}</math> in Annex C expressed in number of common RBs.</p> |                          |                   |      |                      |                        |               |                                   |                                 |                    |      |                               |           |   |  |                                     |

| <p>Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-1 for SSB_SCS = 15kHz and Table 13-3 for SSB_SCS=30kHz in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdccch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.</p> <p>Note 2: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter <math>\Delta F_{\text{OffsetCORESET-0-Carrier}}</math> in Annex C expressed in number of common RBs.</p> |                          |                   |      |                      |                        |               |                                   |                                 |                    |        |                               |           |  |  |                                     |

Note: FR1 carrier without CORESET#0 is indicated in the MIB by setting  $k_{SSB} = 31$ ,  $controlResourceSetZero=0$  and  $searchSpaceZero = 0$  (TS 38.213 [22], clause 13).

## 4.3.1.1.1.40

Reference test frequencies for NR operating band n40

Table 4.3.1.1.1.40-1: Test frequencies for NR operating band n40 and SCS 15 kHz

| CBW [MHz]   | carrier Bandwidth [PRBs] | Range             |      | Carrier centre [MHz] | Carrier centre [ARFCN] | point A [MHz] | absolute FrequencyPoint A [ARFCN] | offsetTo Carrier [Carrier PRBs] | SS block SCS [kHz] | GSCN | absolute FrequencySSB [ARFCN] | $k_{SSB}$ | Offset Carrier CORE SET#0 Index (Offset [RBs]) Note 2 | CORE SET#0 Index (Offset [RBs]) Note 1 | offsetToPointA (SIB1) [PRBs] Note 1 |

| <p>Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-1 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.</p> <p>Note 2: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter <math>\Delta F_{\text{OffsetCORESET-0-Carrier}}</math> in Annex C expressed in number of common RBs.</p> <p>Note 3: No SS/PBCH block fits within the channel bandwidth. The channel bandwidth can only be used as SCell</p> |                          |                   |      |                      |                        |               |                                   |                                 |                    |      |                               |           |   |  |                                     |

Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-2 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

Note 2: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Table 4.3.1.1.140-3: Test frequencies for NR operating band n40 and SCS 60 kHz without CORESET#0

| CBW [MHz] | carrierBand width [PRBs] | Range             |      | Carrier centre [MHz] | Carrier centre [ARFCN] | point A [MHz] | absolute FrequencyPoint A [ARFCN] | offsetTo Carrier [PRBs] | SS block SCS [kHz] | GSCN | absolute FrequencySSB [ARFCN] |

Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-1 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdccch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

Note 2: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Table 4.3.1.1.41-2: Test frequencies for NR operating band n41, SCS 30 kHz and  $\Delta F_{\text{Raster}}$  30 kHz

| <p>Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-4 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.</p> <p>Note 2: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter <math>\Delta F_{\text{OffsetCORESET-0-Carrier}}</math> in Annex C expressed in number of common RBs.</p> |                          |                   |      |                      |                        |               |                                   |                                 |                    |      |                               |                  |  |  |                                     |

Table 4.3.1.1.41-3: Test frequencies for NR operating band n41, SCS 60 kHz and  $\Delta F_{\text{Raster}} = 15 \text{ kHz}$  without CORESET#0

| <p>Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-3 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdccch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.</p> <p>Note 2: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter <math>\Delta F_{\text{OffsetCORESET-0-Carrier}}</math> in Annex C expressed in number of common RBs.</p> <p>Note 3: No SS/PBCH block fits within the channel bandwidth. The channel bandwidth can only be used as SCell.</p> |                          |                   |      |                      |                        |               |                                   |                                 |                    |      |                               |           |                                       |                                       |                                     |

Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-4 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdccch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

Note 2: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Table 4.3.1.1.1.48-3: Test frequencies for NR operating band n48 and SCS 60 kHz without CORESET#0

| <p>Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-1 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.</p> <p>Note 2: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter <math>\Delta F_{\text{OffsetCORESET-0-Carrier}}</math> in Annex C expressed in number of common RBs.</p> <p>Note 3: No SS/PBCH block fits within the channel bandwidth. The channel bandwidth can only be used as SCell</p> |                                 |                   |      |                             |                               |                      |  |  |                           |             |                                      |                             |   |  |  |

Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-2 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

Note 2: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Note 3: This UE channel bandwidth is applicable only to downlink (TS 38.101-1 table 5.3.5-1).

Table 4.3.1.1.150-3: Test frequencies for NR operating band n50 and SCS 60 kHz without CORESET#0

| CBW [MHz]      | carrierBand width [PRBs] | Range             |      | Carrier centre [MHz] | Carrier centre [ARFCN] | point A [MHz] | absoluteFrequencyPointA [ARFCN] | offsetTo Carrier [PRBs] | SS block SCS [kHz] | GSCN | absolute FrequencySSB [ARFCN] |

Note: FR1 carrier without CORESET#0 is indicated in the MIB by setting  $k_{SSB} = 31$ ,  $controlResourceSetZero=0$  and  $searchSpaceZero = 0$  (TS 38.213 [22], clause 13).

Note 2: This UE channel bandwidth is applicable only to downlink (TS 38.101-1 table 5.3.5-1).

## 4.3.1.1.1.51 Reference test frequencies for NR operating band n51

**Table 4.3.1.1.51-1: Test frequencies for NR operating band n51 and SCS 15 kHz**

| [MHz] | <i>carrier Bandwidth [PRBs]</i> | Range             |      | Carrier centre [MHz] | Carrier centre [ARFCN] | point A [MHz] | <i>absolute FrequencyPoint A [ARFCN]</i> | <i>offsetTo Carrier [Carrier PRBs]</i> | SS block SCS [kHz] | GSCN | <i>absolute FrequencySSB [ARFCN]</i> | $k_{SSB}$ | Offset Carrier CORE SET#0 [RBs] Note 2 | CORE SET#0 Index (Offset [RBs]) Note 1 | <i>offsetToPointA (SIB1) [PRBs]</i> Note 1 |
|-------|---------------------------------|-------------------|------|----------------------|------------------------|---------------|--|--|--------------------|------|--------------------------------------|-----------|--|--|--|
| 5     | 25                              | Downlink & Uplink | Low  | 1429.5               | 285900                 | 1336.53       | 267306                                   | 504                                    | 15                 | 3573 | 285870                               | 8         | 1                                      | 0 (0)                                  | 505  |
|       |                                 |                   | Mid  |                      |                        |               |  |  |                    |      |                                      |           |  |  |  |
|       |                                 |                   | High |                      |                        |               |  |  |                    |      |                                      |           |  |  |  |

Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-1 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

Note 2: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

| Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-1 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdccch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2. |                          |          |                      |                        |               |                                   |                                 |                    |      |                               |           |                                |                                       |                                     |  |  |  |
| Note 2: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter $\Delta F_{OffsetCORESET-0-Carrier}$ in Annex C expressed in number of common RBs.   |                          |          |                      |                        |               |                                   |                                 |                    |      |                               |           |                                |                                       |                                     |  |  |  |

| <p>Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-2 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdccch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.</p> <p>Note 2: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter <math>\Delta F_{\text{OffsetCORESET-0-Carrier}}</math> in Annex C expressed in number of common RBs.</p> |                          |          |      |                      |                        |               |                                   |                                 |                    |      |                               |           |  |  |                                     |

Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-1 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

Note 2: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter

$\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

**Table 4.3.1.1.166-1A: Test frequencies for NR operating band n66 and asymmetric channel bandwidth combination set 1, uplink and downlink channel bandwidth combination and SCS 15 kHz**

Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-1 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

Note 2: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Table 4.3.1.1.1.66-2: Test frequencies for NR operating band n66, uplink and downlink channel bandwidth combinations and SCS 30 kHz

Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-2 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

Note 2: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{OffsetCORESET-0-Carrier}$  in Annex C expressed in number of common RBs.

**Table 4.3.1.1.66-2A: Test frequencies for NR operating band n66 asymmetric channel bandwidth combination set 1, uplink and downlink channel bandwidth combination and SCS 15 kHz**

Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-2 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

Note 2: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{OffsetCORESET-0-Carrier}$  in Annex C expressed in number of common RBs.

**Table 4.3.1.1.66-3: Test frequencies for NR operating band n66, uplink and downlink channel bandwidth combinations and SCS 60 kHz without CORESET#0**

| UL/DL Bandwidth combination | CBW [MHz] | carrier Bandwidth [PRBs] | Range    | Carrier centre [MHz] | Carrier centre [ARFCN] | point A [MHz] | absoluteFrequencyPointA [ARFCN] | offsetToCarrier [Carrier PRBs] | SS block SCS [kHz] | GSCN | absolute FrequencySSB [ARFCN] |
|-----------------------------|-----------|--------------------------|----------|----------------------|------------------------|---------------|---------------------------------|--------------------------------|--------------------|------|-------------------------------|

Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-1 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

Note 2: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

**Table 4.3.1.1.70-2: Test frequencies for NR operating band n70, default Tx-RX frequency separation 300MHz, uplink and downlink channel bandwidth combinations and SCS 30 kHz**

- Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-2 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1 in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.
- Note 2: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

**Table 4.3.1.1.70-3: Test frequencies for NR operating band n70, default Tx-RX frequency separation 300MHz, uplink and downlink channel bandwidth combinations and SCS 60 kHz without CORESET#0**

| <p>Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-1 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdccch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.</p> <p>Note 2: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter <math>\Delta F_{\text{OffsetCORESET-0-Carrier}}</math> in Annex C expressed in number of common RBs.</p> |                          |          |                      |                        |               |                                   |                                 |                    |      |                               |           |   |  |                                     |     |

| <p>Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-2 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.</p> <p>Note 2: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter <math>\Delta F_{\text{OffsetCORESET-0-Carrier}}</math> in Annex C expressed in number of common RBs.</p> |                          |          |      |                      |                        |               |                                   |                                 |                    |      |                               |           |                                       |                                       |                                     |

| Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-1 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2. |                          |          |                      |                        |               |                                   |                                 |                    |      |                               |           |                                |                                       |                                     |     |  |  |
| Note 2: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the   |                          |          |                      |                        |               |                                   |                                 |                    |      |                               |           |                                |                                       |                                     |     |  |  |

parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

| <p>Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-2 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1 in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.</p> <p>Note 2: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter <math>\Delta F_{\text{OffsetCORESET-0-Carrier}}</math> in Annex C expressed in number of common RBs.</p> |                          |          |      |                      |                        |               |                                   |                                 |                    |      |                               |                  |  |  |                                     |

- Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-3 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.
- Note 2: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Table 4.3.1.1.77-2: Test frequencies for NR operating band n77, SCS 30 kHz and  $\Delta F_{\text{Raster}}$  30 kHz

| Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-4 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2. |  |        |      |         |        |         |        |     |      |        |   |   |       |      |
| Note 2: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter $\Delta f_{\text{OffsetCORESET-0-Carrier}}$ in Annex C expressed in number of common RBs.   |  |        |      |         |        |         |        |     |      |        |   |   |       |      |

Table 4.3.1.1.77-3: Test frequencies for NR operating band n77, SCS 60 kHz and  $\Delta F_{\text{Raster}}$  30 kHz without CORESET#0

Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-3 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

Note 2: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Table 4.3.1.1.78-2: Test frequencies for NR operating band n78, SCS 30 kHz and  $\Delta F_{\text{Raster}}$  30 kHz

| Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-4 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2. |  |        |      |      |        |         |        |     |      |        |   |   |       |      |
| Note 2: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter $\Delta f_{\text{OffsetCORESET-0-Carrier}}$ in Annex C expressed in number of common RBs.   |  |        |      |      |        |         |        |     |      |        |   |   |       |      |

Table 4.3.1.1.78-3: Test frequencies for NR operating band n78, SCS 60 kHz and  $\Delta F_{\text{Raster}}$  30 kHz without CORESET#0.

| CBW [MHz] | carrierBand width [PRBs] | Range             |      | Carrier centre [MHz] | Carrier centre [ARFCN] | point A [MHz] | absoluteFrequencyPointA [ARFCN] | offsetToCarrier [PRBs] | SS block SCS [kHz] | GSCN | absolute FrequencySSB [ARFCN] |

| Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-5 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdccch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2. |                                 |                   |      |                             |                               |                      |  |  |                           |             |                                      |                                    |  |   |  |  |  |
| Note 2: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter $\Delta F_{\text{OffsetCORESET-0-Carrier}}$ in Annex C expressed in number of common RBs.  |                                 |                   |      |                             |                               |                      |  |  |                           |             |                                      |                                    |  |   |  |  |  |

| <p>Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-6 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.</p> <p>Note 2: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter <math>\Delta F_{\text{OffsetCORESET-0-Carrier}}</math> in Annex C expressed in number of common RBs.</p> |                          |                   |      |                      |                        |               |                                   |                                 |                    |      |                               |                  |  |  |                                     |

Table 4.3.1.1.79-3: Test frequencies for NR operating band n79, SCS 60 kHz and  $\Delta F_{\text{Raster}}$  30 kHz without CORESET#0.

Note 1: Corresponds to nominal channel spacing in accordance with TS 38.101-1 [7], clause 5.4A.1 for the CC1 and CC2 channel bandwidth combination.

Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.

Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-4 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

Table 4.3.1.1.3.40.1-2: NR Intra-Band contiguous CA configuration CA\_n40B (PCC=CC1 and SCC=CC2), CC1 SCS = 30kHz, CC2 SCS = 30kHz

Note 1: Corresponds to nominal channel spacing in accordance with TS 38.101-1 [7], clause 5.4A.1 for the CC1 and CC2 channel bandwidth combination.

Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.

Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-4 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

## 4.3.1.1.3.41

## NR Intra-band contiguous configurations CA\_n41

## 4.3.1.1.3.41.1 CA\_n41C

Editor's note: Test frequencies for CA\_n41C with mixed numerology with SCS CC1=15 kHz and SCS CC2=30 kHz or 60 kHz; and SCS CC1=30 kHz and SCS CC2= 30 kHz or 60kHz is FFS.

Table 4.3.1.1.3.41.1-1: NR Intra-Band contiguous CA configuration CA\_n41C (PCC=CC1 and SCC=CC2), CC1 SCS = 30kHz, CC2 SCS = 30 kHz

Note 1: Corresponds to nominal channel spacing in accordance with TS 38.101-1 [7], clause 5.4A.1 for the CC1 and CC2 channel bandwidth combination.

Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.

Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-4 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

4.3.1.1.3.42 – 4.3.1.1.3.65 FFS

4.3.1.1.3.66 NR Intra-band contiguous configurations CA\_n66

4.3.1.1.3.66.1 CA\_n66B

Editor's note: Test frequencies for CA\_n66B with mixed numerology with SCS CC1=15kHz and SCS CC2=30 kHz or 60kHz; and SCS CC1=30kHz and SCS CC2=15 kHz or 60 kHz is FFS.

Table 4.3.1.1.3.66.1-1: NR Intra-Band contiguous CA configuration CA\_n66B (PCC=CC1 and SCC=CC2), SCS 15 kHz

Note 1: Corresponds to nominal channel spacing in accordance with TS 38.101-1 [7], clause 5.4A.1 for the CC1 and CC2 channel bandwidth combination.

Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.

Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-1 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

Table 4.3.1.1.3.66.1-2: NR Intra-Band contiguous CA configuration CA\_n66B (PCC=CC1 and SCC=CC2), SCS 30 kHz

|   |  |  |  |  |      |        |        |         |        |     |   |   |   |   |   |   |
|---|--|--|--|--|------|--------|--------|---------|--------|-----|---|---|---|---|---|---|
|   |  |  |  |  | Mid  | 1764.3 | 352860 | 1578.54 | 315708 | 504 | - | - | - | - | - | - |
|   |  |  |  |  | High | 1775   | 355000 | 1768.52 | 353704 | 6   | - | - | - | - | - | - |
| Note 1: Corresponds to nominal channel spacing in accordance with TS 38.101-1 [7], clause 5.4A.1 for the CC1 and CC2 channel bandwidth combination.   |  |  |  |  |      |        |        |         |        |     |   |   |   |   |   |   |
| Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.  |  |  |  |  |      |        |        |         |        |     |   |   |   |   |   |   |
| Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter $\Delta F_{\text{OffsetCORESET-0-Carrier}}$ in Annex C expressed in number of common RBs.   |  |  |  |  |      |        |        |         |        |     |   |   |   |   |   |   |
| Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-2 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2. |  |  |  |  |      |        |        |         |        |     |   |   |   |   |   |   |

#### 4.3.1.1.3.67 – 4.3.1.1.3.77 FFS

4.3.1.1.3.78 NR Intra-band contiguous configurations CA\_n78

4.3.1.1.3.78.1 CA\_n78C

Editor's note: Test frequencies for CA\_n78C with mixed numerology with SCS CC1=15kHz and SCS CC2=30 kHz or 60kHz; and SCS CC1=30kHz and SCS CC2=15 kHz or 60 kHz is FFS.

Note 1: Corresponds to nominal channel spacing in accordance with TS 38.101-1 [7], clause 5.4A.1 for the CC1 and CC2 channel bandwidth combination.

Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.

Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-4 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

## 4.3.1.1.3.78.2 CA\_n78B

Editor's note: Test frequencies for CA\_n78B with mixed numerology with SCS CC1=15kHz and SCS CC2=30 kHz or 60kHz; and SCS CC1=30kHz and SCS CC2=15 kHz or 60 kHz is FFS.

Table 4.3.1.1.3.78.2-1: NR Intra-Band contiguous CA configuration CA\_n78B (PCC=CC1 and SCC=CC2), SCS 15 kHz and  $\Delta F_{\text{Raster}} = 15 \text{ kHz}$

Note 1: Corresponds to nominal channel spacing in accordance with TS 38.101-1 [7], clause 5.4A.1 for the CC1 and CC2 channel bandwidth combination.

Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.

Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-4 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

Table 4.3.1.1.3.78.2-2: NR Intra-Band contiguous CA configuration CA\_n78B (PCC=CC1 and SCC=CC2), SCS 30 kHz and  $\Delta F_{\text{Raster}}$  30 kHz

Note 1: Corresponds to nominal channel spacing in accordance with TS 38.101-1 [7], clause 5.4.1 for the CC1 and CC2 channel bandwidth combination.

Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.

Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-4 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

4.3.1.1.4      Void

4.3.1.1.5      NR intra-band non-contiguous CA configurations in FR1

4.3.1.1.5.1 – 4.3.1.1.5.65 FFS

4.3.1.1.5.66      CA\_n66(2A)

Editor's note: Test frequencies for CA\_n66(2A) with mixed numerology with SCS CC1=15kHz and SCS CC2=30 kHz or 60kHz; and SCS CC1=30kHz and SCS CC2=15 kHz or 60 kHz is FFS.

Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-8 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdccch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

Note 2: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

## 4.3.1.2.1.2

Reference test frequencies for NR operating band n258

Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-8 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdccch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

Note 2: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

## 4.3.1.2.1.3

Reference test frequencies for NR operating band n259

Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-8 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdccch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

Note 2: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

## 4.3.1.2.1.4

Reference test frequencies for NR operating band n260

Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-8 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdccch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

Note 2: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

##### 4.3.1.2.3.1 NR Intra-band contiguous CA configurations for CA\_n257

###### 4.3.1.2.3.1.1 CA\_n257B

Editor's note: CBW=400 MHz for NR band n257 is only supported by for SCS 120kHz. Test frequencies for CA\_n257B are currently limited to SCS 120kHz for all CCs.  
Test frequencies for mixed numerologies between CCs is FFS.

Note 1: Corresponds to nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4.A.1 for the CC1 and CC2 channel bandwidth combination.

Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.

Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter

$\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-8 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

#### 4.3.1.2.3.1.2 CA\_n257C

Editor's note: CBW=400 MHz for NR band n257 is only supported by for SCS 120kHz. Test frequencies for CA\_n257C are currently limited to SCS 120kHz for all CCs.

Test frequencies for mixed numerologies between CCs is FFS.

Table 4.3.1.2.3.1.2-1: NR Intra-Band contiguous CA configuration CA\_n257C, SCS=120 kHz,  $\Delta F_{\text{Raster}} = 120 \text{ kHz}$

Note 1: Corresponds to nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4A.1 for the CC1-CC2 and CC2-CC3 channel bandwidth combinations.

Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.

Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-8 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

Note 1: Corresponds to nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4.A.1 for the CC1 and CC2 channel bandwidth combination.

Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.

Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-7 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

Table 4.3.1.2.3.1.3-2: NR Intra-Band contiguous CA configuration CA\_n257D, SCS=120 kHz,  $\Delta F_{\text{Raster}} = 120 \text{ kHz}$

Note 1: Corresponds to nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4A.1 for the CC1 and CC2 channel bandwidth combination.

Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.

Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-8 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

- Note 1: Corresponds to nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4A.1 for the channel bandwidths of the two respective NR component carriers.
- Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.
- Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.
- Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-7 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

Table 4.3.1.2.3.1.6-3: NR Intra-Band contiguous CA configuration CA\_n257G, SCS=120 kHz,  $\Delta F_{\text{Raster}}$  120 kHz, adjusted channel spacing (default)

|                 |           |           |           |                          |                   | High                                       | 29449.92               | 2103331       | 28676.64                          | 2090443                        | 504                |      | 22555                         | 2102779          | 0                                      | 0                                      | 0 (0)                               | 1008 |

Note 1: The adjusted channel spacing is a multiple of subcarrier spacing applicable for both scs=60 kHz and scs=120 kHz and less than the nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4A.1 for the channel bandwidths of the two respective NR component carriers.

Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.

Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-7 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

|                 |  |           |           |                          |                   | High | 29449.92                    | 2103331                | 28676.64      | 2090443                           | 504                            |                    | 22555 | 2102779                       | 0                | 0                                     | 0 (0)                                  | 1008                                   |                                     |  |  |  |
| Note 1:         | Corresponds to nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4A.1 for the channel bandwidths of the two respective NR component carriers.   |           |           |                          |                   |      |                             |                        |               |                                   |                                |                    |       |                               |                  |                                       |  |  |                                     |  |  |  |
| Note 2:         | CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.   |           |           |                          |                   |      |                             |                        |               |                                   |                                |                    |       |                               |                  |                                       |  |  |                                     |  |  |  |
| Note 3:         | The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter $\Delta F_{\text{OffsetCORESET-0-Carrier}}$ in Annex C expressed in number of common RBs.  |           |           |                          |                   |      |                             |                        |               |                                   |                                |                    |       |                               |                  |                                       |  |  |                                     |  |  |  |
| Note 4:         | The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-8 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdccch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2. |           |           |                          |                   |      |                             |                        |               |                                   |                                |                    |       |                               |                  |                                       |  |  |                                     |  |  |  |

Note 1: The adjusted channel spacing is a multiple of subcarrier spacing applicable for both scs=60 kHz and scs=120 kHz and less than the nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4A.1 for the channel bandwidths of the two respective NR component carriers.

Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.

Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-7 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

**Table 4.3.1.2.3.1.7-2: NR Intra-Band contiguous CA configuration CA\_n257H, SCS=60 kHz,  $\Delta F_{\text{Raster}} = 60 \text{ kHz}$ , nominal channel spacing (for ACLR, ACS, IBB Testing)**

Note 1: The adjusted channel spacing is a multiple of subcarrier spacing applicable for both scs=60 kHz and scs=120 kHz and less than the nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4A.1 for the channel bandwidths of the two respective NR component carriers.

Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.

Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-8 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdccch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

**Table 4.3.1.2.3.1.7-4: NR Intra-Band contiguous CA configuration CA\_n257H, SCS=120 kHz,  $\Delta F_{\text{Raster}} = 120$  kHz, nominal channel spacing (for ACLR, ACS, IBB Testing)**

Note 1: Corresponds to nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4A.1 for the channel bandwidths of the two respective NR component carriers.

Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.

Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-8 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdccch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

|                  |  |           |           |                          |                   | High | 29449.92                    | 2103331                | 29039.52      | 2096491                           | 504                            |                    | 22555 | 2102779                       | 0                | 0                                      | 0 (0)                                 | 504                                 |

Note 1: The adjusted channel spacing is a multiple of subcarrier spacing applicable for both scs=60 kHz and scs=120 kHz and less than the nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4A.1 for the channel bandwidths of the two respective NR component carriers.

Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.

Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-7 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

**Table 4.3.1.2.3.1.8-2: NR Intra-Band contiguous CA configuration CA\_n257I, SCS=60 kHz,  $\Delta F_{\text{Raster}}$  60 kHz, nominal channel spacing (for ACLR, ACS, IBB Testing)**

Note 1: Corresponds to nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4A.1 for the channel bandwidths of the two respective NR component carriers.

Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.

Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-7 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

Table 4.3.1.2.3.1.8-3: NR Intra-Band contiguous CA configuration CA\_n257I, SCS=120 kHz,  $\Delta F_{\text{Raster}}$  120 kHz, adjusted channel spacing (default)

Note 1: The adjusted channel spacing is a multiple of subcarrier spacing applicable for both scs=60 kHz and scs=120 kHz and less than the nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4A.1 for the channel bandwidths of the two respective NR component carriers.

Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.

Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-8 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdccch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

**Table 4.3.1.2.3.1.8-4: NR Intra-Band contiguous CA configuration CA\_n257I, SCS=120 kHz,  $\Delta F_{\text{Raster}}$  120 kHz nominal channel spacing (for ACLR, ACS, IBB Testing)**

Note 1: Corresponds to nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4A.1 for the channel bandwidths of the two respective NR component carriers.

Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.

Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-8 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

Note 1: The adjusted channel spacing is a multiple of subcarrier spacing applicable for both scs=60 kHz and scs=120 kHz and less than the nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4A.1 for the channel bandwidths of the two respective NR component carriers.

Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.

Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-7 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

**Table 4.3.1.2.3.1.9-2: NR Intra-Band contiguous CA configuration CA\_n257J, SCS=60 kHz,  $\Delta F_{\text{Raster}}$  60 kHz, nominal channel spacing (for ACLR, ACS, IBB Testing)**

Note 1: Corresponds to nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4A.1 for the channel bandwidths of the two respective NR component carriers.

Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.

Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-7 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

Table 4.3.1.2.3.1.9-3: NR Intra-Band contiguous CA configuration CA\_n257J, SCS=120 kHz,  $\Delta F_{\text{Raster}}$  120 kHz, adjusted channel spacing (default)

| Note 1:                                    | Corresponds to nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4A.1 for the channel bandwidths of the two respective NR component carriers.  |           |           |                          |                   |                             |                               |                               |                                   |                                |                    |      |                               |                               |  |                                       |                                     |                   |
| Note 2:                                    | CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.  |           |           |                          |                   |                             |                               |                               |                                   |                                |                    |      |                               |                               |  |                                       |                                     |                   |
| Note 3:                                    | The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter $\Delta F_{\text{OffsetCORESET-0-Carrier}}$ in Annex C expressed in number of common RBs.   |           |           |                          |                   |                             |                               |                               |                                   |                                |                    |      |                               |                               |  |                                       |                                     |                   |
| Note 4:                                    | The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-8 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2. |           |           |                          |                   |                             |                               |                               |                                   |                                |                    |      |                               |                               |  |                                       |                                     |                   |

Note 1: The adjusted channel spacing is a multiple of subcarrier spacing applicable for both scs=60 kHz and scs=120 kHz and less than the nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4A.1 for the channel bandwidths of the two respective NR component carriers.

Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.

Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-7 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdccch-

ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

**Table 4.3.1.2.3.1.10-2: NR Intra-Band contiguous CA configuration CA\_n257K, SCS=60 kHz,  $\Delta F_{\text{Raster}}$  60 kHz, nominal channel spacing (for ACLR, ACS, IBB Testing)**

Note 1: Corresponds to nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4A.1 for the channel bandwidths of the two respective NR component carriers.

Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.

Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-7 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdccch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

Table 4.3.1.2.3.1.10-3: NR Intra-Band contiguous CA configuration CA\_n257K, SCS=120 kHz,  $\Delta F_{\text{Raster}}$  120 kHz, adjusted channel spacing (default)

Note 1: The adjusted channel spacing is a multiple of subcarrier spacing applicable for both scs=60 kHz and scs=120 kHz and less than the nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4A.1 for the channel bandwidths of the two respective NR component carriers.

Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.

Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-8 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

**Table 4.3.1.2.3.1.10-4: NR Intra-Band contiguous CA configuration CA\_n257K, SCS=120 kHz,  $\Delta F_{\text{Raster}} = 120 \text{ kHz}$ , nominal channel spacing (for ACLR, ACS, IBB Testing)**

Note 1: Corresponds to nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4A.1 for the channel bandwidths of the two respective NR component carriers.

Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.

Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-8 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

## 4.3.1.2.3.1.11 CA\_n257L

Table 4.3.1.2.3.1.11-1: NR Intra-Band contiguous CA configuration CA\_n257L, SCS=60 kHz,  $\Delta F_{\text{Raster}}$  60 kHz, adjusted channel spacing (default)

Note 1: The adjusted channel spacing is a multiple of subcarrier spacing applicable for both scs=60 kHz and scs=120 kHz and less than the nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4A.1 for the channel bandwidths of the two respective NR component carriers.

- Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.
- Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.
- Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-7 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

**Table 4.3.1.2.3.1.11-2: NR Intra-Band contiguous CA configuration CA\_n257L, SCS=60 kHz,  $\Delta F_{\text{Raster}}$  60 kHz, nominal channel spacing (for ACLR, ACS, IBB Testing)**

Note 1: Corresponds to nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4.A.1 for the channel bandwidths of the two respective NR component carriers.

Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.

Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter

$\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-7 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

Table 4.3.1.2.3.1.11-3: NR Intra-Band contiguous CA configuration CA\_n257L, SCS=120 kHz,  $\Delta F_{\text{Raster}} = 120 \text{ kHz}$ , adjusted channel spacing (default)

Note 1: The adjusted channel spacing is a multiple of subcarrier spacing applicable for both scs=60 kHz and scs=120 kHz and less than the nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4A.1 for the channel bandwidths of the two respective NR component carriers.

Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.

Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter

$\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-8 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

**Table 4.3.1.2.3.1.11-4: NR Intra-Band contiguous CA configuration CA\_n257L, SCS=120 kHz,  $\Delta F_{\text{Raster}} = 120 \text{ kHz}$ , nominal channel spacing (for ACLR, ACS, IBB Testing)**

Note 1: Corresponds to nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4.A.1 for the channel bandwidths of the two respective NR component carriers.

Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.

Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter

$\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-8 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

## 4.3.1.2.3.1.12 CA\_n257M

Table 4.3.1.2.3.1.12-1: NR Intra-Band contiguous CA configuration CA\_n257M, SCS=60 kHz,  $\Delta F_{\text{Raster}}$  60 kHz, adjusted channel spacing (default)

|   |  |  |  |  |  |             | High | 29449.92 | 2103331 | 29039.52 | 2096491 | 504 |  | 22555 | 2102779 | 0 | 0  | 0 (0) | 504 |  |
| Note 1: The adjusted channel spacing is a multiple of subcarrier spacing applicable for both scs=60 kHz and scs=120 kHz and less than the nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4A.1 for the channel bandwidths of the two respective NR component carriers.   |  |  |  |  |  |             |      |          |         |          |         |     |  |       |         |   |    |       |     |  |
| Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.  |  |  |  |  |  |             |      |          |         |          |         |     |  |       |         |   |    |       |     |  |
| Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter $\Delta F_{\text{OffsetCORESET-0-Carrier}}$ in Annex C expressed in number of common RBs.   |  |  |  |  |  |             |      |          |         |          |         |     |  |       |         |   |    |       |     |  |
| Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-7 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2. |  |  |  |  |  |             |      |          |         |          |         |     |  |       |         |   |    |       |     |  |

**Table 4.3.1.2.3.1.12-2: NR Intra-Band contiguous CA configuration CA\_n257M, SCS=60 kHz,  $\Delta F_{\text{Raster}} = 60 \text{ kHz}$ , nominal channel spacing (for ACLR, ACS, IBB Testing)**

|---|--|--|--|--|--------|------|----------|---------|----------|---------|-----|--|-------|---------|---|---|-------|-----|
|   |  |  |  |  | Uplink | High | 29449.92 | 2103331 | 29039.52 | 2096491 | 504 |  | 22555 | 2102779 | 0 | 0 | 0 (0) | 504 |
| Note 1: Corresponds to nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4A.1 for the channel bandwidths of the two respective NR component carriers.  |  |  |  |  |        |      |          |         |          |         |     |  |       |         |   |   |       |     |
| Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.  |  |  |  |  |        |      |          |         |          |         |     |  |       |         |   |   |       |     |
| Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter $\Delta F_{\text{OffsetCORESET-0-Carrier}}$ in Annex C expressed in number of common RBs.   |  |  |  |  |        |      |          |         |          |         |     |  |       |         |   |   |       |     |
| Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-7 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2. |  |  |  |  |        |      |          |         |          |         |     |  |       |         |   |   |       |     |

Table 4.3.1.2.3.1.12-3: NR Intra-Band contiguous CA configuration CA\_n257M, SCS=120 kHz,  $\Delta F_{\text{Raster}} = 120 \text{ kHz}$ , adjusted channel spacing (default)

- Note 1: The adjusted channel spacing is a multiple of subcarrier spacing applicable for both scs=60 kHz and scs=120 kHz and less than the nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4A.1 for the channel bandwidths of the two respective NR component carriers.
- Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.
- Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta f_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.
- Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-8 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

**Table 4.3.1.2.3.1.12-4: NR Intra-Band contiguous CA configuration CA\_n257M, SCS=120 kHz,  $\Delta F_{\text{Raster}} = 120 \text{ kHz}$ , nominal channel spacing (for ACLR, ACS, IBB Testing)**

Note 1: Corresponds to nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4A.1 for the channel bandwidths of the two respective NR component carriers.

Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.

Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta f_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-8 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

Note 1: Corresponds to nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4A.1 for the channel bandwidths of the two respective NR component carriers.

Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.

Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-7 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

Table 4.3.1.2.3.2.3-2: NR Intra-Band contiguous CA configuration CA\_n258D (PCC=CC1 and SCC=CC2), SCS=120 kHz, nominal channel spacing

Note 1: Corresponds to nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4A.1 for the channel bandwidths of the two respective NR component carriers.

Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.

Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-8 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

Note 1: Corresponds to nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4A.1 for the channel bandwidths of the two respective NR component carriers.

Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.

Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-7 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

Table 4.3.1.2.3.2.6-2: NR Intra-Band contiguous CA configuration CA\_n258G (PCC=CC1 and SCC=CC2), SCS=120 kHz, nominal channel spacing

Note 1: Corresponds to nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4A.1 for the channel bandwidths of the two respective NR component carriers.

Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.

Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-8 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

| <p>Note 1: Corresponds to nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4A.1 for the channel bandwidths of the two respective NR component carriers.</p> <p>Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.</p> <p>Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter <math>\Delta F_{\text{OffsetCORESET-0-Carrier}}</math> in Annex C expressed in number of common RBs.</p> <p>Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-7 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.</p> |  |           |           |                          |                   |      |                             |                        |               |                                   |                                 |                     |       |                               |           |  |  |                                      |

Note 1: Corresponds to nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4A.1 for the channel bandwidths of the two respective NR component carriers.

Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.

Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-carrier}}$  in Annex C expressed in number of common RBs.

Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-8 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

4.3.1.2.3.4      NR Intra-band contiguous CA configurations for CA\_n260

4.3.1.2.3.4.1     CA\_n260B

Editor's note: CBW=400 MHz for NR band n260 is only supported by for SCS 120kHz. Test frequencies for CA\_n260B are currently limited to SCS 120kHz for all CCs.  
Test frequencies for mixed numerologies between CCs is FFS.

Note 1: Corresponds to nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4.A.1 for the channel bandwidths of the two respective NR component carriers.

- Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.
- Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.
- Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-8 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

#### 4.3.1.2.3.4.2 CA\_n260C

Editor's note: CBW=400 MHz for NR band n260 is only supported by for SCS 120kHz. Test frequencies for CA\_n260C are currently limited to SCS 120kHz for all CCs.  
Test frequencies for mixed numerologies between CCs is FFS.

Table 4.3.1.2.3.4.2-1: NR Intra-Band contiguous CA configuration CA\_n260C (PCC=CC1 and SCC=CC2, CC3), SCS=120 kHz, nominal channel spacing

|   |   |     |     |     |                         | High | 39799.92 | 2275831 | 38884.08 | 2260567 | 504 |     | 23146 | 2272987 | 6 | 3 | 0 (0) | 1014 |
| Note 1:                                     | Corresponds to nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4A.1 for the channel bandwidths of the two respective NR component carriers.  |     |     |     |                         |      |          |         |          |         |     |     |       |         |   |   |       |      |
| Note 2:                                     | CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.  |     |     |     |                         |      |          |         |          |         |     |     |       |         |   |   |       |      |
| Note 3:                                     | The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter $\Delta F_{\text{OffsetCORESET-0-Carrier}}$ in Annex C expressed in number of common RBs.   |     |     |     |                         |      |          |         |          |         |     |     |       |         |   |   |       |      |
| Note 4:                                     | The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-8 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2. |     |     |     |                         |      |          |         |          |         |     |     |       |         |   |   |       |      |

Note 1: Corresponds to nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4A.1 for the channel bandwidths of the two respective NR component carriers.

Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.

Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-7 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

Table 4.3.1.2.3.4.3-2: NR Intra-Band contiguous CA configuration CA\_n260D (PCC=CC1 and SCC=CC2), SCS=120 kHz, nominal channel spacing

Note 1: Corresponds to nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4A.1 for the channel bandwidths of the two respective NR component carriers.

Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.

Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-8 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

Note 1: Corresponds to nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4.A.1 for the channel bandwidths of the two respective NR component carriers.

Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.

Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-8 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

Note 1: Corresponds to nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4A.1 for the channel bandwidths of the two respective NR component carriers.

Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.

Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-7 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdccch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

Table 4.3.1.2.3.4.7-2: NR Intra-Band contiguous CA configuration CA\_n260H (PCC=CC1 and SCC=CC2, CC3), SCS=120 kHz, nominal channel spacing

Note 1: Corresponds to nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4A.1 for the channel bandwidths of the two respective NR component carriers.

Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.

Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-8 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

|   |  |  |  |  |        |      |          |         |          |         |     |  |       |         |   |   |       |     |
|---|--|--|--|--|--------|------|----------|---------|----------|---------|-----|--|-------|---------|---|---|-------|-----|
|   |  |  |  |  | Uplink | High | 39949.92 | 2278331 | 39539.52 | 2271491 | 504 |  | 23163 | 2277883 | 8 | 0 | 1 (8) | 512 |
| Note 1: Corresponds to nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4A.1 for the channel bandwidths of the two respective NR component carriers.  |  |  |  |  |        |      |          |         |          |         |     |  |       |         |   |   |       |     |
| Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.  |  |  |  |  |        |      |          |         |          |         |     |  |       |         |   |   |       |     |
| Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter $\Delta F_{\text{OffsetCORESET-0-Carrier}}$ in Annex C expressed in number of common RBs.   |  |  |  |  |        |      |          |         |          |         |     |  |       |         |   |   |       |     |
| Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-7 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2. |  |  |  |  |        |      |          |         |          |         |     |  |       |         |   |   |       |     |

Table 4.3.1.2.3.4.8-2: NR Intra-Band contiguous CA configuration CA\_n260I (PCC=CC1, SCC=CC2, CC3,CC4), SCS=120 kHz, nominal channel spacing

Note 1: Corresponds to nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4A.1 for the channel bandwidths of the two respective NR component carriers.

- Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.
- Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta f_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.
- Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-8 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

Note 1: Corresponds to nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4A.1 for the channel bandwidths of the two respective NR component carriers.

Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.

Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-7 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

**Table 4.3.1.2.3.4.9-2: NR Intra-Band contiguous CA configuration CA\_n260J (PCC=CC1, SCC=CC2, CC3, CC4, CC5), SCS=120 kHz, nominal channel spacing**

Note 1: Corresponds to nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4A.1 for the channel bandwidths of the two respective NR component carriers.

Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.

Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-8 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

| Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter $\Delta F_{\text{OffsetCORESET-0-Carrier}}$ in Annex C expressed in number of common RBs.   |   |           |           |                         |                   |                             |   |               |                                  |                               |                    |      |                              |           |                                       |                                       |                                     |  |  |  |  |  |  |  |  |  |  |
| Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-8 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2. |   |           |           |                         |                   |                             |   |               |                                  |                               |                    |      |                              |           |                                       |                                       |                                     |  |  |  |  |  |  |  |  |  |  |

| <p>Note 1: Corresponds to nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4A.1 for the channel bandwidths of the two respective NR component carriers.</p> <p>Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.</p> <p>Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter <math>\Delta F_{\text{OffsetCORESET-0-Carrier}}</math> in Annex C expressed in number of common RBs.</p> <p>Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-7 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.</p> |     |     |    |                         |                         |                      |   |          |          |         |     |       |         |         |    |       |       |     |  |

Note 1: Corresponds to nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4A.1 for the channel bandwidths of the two respective NR component carriers.

Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.

Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-8 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

## 4.3.1.2.3.4.15 CA\_n260Q

FFS

## 4.3.1.2.3.5 NR Intra-band contiguous CA configurations for CA\_n261

## 4.3.1.2.3.5.1 CA\_n261B

Editor's note: CBW=400 MHz for NR band n261 is only supported by for SCS 120kHz. Test frequencies for CA\_n261B are currently limited to SCS 120kHz for all CCs.

Test frequencies for mixed numerologies between CCs is FFS.

Table 4.3.1.2.3.5.1-1: NR Intra-Band contiguous CA configuration CA\_n261B (PCC=CC1 and SCC=CC2), SCS=120 kHz, nominal channel spacing

| CBW combination                             | CC  | CBW [MHz] | SCS [kHz] | carrier Bandwidth [PRBs] | Range             | Carrier centre [MHz] Note 2 | Carrier centre [ARFCN] | point A [MHz] | absolute FrequencyPoint A [ARFCN] | offsetToCarrier [Carrier PRBs] | SS block SCS [kHz] | GSCN  | absolute FrequencySSB [ARFCN] | $k_{SSB}$ | Offset Carrier CORESET#0 [RBs] Note 3 | CORESET #0 Index Note 4 | offset ToPortA (SIB1) [PRBs] Note 4 |      |

Note 1: Corresponds to nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4.A.1 for the channel bandwidths of the two respective NR component carriers.

Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.

Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter

$\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-8 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

#### 4.3.1.2.3.5.2 CA\_n261C

Editor's note: CBW=400 MHz for NR band n261 is only supported by for SCS 120kHz. Test frequencies for CA\_n261C are currently limited to SCS 120kHz for all CCs.  
Test frequencies for mixed numerologies between CCs is FFS.

**Table 4.3.1.2.3.5.2-1: NR Intra-Band contiguous CA configuration CA\_n261C (PCC=CC1 and SCC=CC2, CC3), SCS=120 kHz, nominal channel spacing**

| <p>Note 1: Corresponds to nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4A.1 for the channel bandwidths of the two respective NR component carriers.</p> <p>Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.</p> <p>Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter <math>\Delta F_{\text{OffsetCORESET-0-Carrier}}</math> in Annex C expressed in number of common RBs.</p> <p>Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-7 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.</p> |   |           |           |                          |                   |                             |                        |               |                                   |                                |                    |      |                               |           |                                       |                                       |                                      |     |

| <p>Note 1: Corresponds to nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4A.1 for the channel bandwidths of the two respective NR component carriers.</p> <p>Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.</p> <p>Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter <math>\Delta F_{\text{OffsetCORESET-0-Carrier}}</math> in Annex C expressed in number of common RBs.</p> <p>Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-8 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.</p> |   |           |           |                          |                   |                             |                        |               |                                   |                                |                    |      |                               |           |                                       |                                       |                                      |      |

|                 |  |           |           |                          |                   | High | 28299.96                    | 2084165                | 27889.56      | 2077325                           | 504                            |                    | 22489 | 2083771                       | 2         | 5                                     | 1 (8)                                 | 517                                  |

Note 1: Corresponds to nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4A.1 for the channel bandwidths of the two respective NR component carriers.

Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.

Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-7 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

Table 4.3.1.2.3.5.6-2: NR Intra-Band contiguous CA configuration CA\_n261G (PCC=CC1 and SCC=CC2), SCS=120 kHz, nominal channel spacing

Note 1: Corresponds to nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4.A.1 for the channel bandwidths of the two respective NR component carriers.

Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.

Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-8 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

## 4.3.1.2.3.5.7 CA\_n261H

Table 4.3.1.2.3.5.7-1: NR Intra-Band contiguous CA configuration CA\_n261H (PCC=CC1 and SCC=CC2, CC3), SCS=60 kHz, nominal channel spacing

| CBW combination   | CC   | CBW [MHz] | SCS [kHz] | carrier Bandwidth [PRBs] | Range             |      | Carrier centre [MHz] Note 2 | Carrier centre [ARFCN] | point A [MHz] | absolute FrequencyPoint A [ARFCN] | offsetToCarrier [Carrier PRBs] | SS block SCS [kHz] | GSCN  | absolute FrequencySSB [ARFCN] | $k_{SSB}$ | Offset Carrier CORESET#0 [RBs] Note 3 | CORESET#0 Index (Offset [RBs]) Note 4 | offset ToPointA (SIB1) [PRBs] Note 4 |

| <p>Note 1: Corresponds to nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4A.1 for the channel bandwidths of the two respective NR component carriers.</p> <p>Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.</p> <p>Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter <math>\Delta F_{\text{OffsetCORESET-0-Carrier}}</math> in Annex C expressed in number of common RBs.</p> <p>Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-7 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdccch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.</p> |  |           |           |                          |                   |      |                             |                        |               |                                   |                                |                    |       |                               |           |                                       |                                       |                                      |

Note 1: Corresponds to nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4A.1 for the channel bandwidths of the two respective NR component carriers.

Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.

Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta f_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-8 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

|   |  |  |  |  |        |      |          |         |          |         |     |  |       |         |   |   |       |     |
|---|--|--|--|--|--------|------|----------|---------|----------|---------|-----|--|-------|---------|---|---|-------|-----|
|   |  |  |  |  | Uplink | High | 28299.96 | 2084165 | 27889.56 | 2077325 | 504 |  | 22489 | 2083771 | 2 | 5 | 1 (8) | 517 |
| Note 1: Corresponds to nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4A.1 for the channel bandwidths of the two respective NR component carriers.  |  |  |  |  |        |      |          |         |          |         |     |  |       |         |   |   |       |     |
| Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.  |  |  |  |  |        |      |          |         |          |         |     |  |       |         |   |   |       |     |
| Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter $\Delta F_{\text{OffsetCORESET-0-Carrier}}$ in Annex C expressed in number of common RBs.   |  |  |  |  |        |      |          |         |          |         |     |  |       |         |   |   |       |     |
| Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-7 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2. |  |  |  |  |        |      |          |         |          |         |     |  |       |         |   |   |       |     |

Note 1: Corresponds to nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4A.1 for the channel bandwidths of the two respective NR component carriers.

- Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.
- Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta f_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.
- Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-8 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

|  |  |    |     |                         | High | 28299.96 | 2084165 | 27889.56 | 2077325 | 504 |     | 22489 | 2083771 | 2  | 5  | 1 (8) | 517 |  |  |  |  |
| Note 1:                                    | Corresponds to nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4A.1 for the channel bandwidths of the two respective NR component carriers.   |    |     |                         |      |          |         |          |         |     |     |       |         |    |    |       |     |  |  |  |  |
| Note 2:                                    | CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.   |    |     |                         |      |          |         |          |         |     |     |       |         |    |    |       |     |  |  |  |  |
| Note 3:                                    | The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter $\Delta F_{\text{OffsetCORESET-0-Carrier}}$ in Annex C expressed in number of common RBs.  |    |     |                         |      |          |         |          |         |     |     |       |         |    |    |       |     |  |  |  |  |
| Note 4:                                    | The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-7 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdccch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2. |    |     |                         |      |          |         |          |         |     |     |       |         |    |    |       |     |  |  |  |  |

Note 1: Corresponds to nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4A.1 for the channel bandwidths of the two respective NR component carriers.

Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.

Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-8 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

| 100+100   | CC1 CC2 | 100 100   | 60        | 132 132                 | Downlink & Uplink | Low, Mid, High              | Same values as for Low, Mid, High range in Table 4.3.1.2.3.5.6-1 for CBW combination 100+100, CC1, CC2 and SCS=60 kHz. |               |                                  |                                |                    |      |                              |           |                                       |                                       |                                     |  |  |  |  |  |  |  |  |  |  |
| Note 1: Corresponds to nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4A.1 for the channel bandwidths of the two respective NR component carriers.  |         |           |           |                         |                   |                             |  |               |                                  |                                |                    |      |                              |           |                                       |                                       |                                     |  |  |  |  |  |  |  |  |  |  |
| Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.  |         |           |           |                         |                   |                             |  |               |                                  |                                |                    |      |                              |           |                                       |                                       |                                     |  |  |  |  |  |  |  |  |  |  |
| Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter $\Delta F_{\text{OffsetCORESET-0-Carrier}}$ in Annex C expressed in number of common RBs.   |         |           |           |                         |                   |                             |  |               |                                  |                                |                    |      |                              |           |                                       |                                       |                                     |  |  |  |  |  |  |  |  |  |  |
| Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-8 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2. |         |           |           |                         |                   |                             |  |               |                                  |                                |                    |      |                              |           |                                       |                                       |                                     |  |  |  |  |  |  |  |  |  |  |

| 100+100   | CC1 CC2                                   | 100 100   | 120       | 66 66                   | Downlink & Uplink | Low, Mid, High              | Same values as for Low, Mid, High range in Table 4.3.1.2.3.5.6-2 for CBW combination 100+100, CC1, CC2 and SCS=120 |               |                                  |                               |                    |      |                              |           |                                       |                                       |                                     |  |  |  |  |  |  |  |  |  |  |
| Note 1: Corresponds to nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4A.1 for the channel bandwidths of the two respective NR component carriers.  |   |           |           |                         |                   |                             |  |               |                                  |                               |                    |      |                              |           |                                       |                                       |                                     |  |  |  |  |  |  |  |  |  |  |
| Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.  |   |           |           |                         |                   |                             |  |               |                                  |                               |                    |      |                              |           |                                       |                                       |                                     |  |  |  |  |  |  |  |  |  |  |
| Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter $\Delta F_{\text{OffsetCORESET-0-Carrier}}$ in Annex C expressed in number of common RBs.   |   |           |           |                         |                   |                             |  |               |                                  |                               |                    |      |                              |           |                                       |                                       |                                     |  |  |  |  |  |  |  |  |  |  |
| Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-7 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2. |   |           |           |                         |                   |                             |  |               |                                  |                               |                    |      |                              |           |                                       |                                       |                                     |  |  |  |  |  |  |  |  |  |  |
