| Note 1:                                    | Corresponds to nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4A.1 for the channel bandwidths of the two respective NR component carriers.  |     |    |                         |                         |                      |   |          |          |         |     |       |         |         |    |       |       |     |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| Note 2:                                    | CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.  |     |    |                         |                         |                      |   |          |          |         |     |       |         |         |    |       |       |     |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| Note 3:                                    | The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter $\Delta F_{\text{OffsetCORESET-0-Carrier}}$ in Annex C expressed in number of common RBs.   |     |    |                         |                         |                      |   |          |          |         |     |       |         |         |    |       |       |     |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| Note 4:                                    | The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-7 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2. |     |    |                         |                         |                      |   |          |          |         |     |       |         |         |    |       |       |     |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

Note 1: Corresponds to nominal channel spacing in accordance with TS 38.101-2 [8], clause 5.4A.1 for the channel bandwidths of the two respective NR component carriers.

Note 2: CCs are specified in increasing frequency order. CC1 is used as PCell if nothing else is specified in the test case.

Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Note 4: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-8 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

#### 4.3.1.2.3.5.15 CA\_n261Q

FFS

#### 4.3.1.2.4 NR intra-band non-contiguous CA configurations in FR2

##### 4.3.1.2.4.1 NR Intra-band non-contiguous CA configurations for CA\_n257

##### 4.3.1.2.4.2 NR Intra-band non-contiguous CA configurations for CA\_n258

##### 4.3.1.2.4.3 FFS

##### 4.3.1.2.4.4 NR Intra-band non-contiguous CA configurations for CA\_n260

##### 4.3.1.2.4.4.1 CA\_n260(XA)

Editor's note: This clause is reserved for test frequencies for CA\_n260(XA) configurations where x is  $\geq 2$ , e.g. CA\_n260(2A), CA\_n260(3A) and CA\_n260(4A)

##### 4.3.1.2.4.4.2 CA\_n260(A-I)

Editor's note: CBW=400 MHz for NR band n260 is only supported by for SCS 120kHz. Test frequencies for CA\_n260(A-I) are currently limited to SCS 120kHz for all CCs. Test frequencies for mixed numerologies between CCs is FFS.

**Table 4.3.1.2.4.4.2-1: NR Intra-Band non-contiguous CA configuration CA\_n260(A-I), SCS=120 kHz, Max Wgap**

| DC_n78A-n257I       | DC_n78A-n257A    | n78A                        | CA_n257I                    | n78A                      | n257A                     | No                                       |
| DC_n79A-n257A       | DC_n79A-n257A    | n79A                        | n257A                       | n79A                      | n257A                     | Yes                                      |
| DC_n79A-n257G       | DC_n79A-n257A    | n79A                        | CA_n257G                    | n79A                      | n257A                     | No                                       |
| DC_n79A-n257H       | DC_n79A-n257A    | n79A                        | CA_n257H                    | n79A                      | n257A                     | No                                       |
| DC_n79A-n257I       | DC_n79A-n257A    | n79A                        | CA_n257I                    | n79A                      | n257A                     | No                                       |

Note 1: Protocol testing is limited to NR-DC configurations with 2CC.

### 4.3.1.4 Test frequencies for EN-DC band combinations within FR1

#### 4.3.1.4.1 Inter-band EN-DC configurations within FR1

##### 4.3.1.4.1.1 General

For inter-band EN-DC configurations as listed in this clause, the following apply:

For the E-UTRA band and E-UTRA CA configurations, test frequencies as specified in TS 36.508 [2], clause 4.3.1 are used.

For the NR band and NR CA configurations, test frequencies as specified in clause 4.3.1.1 are used.

For the EN-DC inter-band configuration that includes an EN-DC contiguous configuration (e.g. DC\_2A-(n)71AA) the EN-DC contiguous configuration is listed in the NR configuration column and the test frequencies as specified in clause 4.3.1.4.2 are used.

For the secondary NR band in inter-band signalling test cases, the band selected is based on the subset of NR bands supported within the EN-DC configurations specified in Table 4.3.1.4.1.2-1 for NR FR1 and 4.3.1.5.1.2-1 for NR FR2.

## 4.3.1.4.1.2

Inter-band EN-DC configurations within FR1 (two bands)

**Table 4.3.1.4.1.2-1: Inter-band EN-DC configurations within FR1 (two bands)**

| EN-DC configuration | Uplink EN-DC Configuration | EN-DC E-UTRA downlink configuration | EN-DC NR downlink configuration | EN-DC E-UTRA uplink configuration | EN-DC NR uplink configuration | Applicable for protocol testing (Note 1) |
|---------------------|----------------------------|-------------------------------------|---------------------------------|-----------------------------------|-------------------------------|--|

Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-1 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdccch. ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

Note 2: The nominal carrier spacing between the E-UTRA and the NR carriers is set in accordance to TS 38.101-3 [9], clause 5.4B.1.

Table 4.3.1.4.2.41.1-1A: EN-DC combination DC\_(n)41AA, intra-band contiguous, SCS 15 kHz, 15 kHz NR raster, E-UTRA CC at the band edges

Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-1 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdccch. ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

Note 2: The nominal carrier spacing between the E-UTRA and the NR carriers is set in accordance to TS 38.101-3 [9], clause 5.4B.1.

Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Table 4.3.1.4.2.41.1-2: EN-DC combination DC\_(n)41AA, intra-band contiguous, SCS 30 kHz, 30 kHz NR raster, NR CC at the band edges

Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-4 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdccchConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

Note 2: The nominal carrier spacing between the E-UTRA and the NR carriers is set in accordance to TS 38.101-3 [9], clause 5.4B.1.

Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{OffsetCORESET-0-Carrier}$  in Annex C expressed in number of common RBs.

Table 4.3.1.4.2.41.1-2A: EN-DC combination DC\_(n)41AA, intra-band contiguous, SCS 30 kHz, 30 kHz NR raster, E-UTRA CC at the band edges

Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-4 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdch. ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

Note 2: The nominal carrier spacing between the E-UTRA and the NR carriers is set in accordance to TS 38.101-3 [9], clause 5.4B.1.

Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

**Table 4.3.1.4.2.41.1-3: EN-DC combination DC\_(n)41AA, intra-band contiguous, SCS 60 kHz, 15 kHz NR raster, NR CC at the band edges without CORESET#0**

Note 1: The nominal carrier spacing between the E-UTRA and the NR carriers is set in accordance to TS 38.101-3 [9], clause 5.4B1.

Note 2: FR1 carrier without CORESET#0 is indicated in the MIB by setting  $k_{SSB} = 31$ , controlResourceSetZero=0 and searchSpaceZero = 0 (TS 38.213 [22], clause 13).

**Table 4.3.1.4.2.41.1-3A: EN-DC combination DC\_(n)41AA, intra-band contiguous, SCS 60 kHz, 15 kHz NR raster, E-UTRA CC at the band edges without CORESET#0**

Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-2 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdch. ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

Note 2: The nominal carrier spacing between the E-UTRA and the NR carriers is set in accordance to TS 38.101-3 [9], clause 5.4B1.

Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Table 4.3.1.4.2.71.1-1A: EN-DC combination DC\_(n)71AA, intra-band contiguous, SCS 15 kHz, 100 kHz NR raster, E-UTRA CC at the band edges

Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-2 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcchConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

Note 2: The nominal carrier spacing between the E-UTRA and the NR carriers is set in accordance to TS 38.101-3 [9], clause 5.4B1.

Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{\text{OffsetCORESET-0-Carrier}}$  in Annex C expressed in number of common RBs.

Table 4.3.1.4.2.71.1-2: EN-DC combination DC\_(n)71AA, intra-band contiguous, SCS 30 kHz, 100 kHz NR raster, NR CC at the band edge

Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-2 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcchConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

Note 2: The nominal carrier spacing between the E-UTRA and the NR carriers is set in accordance to TS 38.101-3 [9], clause 5.4B1.

Note 3: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter  $\Delta F_{OffsetCORESET-0-Carrier}$  in Annex C expressed in number of common RBs.

Table 4.3.1.4.2.71.1-2A: EN-DC combination DC\_(n)71AA, intra-band contiguous, SCS 30 kHz, 100 kHz NR raster, E-UTRA CC at the band edge

|                                     |            |                 |                         |          | Mid                         | 678.000                | 135600        | 489.72                            | 97944                           | 504                |       | -                             | -         | -                                      | -                                      | -                                   |      |
|                                     |            |                 |                         |          | High                        | 685.500                | 137100        | 676.5                             | 135300                          | 6                  |       | -                             | -         | -                                      | -                                      | -                                   |      |

Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-2 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdccch. ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

Note 2: The nominal carrier spacing between the E-UTRA and the NR carriers is set in accordance to TS 38.101-3 [9], clause 5.4B1.

## 4.3.1.4.3 Intra-band non-contiguous EN-DC configurations within FR1

## 4.3.1.4.3.1 – 4.3.1.4.3.40 FFS

## 4.3.1.4.3.41 Intra-band non-contiguous EN-DC configurations DC\_41\_n41

## 4.3.1.4.3.41.1 DC\_41A\_n41A

**Table 4.3.1.4.41.1-1: Test frequencies for EN-DC combination DC\_41A\_n41A, Max Wgap**

| Test Frequency ID               | NR channel bandwidth [MHz] | NR SCS [kHz] | NR test frequency range (Note 1) | E-UTRA channel bandwidth [MHz] | E-UTRA frequency range (Note 2) |
|---------------------------------|----------------------------|--------------|----------------------------------|--------------------------------|---------------------------------|
| Low with maxWgap (NR – E-UTRA)  | 40                         | 30           | Low                              | 20                             | High                            |
|                                 | 50                         |              |                                  |                                |                                 |
|                                 | 60                         |              |                                  |                                |                                 |
|                                 | 80                         |              |                                  |                                |                                 |

| High with maxWgap (E-UTRA - NR) | 40                         |              | High                             | 20                             | Low                             |
|                                 | 50                         |              |                                  |                                |                                 |
|                                 | 60                         |              |                                  |                                |                                 |
|                                 | 80                         |              |                                  |                                |                                 |
|                                 | 100                        |              |                                  |                                |                                 |

Note 1: The NR test frequencies are specified in clause 4.3.1.1.41 for the NR Channel Bandwidth, NR SCS and NR test frequency range as given in the table.

Note 2: The E-UTRA test frequencies are specified in TS 36.508 [2], clause 4.3.1.2.9 for the E-UTRA channel bandwidth and E-UTRA test frequency range as given in the table.

## 4.3.1.4.3.41.2 DC\_41C\_n41A

**Table 4.3.1.4.41.2-1: Test frequencies for EN-DC combination DC\_41C\_n41A, SCS=30kHz, Max Wgap**

| Test Frequency ID               | NR channel bandwidth [MHz] | NR SCS [kHz] | NR test frequency range (Note 1) | E-UTRA CC Combo / N <sub>RB_agg</sub> [MHz] | E-UTRA frequency range (Note 2) |
|---------------------------------|----------------------------|--------------|----------------------------------|---|---------------------------------|
| Low with maxWgap (NR – E-UTRA)  | 40                         | 30           | Low                              | 20 + 20                                     | High                            |
|                                 | 50                         |              |                                  |   |                                 |
|                                 | 60                         |              |                                  |   |                                 |
|                                 | 80                         |              |                                  |   |                                 |
|                                 | 100                        |              |                                  |   |                                 |
| High with maxWgap (E-UTRA - NR) | 40                         |              | High                             | 20 + 20                                     | Low                             |
|                                 | 50                         |              |                                  |   |                                 |
|                                 | 60                         |              |                                  |   |                                 |
|                                 | 80                         |              |                                  |   |                                 |
|                                 | 100                        |              |                                  |   |                                 |

Note 1: The NR test frequencies are specified in clause 4.3.1.1.41 for the NR Channel Bandwidth, NR SCS and NR test frequency range as given in the table.

Note 2: The E-UTRA test frequencies are specified in TS 36.508 [2], clause 4.3.1.2.9A for the E-UTRA CC Combo and E-UTRA test frequency range as given in the table.

## 4.3.1.4.3.41.3 DC\_41D\_n41A

**Table 4.3.1.4.41.3-1: Test frequencies for EN-DC combination DC\_41D\_n41A, SCS=30kHz, Max Wgap**

| Test Frequency ID               | NR channel bandwidth [MHz] | NR SCS [kHz] | NR test frequency range (Note 1) | E-UTRA CC Combo / N <sub>RB_agg</sub> [MHz] | E-UTRA frequency range (Note 2) |
|---------------------------------|----------------------------|--------------|----------------------------------|---|---------------------------------|
| Low with maxWgap (NR – E-UTRA)  | 40                         | 30           | Low                              | 20 + 20 + 20                                | High                            |
|                                 | 50                         |              |                                  |   |                                 |
|                                 | 60                         |              |                                  |   |                                 |
|                                 | 80                         |              |                                  |   |                                 |
|                                 | 100                        |              |                                  |   |                                 |
| High with maxWgap (E-UTRA - NR) | 40                         |              | High                             | 20 + 20 + 20                                | Low                             |
|                                 | 50                         |              |                                  |   |                                 |
|                                 | 60                         |              |                                  |   |                                 |
|                                 | 80                         |              |                                  |   |                                 |
|                                 | 100                        |              |                                  |   |                                 |
| Low with maxWgap (NR – E-UTRA)  | 40                         | 60           | Low                              | 20 + 20 + 20                                | High                            |
|                                 | 50                         |              |                                  |   |                                 |
|                                 | 60                         |              |                                  |   |                                 |
|                                 | 80                         |              |                                  |   |                                 |
|                                 | 100                        |              |                                  |   |                                 |
| High with maxWgap (E-UTRA - NR) | 40                         |              | High                             | 20 + 20 + 20                                | Low                             |
|                                 | 50                         |              |                                  |   |                                 |
|                                 | 60                         |              |                                  |   |                                 |
|                                 | 80                         |              |                                  |   |                                 |
|                                 | 100                        |              |                                  |   |                                 |

Note 1: The NR test frequencies are specified in clause 4.3.1.1.41 for the NR Channel Bandwidth, NR scs and NR test frequency range as given in the table.

Note 2: The E-UTRA test frequencies are specified in TS 36.508 [2], clause 4.3.1.2.9A for the E-UTRA CC Combo and E-UTRA test frequency range as given in the table.

## 4.3.1.5 Test frequencies for EN-DC band combinations including FR2

## 4.3.1.5.1 Inter-band EN-DC configurations including FR2

## 4.3.1.5.1.1 General

For inter-band EN-DC configurations as listed in this clause, the following apply:

For the E-UTRA band and E-UTRA CA configurations, test frequencies as specified in TS 36.508 [2], clause 4.3.1 are used.

For the NR band and NR CA configurations, test frequencies as specified in clause 4.3.1.2 are used.

For the secondary NR band in inter-band signalling test cases, the band selected is based on the subset of NR bands supported within the EN-DC configurations specified in Table 4.3.1.4.1.2-1 for NR FR1 and 4.3.1.5.1.2-1 for NR FR2.

## 4.3.1.5.1.2 Inter-band EN-DC configurations including FR2 (two bands)

**Table 4.3.1.5.1.2-1: Inter-band EN-DC configurations including FR2 (two bands)**

| EN-DC configuration | Uplink EN-DC Configuration | EN-DC E-UTRA downlink configuration | EN-DC NR downlink configuration | EN-DC E-UTRA uplink configuration | EN-DC NR uplink configuration | Applicable for protocol testing (Note 1) |
|---------------------|----------------------------|-------------------------------------|---------------------------------|-----------------------------------|-------------------------------|--|
| DC_1A_n257A         | DC_1A_n257A                | 1A                                  | n257A                           | 1A                                | n257A                         | Yes                                      |

Note 1: Protocol testing is limited to EN-DC configurations with 1 CC E-UTRA and 1CC or 2CC NR configurations.

#### 4.3.1.5.1.6 Inter-band EN-DC configurations including FR2 (six bands)

**Table 4.3.1.5.1.6-1: Inter-band EN-DC configurations including FR2 (six bands)**

| EN-DC Configuration | Uplink EN-DC configuration | E-UTRA downlink configuration | NR downlink configuration | E-UTRA uplink configuration | NR uplink configuration | Applicable for protocol testing (Note 1) |
|---------------------|----------------------------|-------------------------------|---------------------------|-----------------------------|-------------------------|--|
| FFS                 | FFS                        | FFS                           | FFS                       | FFS                         | FFS                     | FFS                                      |

#### 4.3.1.6 Test frequencies for EN-DC band combinations including FR1 and FR2

##### 4.3.1.6.1 Inter-band EN-DC configurations including FR1 and FR2

###### 4.3.1.6.1.1 General

For inter-band EN-DC configurations as listed in this clause, the following apply:

For the E-UTRA band and E-UTRA CA configurations, test frequencies as specified in TS 36.508 [2], clause 4.3.1 are used.

For the NR band and NR CA configurations, test frequencies as specified in clause 4.3.1 for FR1 and 4.3.2 for FR2 are used.

## 4.3.1.6.1.2

Inter-band EN-DC configurations including FR1 and FR2 (three bands)

**Table 4.3.1.6.1.2-1: Inter-band EN-DC including FR1 and FR2 (three bands)**

| EN-DC Configuration | Uplink EN-DC configuration | E-UTRA downlink configuration | NR downlink configuration | E-UTRA uplink configuration | NR uplink configuration | Applicable for protocol testing (Note 1) |
|---------------------|----------------------------|-------------------------------|---------------------------|-----------------------------|-------------------------|--|
| DC_1A_n78A-n257A    | DC_1A_n78A                 | 1A                            | CA_n78A-n257A             | 1A                          | n78A                    | Yes (NR 2CC)                             |

4.3.1.6.1.4 Inter-band EN-DC configurations including FR1 and FR2 (five bands)

**Table 4.3.1.6.1.4-1: Inter-band EN-DC including FR1 and FR2 (five bands)**

| EN-DC Configuration | Uplink EN-DC configuration | E-UTRA downlink configuration | NR downlink configuration | E-UTRA uplink configuration | NR uplink configuration |
|---------------------|----------------------------|-------------------------------|---------------------------|-----------------------------|-------------------------|
| FFS                 | FFS                        | FFS                           | FFS                       | FFS                         | FFS                     |

4.3.1.6.1.5 Inter-band EN-DC configurations including FR1 and FR2 (six bands)

**Table 4.3.1.6.1.5-1: Inter-band EN-DC including FR1 and FR2 (six bands)**

| EN-DC Configuration | Uplink EN-DC configuration | E-UTRA downlink configuration | NR downlink configuration | E-UTRA uplink configuration | NR uplink configuration |
|---------------------|----------------------------|-------------------------------|---------------------------|-----------------------------|-------------------------|
| FFS                 | FFS                        | FFS                           | FFS                       | FFS                         | FFS                     |

### 4.3.1.7 Test frequencies for Non-3GPP Access

#### 4.3.1.7.1 WLAN Test frequencies

The same WLAN test frequencies as in TS 36.508 [2] clause 4.3.1.6 applies.

## 4.3.2 Radio conditions

### 4.3.2.1 FR1, normal propagation condition for connected

The downlink connection between the System Simulator and the UE is without Additive White Gaussian Noise, and has no fading or multipath effects.

The uplink connection between the UE and System Simulator is without Additive White Gaussian Noise, and has no fading or multipath effects.

### 4.3.2.2 FR2, condition for OTA

FFS

## 4.3.3 Physical channel allocations

### 4.3.3.1 E-UTRA

The same physical channel allocations as in TS 36.508 [2] clause 4.3.3 applies.

### 4.3.3.2 NR

#### 4.3.3.2.1 Antennas

For FR1 testing, if the UE has two or four Rx antennas, the same downlink signal is applied to each antenna. All UE Rx antennas shall be connected unless otherwise stated in the test case.

#### 4.3.3.2.2 Downlink physical channels and physical signals

**Table 4.3.3.2.2-1: Power allocation for OFDM symbols and reference signals**

| Parameter                         | Unit | Value                  |
|-----------------------------------|------|------------------------|
| SSS transmit power                | W    | Test specific (Note 1) |
| EPRE ratio of PSS to SSS          | dB   | 0                      |
| EPRE ratio of PBCH DMRS to SSS    | dB   | 0                      |
| EPRE ratio of PBCH to PBCH DMRS   | dB   | 0                      |
| EPRE ratio of PDCCH DMRS to SSS   | dB   | 0                      |
| EPRE ratio of PDCCH to PDCCH DMRS | dB   | 0                      |
| EPRE ratio of PDSCH DMRS to SSS   | dB   | 0                      |
| EPRE ratio of PDSCH to PDSCH DMRS | dB   | 0                      |
| EPRE ratio of PTRS to PDSCH       | dB   | 0                      |
| EPRE ratio of CSI-RS to SSS       | dB   | 0                      |

Note 1: For signalling test cases the power allocation according to clause 6.2.1.2 applies.

#### 4.3.3.2.3 Mapping of downlink physical channels and signals to physical resources

Parameters for mapping of downlink physical channels and signals are specified as follows.

Normal Cyclic Prefix

$N_{ID}^{cell}$ , Physical layer cell identity = 0 is used as the default physical layer cell identity

For Signalling testing, the same subcarrier spacing (SCS) is used for carrier and SS blocks; the tables in clause 6.2.3.1 specify which SCS to use for a particular NR band. In general, SCS=15kHz is used for FR1 FDD, SCS=15kHz or SCS=30kHz is used for FR1 TDD and SCS=120kHz is used for FR2.

For Signalling testing, the default channel bandwidth is specified in clause 6.2.3.1 for each NR band.

For Signalling testing, single SS Tx antenna is used, in FR1, unless specified otherwise in the test case.

For RF testing, the mapping of DL physical channels to resource element is defined in Annex C of TS 38.101-1 [7] and TS 38.101-2 [8] and TS 38.101-3 [9].

#### 4.3.4 Signal levels

##### 4.3.4.1 Signal levels for conducted testing

###### 4.3.4.1.1 Downlink signal levels

For E-UTRA cell in EN-DC with FR1 NR, the downlink power setting specified in Table 4.3.4.1-1 of TS 36.508[2] are used unless otherwise specified in a test case.

##### 4.3.4.2 Signal levels for OTA testing

As defined in clause 5.2.1.2 for RF tests.

As defined in clause 6.2.1.2 for Signalling tests.

As defined in clause 7.2.1.2 for RRM tests.

#### 4.3.5 Standard test signals

#### 4.3.6 Physical layer parameters

##### 4.3.6.1 Downlink physical layer parameters

###### 4.3.6.1.1 Physical layer parameters for scheduling of PUSCH

###### 4.3.6.1.1.1 Physical layer parameters for DCI format 0\_0

DCI format 0\_0 is used for the scheduling of PUSCH in one cell.

Default physical layer parameters for DCI format 0\_0 are specified in table 4.3.6.1.1.1-1.

**Table 4.3.6.1.1.1-1: Physical layer parameters for DCI format 0\_0**

| Parameter                            | Value  | Value in binary |
|--------------------------------------|--|-----------------|
| Identifier for DCI formats           | Indicating an UL DCI format  | "0"             |
| Frequency domain resource assignment | Dependent on test parameters   | -               |
| Time domain resource assignment      | Indicating the first entry of PUSCH-TimeDomainResourceAllocationList to be used              | "0000"          |
| Frequency hopping flag               | w/o hopping  | "0"             |
| Modulation and coding scheme         | Dependent on test parameters   |                 |
| New data indicator                   | Set for every data transmission/retransmission according to the rules specified in TS 38.321 | -               |
| Redundancy version                   | Dependent on test parameters   | -               |
| HARQ process number                  | Dependent on test parameters   | -               |
| TPC command for scheduled PUSCH      | 0 dB (accumulated TPC) as per Table 7.1.1-1 in TS 38.213                                     | "01"            |
| UL/SUL indicator                     | Not present (0 bit for UEs not configured with SUL in the cell)                              | -               |

#### 4.3.6.1.1.2 Physical layer parameters for DCI format 0\_1

DCI format 0\_1 is used for the scheduling of PUSCH in one cell.

Default physical layer parameters for DCI format 0\_1 are specified in table 4.3.6.1.1.2-1.

**Table 4.3.6.1.1.2-1: Physical layer parameters for DCI format 0\_1**

| Parameter                                  | Value  | Value in binary                             | Condition                   |
|--|--|---|-----------------------------|
| Carrier indicator                          | Not present  | -   |                             |
| UL/SUL indicator                           | Not present (0 bit for UEs not configured with SUL in the cell)  | -   |                             |
|  | 1  | 1   | SUL                         |
| Identifier for DCI formats                 | Indicating an UL DCI format  | "0"   |                             |
| Bandwidth part indicator                   | Not present (indicating active BWP, not present in case of only one <i>BWP-Id</i> as per Table 4.6.3-8)                              | -   |                             |
| Frequency domain resource assignment       | Dependent on test parameters   | -   |                             |
| Time domain resource assignment            | Indicating the first entry of PUSCH-TimeDomainResourceAllocationList to be used  | "0000"                                      |                             |
| Frequency hopping flag                     | Not present  | -   |                             |
| Modulation and coding scheme               | Dependent on test parameters   | -   |                             |
| New data indicator                         | Set for every data transmission / retransmission according to the rules specified in TS 38.321 [20]                                  | -   |                             |
| Redundancy version                         | Dependent on test parameters   | -   |                             |
| HARQ process number                        | Dependent on test parameters   | -   |                             |
| 1 <sup>st</sup> downlink assignment index  | Dependent on test parameters   |   |                             |
| 2 <sup>nd</sup> downlink assignment index  | Not present (0 bit if one HARQ-ACK sub-codebook)   | -   |                             |
| TPC command for scheduled PUSCH            | 0 dB (accumulated TPC) as per Table 7.1.1-1 in TS 38.213 [22]  | "01"  |                             |
| SRS resource indicator                     | Not present  | -   |                             |
| Precoding information and number of layers | Not present (0 bits for 1 antenna port and if the higher layer parameter txConfig = Codebook as per clause 7.3.1.1.2 TS 38.212 [27]) | -   |                             |
|  | 2  | "10"  | 2TX_UL_MIMO or ULFPTx_Mode1 |
|  | Dependent on UE reported full power PMI  | 1 bit as per Table 7.3.1.1.2-5 in TS 38.212 | ULFPTx_Mode2                |
|  | 0 or 1   | 1 bit                                       | ULFPTx_ModeFull             |
| Antenna ports                              | Port 0 (NOTE 2)  | "000"                                       |                             |
|  |  | "00"  | TRANSFORM_PRECODER_ENABLED  |
| SRS request                                | No aperiodic SRS resource set triggered as per Table 7.3.1.1.2-24 in TS 38.212 (no SUL configured)                                   | "00"  |                             |
| CSI request                                | Not present  | -   |                             |
| CBG transmission information               | Not present  | -   |                             |
| PTRS-DMRS association                      | DMRS port 0  | "00"  | PTRS_UL_CONFIG              |
|  | Not present  | -   |                             |
| beta_offset indicator                      | Not present (0 bit if the higher layer parameter dynamic in uci-on-PUSCH is not configured)  | -   |                             |
| DMRS sequence initialization               | $n_{\text{SCID}} = 0$ (ScramblingID0 is not present as per Table 4.6.3-50)   | "0"   |                             |
|  | Not present  | -   | TRANSFORM_PRECODER_ENABLED  |

|   |   |   |  |
|---|---|---|--|
| UL-SCH indicator  | Dependent on test parameters<br>1 bit. A value of "1" indicates UL-SCH shall be transmitted on the PUSCH and a value of "0" indicates UL-SCH shall not be transmitted on the PUSCH. | - |  |
| NOTE 1: codebookSubset = nonCoherent, 2 layers, TPMI = 0 as specified in TS 38.212 [27] Table 7.3.1.1.2-4   |   |   |  |
| NOTE 2: Bitsize depends on transform precoder being enabled/disabled (PUSCH_Config, Table 4.6.3-118) and on dmrs-Type and maxLength (DMRS-UplinkConfig, Table 4.6.3-51); 3 bits (transform precoder disabled) or 2 bits (transform precoder enabled) for DMRS type 1 and len1 |   |   |  |

| Condition                  | Explanation   |
|----------------------------|---|
| 2TX_UL_MIMO                | UL-MIMO test cases with 2 Tx antenna ports  |
| PTRS_UL_CONFIG             | When PTRS Uplink is configured  |
| TRANSFORM_PRECODER_ENABLED | Transform precoding is enabled (PUSCH_Config, Table 4.6.3-118)                    |
| SUL                        | On the SUL carrier when supplementary carrier is configured                       |
| ULFPTx_Mode1               | UL-MIMO test cases with UEs supporting UL full power transmission Mode-1          |
| ULFPTx_Mode2               | UL-MIMO test cases with UEs supporting UL full power transmission Mode-2          |
| ULFPTx_ModeFull            | UL-MIMO test cases with UEs supporting UL full power transmission Mode-full power |

#### 4.3.6.1.2 Physical layer parameters for scheduling of PDSCH

##### 4.3.6.1.2.1 Physical layer parameters for DCI format 1\_0

DCI format 1\_0 is used for the scheduling of PDSCH in one cell.

Default physical layer parameters for DCI format 1\_0 are specified in table 4.3.6.1.2.1-1 to 4.3.6.1.2.1-4.

**Table 4.3.6.1.2.1-1: Physical layer parameters for DCI format 1\_0**

| Parameter                               | Value   | Value in binary            |
|---|---|----------------------------|
| Identifier for DCI formats              | Indicating a DL DCI format  | "01"                       |
| Frequency domain resource assignment    | Dependent on test parameters  | -                          |
| Time domain resource assignment         | Indicating the first entry of PDSCH-TimeDomainResourceAllocationList to be used   | "0000"                     |
| VRB-to-PRB mapping                      | Non-interleaved   | "0"                        |
| Modulation and coding scheme            | Dependent on test parameters  | -                          |
| New data indicator                      | Set for every data transmission/retransmission according to the rules specified in TS 38.321  | -                          |
| Redundancy version                      | Dependent on test parameters  | -                          |
| HARQ process number                     | Dependent on test parameters  | -                          |
| Downlink assignment index               | Dependent on test parameters  | -                          |
| TPC command for scheduled PUCCH         | 0 dB (accumulated TPC) as per Table 7.2.1-1 in TS 38.213  | "01"                       |
| PUCCH resource indicator                | <i>PUCCH-ResourceId[7]</i> = 6 in pucch-ResourceSetID[1] or <i>PUCCH-ResourceId[7]</i> = 14 in pucch-ResourceSetID[2] as defined in Table 4.6.3-112 (Mapping as per Table 9.2.3-2 in TS 38.213) | "110"                      |
| PDSCH-to-HARQ_feedback timing indicator | K <sub>1</sub> slots as specified in 9.2.3 in TS 38.213<br>μ=0 (SCS=15kHz): K <sub>1</sub> =7<br>μ=1 (SCS=30kHz): K <sub>1</sub> =5<br>μ=3 (SCS=120kHz): K <sub>1</sub> =8                      | '110'B<br>'100'B<br>'111'B |

**Table 4.3.6.1.2.1-2: Physical layer parameters for DCI format 1\_0 for paging**

| Parameter                            | Value   | Value in binary |
|--------------------------------------|---|-----------------|
| Short Messages Indicator             | Only scheduling information for Paging is present in the DCI                    | "01"            |
| Short Messages                       | Reserved  | -               |
| Frequency domain resource assignment | Dependent on test parameters  | -               |
| Time domain resource assignment      | Indicating the first entry of PDSCH-TimeDomainResourceAllocationList to be used | "0000"          |
| VRB-to-PRB mapping                   | Non-interleaved   | "0"             |
| Modulation and coding scheme         | Dependent on test parameters  | -               |
| TB scaling                           | Scaling factor S=1 as defined in Table 5.1.3.2-2 in TS 38.214)                  | "00"            |
| Reserved bits                        | Reserved 6 bits   | -               |

**Table 4.3.6.1.2.1-3: Physical layer parameters for DCI format 1\_0 for SI**

| Parameter                            | Value   | Value in binary | Condition |
|--------------------------------------|---|-----------------|-----------|
| Frequency domain resource assignment | Dependent on test parameters  | -               | -         |
| Time domain resource assignment      | Indicating the first entry of Table 5.1.2.1.1-2 in TS 38.214 [21] to be used    | "0000"          | SIB1      |
|                                      | Indicating the first entry of PDSCH-TimeDomainResourceAllocationList to be used | "0000"          | SI        |
| VRB-to-PRB mapping                   | Non-interleaved   | "0"             | -         |
| Modulation and coding scheme         | Dependent on test parameters  | -               | -         |
| Redundancy version                   | Dependent on test parameters  | -               | -         |
| System information indicator         | SIB1  | "0"             | SIB1      |
|                                      | SI message  | "1"             | SI        |
| Reserved bits                        | Reserved 15 bits  | -               | -         |

| Condition | Explanation                      |
|-----------|----------------------------------|
| SIB1      | Used for DCI format 1_0 for SIB1 |
| SI        | Used for DCI format 1_0 for SI   |

**Table 4.3.6.1.2.1-4: Physical layer parameters for DCI format 1\_0 for random access**

| Parameter                            | Value   | Value in binary |
|--------------------------------------|---|-----------------|
| Frequency domain resource assignment | Dependent on test parameters  | -               |
| Time domain resource assignment      | Indicating the first entry of PDSCH-TimeDomainResourceAllocationList to be used | "0000"          |
| VRB-to-PRB mapping                   | Non-interleaved   | "0"             |
| Modulation and coding scheme         | Dependent on test parameters  | -               |
| Redundancy version                   | Dependent on test parameters  | -               |
| TB scaling                           | Scaling factor S=[1] as defined in Table 5.1.3.2-2 in TS 38.214)                | "00"            |
| Reserved bits                        | Reserved 16 bits  | -               |

#### 4.3.6.1.2.2 Physical layer parameters for DCI format 1\_1

DCI format 1\_1 is used for the scheduling of PDSCH in one cell.

Default physical layer parameters for DCI format 1\_1 are specified in table 4.3.6.1.2.2-1.

**Table 4.3.6.1.2.2-1: Physical layer parameters for DCI format 1\_1**

| Parameter                               | Value   | Value in binary         | Condition |
|---|---|-------------------------|-----------|
| Carrier indicator                       | Not present   | -                       |           |
| Identifier for DCI formats              | Indicating a DL DCI format  | "1"                     |           |
| Bandwidth part indicator                | Not present   | -                       |           |
| Frequency domain resource assignment    | Dependent on test parameters  | -                       |           |
| Time domain resource assignment         | Indicating the first entry of PDSCH-TimeDomainResourceAllocationList to be used   | "0000"                  |           |
| VRB-to-PRB mapping                      | Non-interleaved   | "0"                     |           |
| PRB bundling size indicator             | Not present (semi-static PRB_bundling)  | -                       |           |
| Rate matching indicator                 | Not present   | -                       |           |
| ZP CSI-RS trigger                       | Not present   | -                       |           |
| Modulation and coding scheme (TB1)      | Dependent on test parameters  | -                       |           |
| New data indicator (TB1)                | Set for every data transmission/retransmission according to the rules specified in TS 38.321 [20]   | -                       |           |
| Redundancy version (TB1)                | Dependent on test parameters  | -                       |           |
| Modulation and coding scheme (TB2)      | Dependent on test parameters  | -                       |           |
| New data indicator (TB2)                | Set for every data transmission/retransmission according to the rules specified in TS 38.321 [20]   | -                       |           |
| Redundancy version (TB2)                | Dependent on test parameters  | -                       |           |
| HARQ process number                     | Dependent on test parameters  | -                       |           |
| Downlink assignment index               | Dependent on test parameters  | -                       |           |
| TPC command for scheduled PUCCH         | 0 dB (accumulated TPC) as per Table 7.2.1-1 in TS 38.213 [22]   | "01"                    |           |

| Condition    | Explanation  |
|--------------|--|
| RF_FR1_15kHz | RF testing in TS 38.521-x for FR1. SCS is set to 15kHz.          |
| RF_FR1_30kHz | RF testing in TS 38.521-x for FR1. SCS is set to 30kHz.          |
| RF_FR1_60kHz | RF testing in TS 38.521-x for FR1. SCS is set to 60kHz.          |
| RF_FR2_DL    | RF testing in TS 38.521-x for FR2. SCS is set to 60kHz or 120kHz |

#### 4.3.6.1.3      Void

## 4.4      Reference system configurations

The reference system configurations specified in this sub clause apply to all test cases unless otherwise specified.

### 4.4.1      Simulated network scenarios

The simulated network scenarios will simulate UE operation in either standalone NR, standalone E-UTRA or in non-standalone NR and E-UTRA networks. For non-standalone case either the NR or the E-UTRA radio access acts as the master anchor node. For both standalone and non-standalone cases, the simulated networks may be single mode networks (FDD or TDD) or dual mode networks (FDD+TDD). For the standalone NR case the simulated networks may also be inter-RAT networks ((FDD or TDD) + (E-UTRA FDD or E-UTRA TDD)).

Simulated network scenarios to be tested are listed in this sub clause.

NOTE 1: The number of cells specified does not necessarily correspond to the maximum number of resources to be configured simultaneously in test equipment. Please refer to clause 6.1 for such information.

NOTE 2: For NAS test cases see sub clause 6.3.2.

#### 4.4.1.1      Standalone cell network scenarios

##### 4.4.1.1.1      Standalone E-UTRA single cell and multi cell network scenarios

For standalone E-UTRA FDD or TDD single cell environment see TS 36.508 [2], clause 4.4.1.1.

For standalone E-UTRA FDD or TDD multi cell network scenarios see TS 36.508 [2], clause 4.4.1.2.

##### 4.4.1.1.2      Standalone NR single cell network scenarios

For standalone NR FDD or TDD single cell environment, NR Cell 1 is used.

##### 4.4.1.1.3      Standalone NR single mode multi cell network scenarios

For standalone NR FDD or TDD intra-frequency multi cell environment, NR Cell 1, NR Cell 2 and NR Cell 4 are used.

For standalone NR FDD or TDD inter-frequency multi cell environment, NR Cell 1, NR Cell 3 and NR Cell 6 are used.

For standalone NR FDD or TDD inter-band cell environment, NR Cell 1 and NR Cell 10 are used.

For standalone NR FDD or TDD multi tracking area intra-frequency multi cell environment, NR Cell 1 and NR Cell 11 are used.

For standalone NR FDD or TDD multi tracking area inter-frequency multi cell environment, NR Cell 1 and NR Cell 23 are used.

For standalone NR FDD or TDD multi PLMN inter-frequency multi cell environment, NR Cell 1, NR Cell 12, NR Cell 13 and NR Cell 14 are used.

##### 4.4.1.1.4      Standalone NR dual mode multi cell network scenarios

For standalone NR FDD and TDD multi cell environment, NR Cell 1, NR Cell 10 and NR Cell 31 are used.

For standalone NR FDD and TDD multi PLMN multi cell environment, NR Cell 1, NR Cell 28, NR Cell 29 and NR Cell 30 are used.

In addition, standalone NR single mode multi cell network scenarios defined in clause 4.4.1.1.3 are combined with the dual mode scenarios defined in this clause when additional intra or inter-frequency cells are used.

#### 4.4.1.1.5 Standalone NR 3GPP Inter-RAT network scenarios

For standalone NR FDD or TDD single cell with E-UTRA FDD or E-UTRA TDD single cell inter-RAT environment:

- NR Cell 1 is used for the NR cell; and
- Cell 1, as specified in TS 36.508 [2] clause 4.4.1.1, is used for the E-UTRA cell.

For standalone NR FDD or TDD single cell with E-UTRA FDD or E-UTRA TDD multi cell inter-RAT environment:

- NR Cell 1 is used for the NR cell; and
- Cell 1, Cell 2 and Cell 4, as specified in TS 36.508 [2] clause 4.4.1.2, is used for the E-UTRA cell; and

#### 4.4.1.2 Non-standalone cell network scenarios

##### 4.4.1.2.1 Non-standalone E-UTRA single cell and NR single cell network scenarios

For non-standalone NR FDD or TDD single cell and E-UTRA FDD or TDD single cell environment:

- Cell 1, as specified in TS 36.508 [2] clause 4.4.1.1, is used for the E-UTRA cell; and
- NR Cell 1 is used for the NR cell.

##### 4.4.1.2.2 Non-standalone E-UTRA single cell and NR single mode multi cell network scenarios

For non-standalone E-UTRA single cell and FDD or TDD NR intra-frequency single mode multi cell environment:

- Cell 1, as specified in TS 36.508 [2] clause 4.4.1.1, is used for the E-UTRA cell; and
- NR Cell 1, NR Cell 2 and NR Cell 4 are used for NR cells.

For non-standalone E-UTRA single cell and FDD or TDD NR inter-frequency single mode multi cell environment:

- Cell 1, as specified in TS 36.508 [2] clause 4.4.1.1, is used for the E-UTRA cell; and
- NR Cell 1, NR Cell 3 and NR Cell 6 are used for the NR cells.

For non-standalone E-UTRA single cell and FDD or TDD NR inter-band single mode multi cell environment:

- Cell 1, as specified in TS 36.508 [2] clause 4.4.1.1, is used for the E-UTRA cell; and
- NR Cell 1 and NR Cell 10 are used for the NR cells.

##### 4.4.1.2.3 Non-standalone E-UTRA single mode multi cell and NR single mode multi cell network scenarios

For non-standalone E-UTRA intra-frequency single mode multi cell and FDD or TDD NR intra-frequency single mode multi cell environment:

- E-UTRA Cell 1, Cell 2 and Cell 4, as specified in TS 36.508 [2] clause 4.4.1.2, is used for the E-UTRA cell; and
- NR Cell 1, NR Cell 2 and NR Cell 4 are used for NR cells.

For non-standalone FDD or TDD E-UTRA intra-frequency single mode multi cell and FDD or TDD NR inter-frequency single mode multi cell environment:

- E-UTRA Cell 1, Cell 2 and Cell 4, as specified in TS 36.508 [2] clause 4.4.1.2, is used for the E-UTRA cell; and
- NR Cell 1, NR Cell 3 and NR Cell 6 are used for the NR cells.

For non-standalone FDD or TDD E-UTRA inter-frequency single mode multi cell and FDD or TDD NR inter-frequency single mode multi cell environment:

- E-UTRA Cell 1, Cell 3 and Cell 6, as specified in TS 36.508 [2] clause 4.4.1.2, is used for the E-UTRA cell; and
- NR Cell 1, NR Cell 3 and NR Cell 6 are used for the NR cells.

For non-standalone single E-UTRA cell and FDD or TDD NR inter-band single mode multi cell environment:

- E-UTRA Cell 1, Cell 2 and Cell 4, as specified in TS 36.508 [2] clause 4.4.1.2, is used for the E-UTRA cell; and
- NR Cell 1 and NR Cell 10 are used for the NR cells.

#### 4.4.1.2.4 Non-standalone E-UTRA single cell and NR dual mode multi cell network scenarios

**Editor's note: It is FFS if the NR dual mode multi cell environment needs to include multiple E-UTRA cells in addition to the multiple NR cells.**

For non-standalone single E-UTRA cell and FDD and TDD NR dual mode multi cell environment:

- Cell 1, as specified in TS 36.508 [2] clause 4.4.1.1, is used for the E-UTRA cell; and
- NR Cell 1, NR Cell 10 and NR Cell 31 are used for the NR cells.

In addition, standalone NR single mode multi cell network scenarios defined in clause 4.4.1.2.2 are combined with the dual mode scenarios defined in this clause when additional intra or inter-frequency NR cells are used.

#### 4.4.1.3 Non-3GPP Accessss network scenarios

##### 4.4.1.3.1 WLAN network scenario

For non-3GPP access over WLAN single cell environment Cell 27, as specified in TS 36.508 [2] clauses 4.4.2 and 4.4.8 with condition 'TMSoWLAN' is used.

## 4.4.2 Simulated cells

NOTE 1: For NAS test cases see clause 6.3.2.

NOTE 2: Test frequency and range defined in table 4.4.2-1 do not apply to TS 38.521-1, TS 38.521-2 and TS 38.521-3 test cases.

Test frequencies and simulated NR cells are defined in table 4.4.2-1. Test frequencies and simulated E-UTRA cells are defined in TS 36.508 [2] table 4.4.2-1.

For NR cells, NRf1 is the default test frequency. For E-UTRA cells, f1 as specified in TS 36.508 [2] table 4.2.2-1 is the default test frequency.

Default parameters for simulated NR cells are specified in table 4.4.2-1A and table 4.4.2-2.

Default parameters for simulated E-UTRA cells are specified in TS 36.508 [2] table 4.4.2-1A and table 4.4.2-2.

Common parameters for NR simulated cells are specified in clauses 4.4.3 to 4.4.6A.

Common parameters for E-UTRA simulated cells are specified in TS 36.508 [2] clauses 4.4.3 to 4.4.6A.

Other cell specific parameters are specified in clause 4.4.7.

**Table 4.4.2-1: Definition of test frequencies and simulated NR cells**

| <b>Test frequency</b> | <b>RAT</b> | <b>Operating band</b>               | <b>Range</b>                | <b>Simulated NR cells</b>   |
|-----------------------|------------|-------------------------------------|-----------------------------|---|
| NRf1                  | NR         | Operating band under test           | Mid<br>(Note 1,<br>Note 3)  | NR Cell 1, NR Cell 2, NR Cell 4, NR Cell 11 (Note 2), NR Cell 489 |
| NRf2                  | NR         | Operating band under test           | High<br>(Note 1,<br>Note 3) | NR Cell 3, NR Cell 12, NR Cell 23                                 |
| NRf3                  | NR         | Operating band under test           | Low<br>(Note 1,<br>Note 3)  | NR Cell 6, NR Cell 13   |
| NRf4                  | NR         | Operating band under test           | (Note 1)                    | NR Cell 14  |
| NRf5                  | NR         | Operating band for inter-band cells | Mid<br>(Note 1)             | NR Cell 10, NR Cell 30, NR Cell 31                                |
| NRf6                  | NR         | Operating band for inter-band cells | High<br>(Note 1)            | NR Cell 28, NR Cell 29  |
| NRf7                  | NR         | Operating band for inter-band cells | Low<br>(Note 1)             |   |
| NRf8                  | NR         | Operating band for SDL cell         | Mid<br>(note 1)             | NR Cell 32  |
| NRf9                  | NR         | Operating band for SUL cell         | Mid<br>(note 1)             | NR Cell 33  |

Note 1: For signalling test, see clause 6.2.3.  
 Note 2: For signalling test, simultaneous co-existence of NR Cell 2 with NR Cell 11 is not allowed due to the same timing is used for Cell 2 and Cell 11 in 38.523-3 [23].  
 Note 3: For RRM test with NR intra-band non-contiguous CA, the test frequencies for the set of non-contiguous component carriers are specified in clauses 4.3.1.1.4 for FR1 and in clause 4.3.1.2.4 for FR2 without any regard to range. Thus "Low", "Mid" and "High" information in this table does not apply. Unless otherwise stated, test point with maximum Wgap is chosen.

**Table 4.4.2-2: Default NR parameters for simulated NR cells**

| cell ID    | NR Cell Identifier                           |                    | Physical layer cell identity | PRACH-rootSequenceIndex FDD | PRACH-rootSequenceIndex TDD | SSB-Index <sup>2</sup> |
|------------|--|--------------------|------------------------------|-----------------------------|-----------------------------|------------------------|

| Note 1: The value(s) in the column TA# list indicates TAI(s) included in the response messages of the registration procedure (REGISTRATION ACCEPT) when the UE performs the registration procedure on a corresponding cell. |               |          |     |                      |                  |            |             |         |  |  |
| Note 2: The value in the column 5G-GUTI indicates 5G-GUTI included in the response messages of the registration procedure (REGISTRATION ACCEPT) when the UE performs the registration procedure on a corresponding cell.    |               |          |     |                      |                  |            |             |         |  |  |
| Note 3: Set to the same Mobile Country Code and Mobile Network Code stored in EF <sub>IMSI</sub> on the test USIM card (subclause 4.9.3).   |               |          |     |                      |                  |            |             |         |  |  |

#### 4.4.3 Common parameters for simulated NR cells

The parameters specified in this sub clause apply to the simulated NR cells in standalone NR and non-standalone network scenarios unless otherwise specified.

The common parameters for the simulated E-UTRA cells for standalone E-UTRA and non-standalone network scenarios are specified in TS 36.508 [2] clause 4.4.3 unless otherwise specified.

#### 4.4.3.1 Common configurations of system information blocks

##### 4.4.3.1.1 Combinations of system information blocks for E-UTRA standalone, EN-DC and NGEN-DC

The combination of system information blocks for standalone E-UTRA, EN-DC and NGEN-DC network scenarios are specified in TS 36.508 [2] clause 4.4.3.1.

For EN-DC and NGEN-DC network scenarios the SS shall in addition to broadcasting the E-UTRA system information blocks also broadcast the NR MIB on the NR cell(s).

##### 4.4.3.1.2 Combinations of system information blocks for NR standalone and NE-DC

The combination of system information blocks required by a test case depends on the test case scenario. In this clause, several combinations of system information blocks are defined.

Regardless of the combination of system information blocks indicated as being used by a test case, the SS shall broadcast only the NR MIB on the NR Cell(s) configured on an SDL band.

Combination NR-1 is the default combination which applies to the following test case scenarios:

- NR FDD single cell scenario
- NR TDD single cell scenario

Combination NR-2 applies to the following test case scenarios:

- NR FDD intra-frequency multi cell scenario
- NR TDD intra-frequency multi cell scenario
- NR FDD and NR TDD dual mode multi cell roaming scenario

Combination NR-3 applies to the following test case scenarios:

- NR FDD intra-frequency multi cell scenario with neighbouring cell related information
- NR TDD intra-frequency multi cell scenario with neighbouring cell related information

Combination NR-4 applies to the following test case scenarios:

- NR FDD inter-frequency multi cell scenario
- NR TDD inter-frequency multi cell scenario
- NR FDD inter-band multi cell scenario
- NR TDD inter-band multi cell scenario
- NR FDD and NR TDD dual mode multi cell non-roaming scenario
- NR FDD intra-band carrier aggregation component carriers cell scenario
- NR FDD inter-band carrier aggregation component carriers cell scenario
- NR TDD intra-band carrier aggregation component carriers cell scenario
- NR FDD and NR TDD inter-band carrier aggregation component carriers cell scenario

Combination NR-5 applies to the following test case scenarios:

- NR FDD intra-band carrier aggregation component carriers cell scenario + NR FDD intra-frequency neighbour.
- NR FDD inter-band carrier aggregation component carriers cell scenario+ NR FDD intra-frequency neighbour.
- NR TDD intra-band carrier aggregation component carriers cell scenario+ NR FDD intra-frequency neighbour.

- NR FDD and NR TDD inter-band carrier aggregation component carriers cell scenario+ NR FDD intra-frequency neighbour.

Combination NR-6 applies to the following test case scenarios:

- 3GPP inter-RAT NR FDD + E-UTRA FDD multi cell scenario
- 3GPP inter-RAT NR TDD + E-UTRA TDD multi cell scenario
- 3GPP inter-RAT NR TDD + E-UTRA FDD multi cell scenario

Combination NR-7 applies to the following test case scenarios:

- NR FDD inter-frequency + 3GPP inter-RAT E-UTRA multi-cell scenario
- NR TDD inter-frequency + 3GPP inter-RAT E-UTRA multi-cell scenario

Combination NR-8 applies to the following test case scenarios:

- NR FDD ETWS single cell scenario
- NR TDD ETWS single cell scenario

Combination NR-9 applies to the following test case scenarios:

- 3GPP NR FDD + CMAS single cell scenario
- 3GPP NR TDD + CMAS single cell scenario

Combination NR-10 applies to the following test case scenarios:

- 3GPP NR FDD + ETWS primary notification single cell scenario
- 3GPP NR TDD + ETWS primary notification single cell scenario

Combination NR-11 applies to the following test case scenarios:

- 3GPP NR FDD + ETWS secondary notification single cell scenario
- 3GPP NR TDD + ETWS secondary notification single cell scenario

**Table 4.4.3.1.2-1: Combinations of system information blocks**

| <b>Combination No.</b> | <b>System information block type</b> |             |             |             |             |             |             |             |

| NR-2                   | X                                    | X           |             |             |             |             |             |             |
| NR-3                   | X                                    | X           | X           |             |             |             |             |             |
| NR-4                   | X                                    | X           |             | X           |             |             |             |             |
| NR-5                   | X                                    | X           | X           | X           |             |             |             |             |
| NR-6                   | X                                    | X           |             |             | X           |             |             |             |
| NR-7                   | X                                    | X           |             | X           | X           |             |             |             |
| NR-8                   | X                                    |             |             |             |             | X           | X           |             |
| NR-9                   | X                                    |             |             |             |             |             |             | X           |
| NR-10                  | X                                    |             |             |             |             | X           |             |             |
| NR-11                  | X                                    |             |             |             |             |             | X           |             |

#### 4.4.3.1.3 Scheduling of system information blocks

The scheduling configurations for combinations of system information blocks are defined in the following tables. There is no scheduling information for combination NR-1.

**Table 4.4.3.1.3-1: Scheduling for combination NR-2**

| Scheduling Information No. | Periodicity [radio frames] | Mapping of system information blocks |
|----------------------------|----------------------------|--------------------------------------|
| 1                          | 32                         | SIB2                                 |

**Table 4.4.3.1.3-2: Scheduling for combination NR-3**

| Scheduling Information No. | Periodicity [radio frames] | Mapping of system information blocks |
|----------------------------|----------------------------|--------------------------------------|
| 1                          | 32                         | SIB2                                 |
| 2                          | 64                         | SIB3                                 |

**Table 4.4.3.1.3-3: Scheduling for combination NR-4**

| Scheduling Information No. | Periodicity [radio frames] | Mapping of system information blocks |
|----------------------------|----------------------------|--------------------------------------|
| 1                          | 32                         | SIB2                                 |
| 2                          | 64                         | SIB4                                 |

**Table 4.4.3.1.3-4: Scheduling for combination NR-5**

| Scheduling Information No. | Periodicity [radio frames] | Mapping of system information blocks |

## 4.4A Test states

### 4.4A.1 General

The purpose of the test states is to get the UE into specific 5GC and RRC protocol states in the initial condition of test cases. Each test state is identified by a test state ID. The syntax used for test state IDs is described in sub-clause 4.4A.4. The list of defined test states and the associated UE 5GC and RRC/ N3AN protocol states are specified in sub-clause 4.4A.2.

A test case may request that one or more test functions and/or configurations are activated/configured by the SS as part of the procedure used for the requested test state. The test case requests the additional test functions and/or configurations by specifying one or more test state parameters. The list of defined test state parameters is specified in sub-clause 4.4A.3.

### 4.4A.2 Test states and associated 5GC and RRC protocol states

**Table 4.4A.2-0: 5GC and RRC/N3AN protocol states for UE Switched Off**

| 5GS state ID | Connectivity | RRC/N3AN state | 5GMM modes | 5GMM sublayer | 5GSM sublayer | Comments  |
|--------------|--------------|----------------|------------|---------------|---------------|---|
| 0-A          | -            | -              | -          | -             | -             | UE switched off. No change to PLMN stored in the USIM       |
| ON-B         | NR           | -              | -          | -             | -             | UE switched off with the PLMN under test stored in the USIM |
| 0E-B         | E-UTRA       | -              | -          | -             | -             |   |
| 0W-B         | WLAN         | -              | -          | -             | -             |   |

**Table 4.4A.2-1: 5GC and RRC/N3AN protocol states for IDLE**

| 5GS state ID | Connectivity | RRC/N3AN state      | 5GMM modes | 5GMM sublayer   | 5GSM sublayer        |
|--------------|--------------|---------------------|------------|-----------------|----------------------|
| 1N-A         | NR           | NR RRC_IDLE         | 5GMM-IDLE  | 5GMM-REGISTERED | PDU SESSION INACTIVE |
|              |              |                     |            |                 | PDU SESSION ACTIVE   |
| 1E-A         | E-UTRA       | EUTRA RRC_IDLE      | 5GMM-IDLE  | 5GMM-REGISTERED | PDU SESSION INACTIVE |
|              |              |                     |            |                 | PDU SESSION ACTIVE   |
| 1W-A         | WLAN         | Ipsec_SA_Rereleased | 5GMM-IDLE  | 5GMM-REGISTERED | PDU SESSION INACTIVE |
|              |              |                     |            |                 | PDU SESSION ACTIVE   |

**Table 4.4A.2-2: 5GC and RRC protocol states for INACTIVE**

| 5GS state ID | Connectivity | RRC state          | 5GMM modes     | 5GMM sublayer   | 5GSM sublayer        |
|--------------|--------------|--------------------|----------------|-----------------|----------------------|
| 2N-A         | NR           | NR RRC_INACTIVE    | 5GMM-CONNECTED | 5GMM-REGISTERED | PDU SESSION INACTIVE |
|              |              |                    |                |                 | PDU SESSION ACTIVE   |
| 2E-A         | E-UTRA       | EUTRA RRC_INACTIVE | 5GMM-CONNECTED | 5GMM-REGISTERED | PDU SESSION INACTIVE |
|              |              |                    |                |                 | PDU SESSION ACTIVE   |

**Table 4.4A.2-3: 5GC and RRC/N3AN protocol states for CONNECTED**

| 5GS state ID | Connectivity | RRC/N3AN state       | 5GMM modes     | 5GMM sublayer   | 5GSM sublayer        |
|--------------|--------------|----------------------|----------------|-----------------|----------------------|
| 3N-A         | NR           | NR RRC_CONNECTED     | 5GMM-CONNECTED | 5GMM-REGISTERED | PDU SESSION INACTIVE |
|              |              |                      |                |                 | PDU SESSION ACTIVE   |
| 3E-A         | E-UTRA       | EUTRA RRC_CONNECTED  | 5GMM-CONNECTED | 5GMM-REGISTERED | PDU SESSION INACTIVE |
|              |              |                      |                |                 | PDU SESSION ACTIVE   |
| 3W-A         | WLAN         | Ipsec_SA_Established | 5GMM-CONNECTED | 5GMM-REGISTERED | PDU SESSION INACTIVE |
|              |              |                      |                |                 | PDU SESSION ACTIVE   |

### 4.4A.3 Test state parameters

Table 4.4A.3-1 lists the test functions and configurations that a test case can request to be activated/configured. A test case requests a test function or configuration to be used in the preamble by including the test state parameter text in the preamble statement of the test case in *italics*.

Editor's Note: The test state parameters are currently limited to test functions required by standalone NR. Additional test state parameters will be added in future as needed. E.g. for EN-DC, NE-DC and NGEN-DC there will be a need for parameters for bearer type (MCG and SCG, MCG and split or MCG only).

**Table 4.4A.3-1: Test state parameters**

| <b>Test state parameter</b>                 | <b>Description</b>  |
|---|---|
| <i>UE test loop mode &lt;X&gt; prepared</i> | If included the UE test mode is activated in the preamble indicating that UE test loop mode <X> will be activated in the test case test procedure, where <X> is A or B.<br>(Note 1, Note 2, Note 3) |
| <i>UE test loop mode &lt;X&gt; active</i>   | If included the UE Test Mode and UE test loop mode <X> will be activated in the preamble, where <X> is A or B.<br>(Note 1, Note 2, Note 3)  |
| Note 1:                                     | See TS 38.509 [11], clause 5.2.2 for details of UE test mode.   |
| Note 2:                                     | See TS 38.509 [11], clause 5.3.4.1 for details of UE test loop mode A.  |
| Note 3:                                     | See TS 38.509 [11], clause 5.3.4.2.2 for details of UE test loop mode B.  |

#### 4.4A.4 Test state ID syntax

A test state ID is defined as:

<RRC state><Connectivity>-<Variant>

, where <RRC state>, <Connectivity> and <Variant> are defined in Table 4.4A.2-1.

**Table 4.4A.4-1: Test state fields**

| <b>Test state field</b> | <b>Value</b> | <b>Description</b>   |
|-------------------------|--------------|--|
| <RRC state>             | 0            | Indicates that the requested test state will end up in SWITCHED_OFF state.                                 |
|                         | 1            | Indicates that the requested test state will end up in RRC_IDLE/Ipsec_SA Released state.                   |
|                         | 2            | Indicates that the requested test state will end up in RRC_INACTIVE state.                                 |
|                         | 3            | Indicates that the requested test state will end up in RRC_CONNECTED/Ipsec_SA Released state.              |
| <Connectivity>          | E            | E-UTRA is used as the initial access.  |
|                         | N            | NR is used as the initial access.  |
|                         | W            | Un trusted non 3GPP Access over WLAN is used as the initial access   |
| <Variant>               | A            | A, B, C etc. used to represent different variants within a <RRC state><Connectivity> group of test states. |

#### 4.4A.5 Mapping of test state IDs and test parameters to generic procedures, generic procedure parameters and specific message conditions

Depending on the test case preamble requested test state ID and test parameters the SS shall:

- 1> use the applicable generic procedure as specified in Table 4.4A.5-1 using the:
- 2> applicable generic procedure parameters as specified in Table 4.4A.5-1 and Table 4.4A.5-2; and
- 2> applicable message conditions as specified in Table 4.4A.5-2.

**Table 4.4A.5-1: Test state ID mapping to generic procedures and Connectivity generic procedure parameter**

| Test state ID   |                    |               | Generic Procedure    |                                      |        |
|-----------------|--------------------|---------------|----------------------|--------------------------------------|--------|
| RRC state field | Connectivity field | Variant field | Name                 | Generic procedure parameter (Note 1) | Clause |
| 0               | -                  | A             | SWITCHED_OFF         |                                      | 4.5.5  |
| 0               | N                  | B             | SWITCHED_OFF         | Connectivity=NR                      | 4.5.5  |
| 0               | E                  | B             | SWITCHED_OFF         | Connectivity=E-UTRA                  | 4.5.5  |
| 0               | W                  | B             | SWITCHED_OFF         | Connectivity=WLAN                    | 4.5.5  |
| 1               | N                  | A             | RRC_IDLE             | Connectivity=NR                      | 4.5.2  |
| 1               | E                  | A             | RRC_IDLE             | Connectivity=E-UTRA                  | 4.5.2  |
| 1               | W                  | A             | Ipsec_SA_Released    | Connectivity=WLAN                    | 4.5.2  |
| 2               | N                  | A             | RRC_INACTIVE         | Connectivity=NR                      | 4.5.3  |
| 2               | E                  | A             | RRC_INACTIVE         | Connectivity=E-UTRA                  | 4.5.3  |
| 3               | N                  | A             | RRC_CONNECTED        | Connectivity=NR                      | 4.5.4  |
| 3               | E                  | A             | RRC_CONNECTED        | Connectivity=E-UTRA                  | 4.5.4  |
| 3               | W                  | A             | Ipsec_SA_Established | Connectivity=WLAN                    | 4.5.4  |

Note 1: In addition to the Connectivity parameter specified in this table the applicable additional generic procedure parameters and conditions as stated in Table 4.4A.5-2 shall be used

**Table 4.4A.5-2: Additional generic procedure parameters and message conditions**

| Test state parameter                | Additional generic procedure parameter(s) | Specific message conditions          |                     |
|-------------------------------------|---|--------------------------------------|---------------------|
|                                     |   | Message                              | Condition           |
| <i>UE test loop mode A prepared</i> | Test Mode=On                              | Note 1                               | Note 1              |
| <i>UE test loop mode B prepared</i> | Test Mode=On                              | ACTIVATE UE TEST MODE<br>(Table FFS) | UE test loop mode B |
| <i>UE test loop mode A active</i>   | Test Loop Function=On                     | Note 1                               | Note 1              |
| <i>UE test loop mode B active</i>   | Test Loop Function=On                     | ACTIVATE UE TEST MODE<br>(Table FFS) | UE test loop mode B |
|                                     |   | CLOSE UE TEST LOOP<br>(Table FFS)    | UE test loop mode B |

Note 1: For test state parameters *UE test loop mode A prepared* and *UE test loop mode A active* there is no specific message conditions needed as the default UE test loop mode in the messages ACTIVATE UE TEST MODE and CLOSE UE TEST LOOP is UE test loop mode A.

## 4.5 Generic procedures

### 4.5.1 General

The generic procedures are used by test cases to get UE under test into SWITCHED\_OFF, RRC\_IDLE/Ipsec SA not established, RRC\_INACTIVE or RRC\_CONNECTED/Ipsec SA established state.

A test case controls the SS by specifying the required RRC state and a set of generic procedure parameters applicable for the intended testing.

The connectivity *EN-DC* is MR-DC via E-UTRA-NR Dual Connectivity. This is a UE connected to the EPC. The connectivity *E-UTRA/5GC*, *NR*, *NGEN-DC*, *NE-DC* and *NR-DC* are all a UE connected to the 5GC.

The connectivity *E-UTRA/EPC* is E-UTRA connected to the EPC as specified in the present document.

**Table 4.5.1-1: Generic procedure parameters**

| Parameter    | Values            | Description             | Parameter condition |
|--------------|-------------------|-------------------------|---------------------|
| Connectivity | <i>E-UTRA/5GC</i> | E-UTRA connected to 5GC | Mandatory           |

|  |                         |   |   |
|--|-------------------------|---|---|
|  | <i>NR</i>               | NR connected to 5GC   |   |
|  | <i>EN-DC</i>            | E-UTRA-NR Dual Connectivity with E-UTRA connected to EPC  |   |
|  | <i>NGEN-DC</i>          | E-UTRA-NR Dual Connectivity with E-UTRA connected to 5GC  |   |
|  | <i>NE-DC</i>            | NR E-UTRA Dual Connectivity   |   |
|  | <i>NR-DC</i>            | NR-NR Dual Connectivity   |   |
|  | <i>WLAN</i>             | Un trusted non 3GPP access over WLAN  |   |
|  | <i>E-UTRA/EPC</i>       | E-UTRA connected to EPC   |   |
| Bearers                                      | <i>MCG(s) and SCG</i>   | MCG and SCG   | Mandatory when Connectivity is set to <i>EN-DC</i> , <i>NGEN-DC</i> , <i>NE-DC</i> and <i>NR-DC</i> and when the generic procedures are used by test cases to get UE under test into RRC_CONNECTED state.<br>s=1 if MULTI_PDN= FALSE and s=2 if MULTI_PDN=TRUE.<br><i>MCG(s) only</i> is N/A when Connectivity is set to <i>NR-DC</i> .<br>N/A otherwise. |
|  | <i>MCG(s) and split</i> | MCG and split   |   |
|  | <i>MCG(s) only</i>      | MCG only  |   |
| Test Mode                                    | <i>On</i>               | UE test mode active as specified in TS 38.509 [11], clause 5.2.2.   | Optional  |
| Test Loop Function                           | <i>On</i>               | UE test mode active with one of the UE test loop modes activated as specified in TS 38.509 [11], clauses 5.2.2 and 5.3.2. | Optional  |
| Connected without release                    | <i>On</i>               | Enter RRC_Connected with Ipsec_SA_Established and without any release.  | Optional<br>N/A for <i>NR-DC</i> .  |
| Interworking without N26 interface supported | <i>On</i>               | The NWK sets the REGISTRATION ACCEPT message, IE 5GS network feature support, IWK N26 (octet 3, bit 7) = 1                | Optional,<br>Depends on test case scenario. Default message content for REGISTRATION ACCEPT is set to Interworking without N26 interface NOT supported  |

Editor's Note: The following values are not available to use in the current version of this specification because details are still FFS: Connectivity (E-UTRA/5GC, NGEN-DC and NE-DC).

## 4.5.2 RRC\_IDLE

### 4.5.2.1 Initiation

The SS shall:

- 1> if connectivity is *EN-DC*:
- 2> use 1 E-UTRA cell and 1 NR cell, default parameters;
- 2> if connected without release is not present:
  - 3> perform according to the table 4.5.2.2-1: E-UTRA RRC\_IDLE;
- 1> if connectivity is *E-UTRA/EPC*:
  - 2> use 1 E-UTRA cell, default parameters;
  - 2> perform according to the table 4.5.2.2-5: E-UTRA RRC\_IDLE Unrestricted nr PDN;
  - 2> if pc\_noOf\_PDNsNewConnection > 0

3> perform according to the table 4.5.2.2-6: E-UTRA RRC\_IDLE Unrestricted nr PDN Extension;

1> if connectivity is *NR*:

2> use 1 NR cell, default parameters;

2> perform according to the table 4.5.2.2-2: NR RRC\_IDLE;

2> if pc\_noOf\_PDUsNewConnection > 0

3> perform according to the table 4.5.2.2-4: NR RRC\_IDLE Extension;

1> if connectivity is *WLAN*:

2> use 1 WLAN cell, default parameters;

2> if connected without release is not present:

3> perform according to the table 4.5.2.2-3: WLAN Ipsec\_SA Released;

2> else:

3> Not defined:

1> if connectivity is *NR-DC*:

2> use 2 NR cells, default parameters;

2> perform according to the table 4.5.2.2-2: NR RRC\_IDLE.

**Editor's Note:** The value of specify "default parameters" is FFS. For *NR-DC* the requirement is 2 cells, but details might be required for specific test cases. For other connectivities the same assumption applies for 1 cell.

## 4.5.4 RRC\_CONNECTED

### 4.5.4.1 Initiation

The SS shall:

- 1> perform according to clause 4.5.2 RRC\_IDLE;

- 1> if connectivity is *EN-DC*:
  - 2> use 1 E-UTRA cell and 1 NR cell, default parameters;
  - 2> if connected without release is *On*:
    - 3> perform according to the table 4.5.4.2-2: RF E-UTRA RRC\_CONNECTED;
  - 2> else:
    - 3> perform according to the table 4.5.4.2-1: E-UTRA RRC\_CONNECTED;
- 1> if connectivity is *E-UTRA/EPC*:
  - 2> use 1 E-UTRA cell, default parameters;
  - 2> perform according to the table 4.5.4.2-1: E-UTRA RRC\_CONNECTED with *MCG(s)* only;
- 1> if connectivity is *NR*:
  - 2> use 1 NR cell, default parameters;
  - 2> if connected without release is not present:
    - 3> perform according to the table 4.5.4.2-3: NR RRC\_CONNECTED;
- 1> if connectivity is *WLAN*:
  - 2> use 1 WLAN cell, default parameters;
  - 2> if connected without release is not present:
    - 3> perform according to the table 4.5.4.2-4: WLAN IPsec\_SA\_Established;
  - 2> else:
    - 3> Not defined;
- 1> if connectivity is *NR-DC*:
  - 2> use 2 NR cells, default parameters;
  - 2> perform according to the table 4.5.4.2-5: NR-DC RRC\_CONNECTED;

#### 4.5.4.2 Procedures

## 4.5.5 SWITCHED\_OFF

### 4.5.5.1 Initiation

The SS shall:

- 1> if Test State ID=0-A:
- 2> Do nothing;
- 1> else if Test State ID=0N-B:
  - 2> use 1 NR cell, default parameters;
  - 2> perform the procedure according to the table 4.5.5.2-1: NR SWITCHED\_OFF\_0\_B;
- 1> else if Test State ID=0E-B:
  - 2> FFS

NOTE: The procedure for State 0N-B is used as default.

### 4.5.5.2 Procedures

**Table 4.5.5.2-1: NR SWITCHED\_OFF\_ON\_B**

| St    | Procedure                              | Message Sequence |         | TP | Verdict |
|-------|--|------------------|---------|----|---------|
|       |  | U - S            | Message |    |         |
| 1-20  | Same as table 4.5.2.2-2, steps 1-20.   | -                | -       | -  | -       |
| 21-26 | Same as table 4.9.6.1-1, steps 1a1-1b1 | -                | -       | -  | -       |

### 4.5.5.3 Specific message contents

All specific message contents shall be according clause 4.6 and 4.7.

NOTE: The procedure refers to default messages content. If a test case requires specific parameters to be set during the procedure e.g. list with ePLMN or/and TAIs is stored, new or not 5G-GUTI, etc. then, this needs to be specified in the test case, which uses the procedure.

## 4.5.6 Void

# 4.5A Auxiliary procedures

## 4.5A.1 General

## 4.5A.2 UE-requested PDU session establishment procedure

### 4.5A.2.1 Scope

The purpose of this procedure is to establish UE-requested PDU session(s).

**Table 4.5A.2.1-1: Conditions and other parameters**

| Condition                      | Explanation  |
|--------------------------------|--|
| ExpectedNumberOfNewPDUSessions | <p><b>Usage:</b> Parameter determining procedure sequence.<br/>A value for this parameter shall be provided when the procedure is called.<br/>Unless the test requires specific number of PDU sessions to be established<br/>the value should be either px_noOf_PDUsSameConnection or<br/>px_noOf_PDUsNewConnection ([23]).</p> <p><b>Meaning:</b> The number of PDU sessions which are expected to happen. Depends on the UE configuration and/or the context in which the procedure is used.</p> |
| K                              | <p><b>Usage:</b> Parameter determining procedure sequence.</p> <p><b>Meaning:</b> The number of PDU SESSION ESTABLISHMENT REQUEST messages already processed including the one that is currently being processed.</p>  |
| L                              | <p><b>Usage:</b> Parameter determining procedure sequence.</p> <p><b>Meaning:</b> The number of PDU SESSION ESTABLISHMENT REQUEST messages being received so far.</p>  |
| N                              | <p><b>Usage:</b> Parameter determining procedure sequence.<br/>The parameter is initialised with the value of<br/>ExpectedNumberOfNewPDUSessions</p> <p><b>Meaning:</b> Loop (step sequence repetition) control.</p>   |
| IMS_PDU                        | <p><b>Usage:</b> Condition determining specific message contents.</p> <p><b>Meaning:</b> PDU session establishment for IMS.<br/>Whether a PDU session is for IMS is determined by the DNN/APN type of the entry in Table 4.8.4-1 which itself has been determined by the DNN IE in the UL NAS TRANSPORT message which carried the corresponding PDU SESSION ESTABLISHMENT REQUEST or by pc_APN_Default_Configuration if the DNN IE was not present</p>   |

### 4.5A.2.2 Procedure description

#### 4.5A.2.2.1 Initial conditions

The UE is in RRC\_CONNECTED state.

## 4.5A.2.2.2 Procedure sequence

**Table 4.5A.2.2.2-1: PDU session establishment procedure**

| St   | Procedure  | Message Sequence |   | Verdict |

## 4.5A.2A UE-requested PDU session establishment procedure over Non 3GPP Access

### 4.5A.2A.1 Scope

The purpose of this procedure is to establish UE-requested PDU session.

### 4.5A.2A.2 Procedure description

#### 4.5A.2A.2.1 Initial conditions

The UE has established an IPsec security association

#### 4.5A.2A.2.2 Procedure sequence

**Table 4.5A.2A.2.2-1: PDU session establishment procedure over Non 3GPP Access**

| St | Procedure  | Message Sequence |   |
|----|--|------------------|---|
|    |  | U – S            | Message   |
| 1  | The UE transmits a PDU SESSION ESTABLISHMENT REQUEST   | ->               | 5GMM: UL NAS TRANSPORT<br>5GSM: PDU SESSION ESTABLISHMENT REQUEST |
| 2  | The SS establishes an IPsec child security association according to the IKEv2 specification in RFC 7296 [34] |                  |   |
| 3  | The SS transmits an PDU SESSION ESTABLISHMENT ACCEPT   | <-               | 5GMM: DL NAS TRANSPORT<br>5GSM: PDU SESSION ESTABLISHMENT ACCEPT  |

Note 1: The current procedure assumes UE establishes a single PDU session over Non 3GPP Access.

### 4.5A.2A.3 Specific message contents

None

## 4.5A.2B Procedure to establish multiple additional PDN connections in S1

### 4.5A.2B.1 Scope

The present procedure is intended for test scenarios where it is desirable, due to the tested requirements (e.g. intersystem change between S1 and N1 mode), to allow the UE to set up as many as it may want, and in any order, PDN connections after the first PDN connection is established during the ATTACH to EPS procedure (i.e. when the UE is operating in S1 mode).

**Table 4.5A.2B.1-1: Conditions and other parameters**

| Condition                         | Explanation  |
|-----------------------------------|--|
| ExpectedNumberOfNewPDNConnections | <p><b>Usage:</b> Parameter determining procedure sequence.<br/>A value for this parameter shall be provided when the procedure is called.<br/>Unless the test requires specific number of PDN connections to be established the value should be either pc_noOf_PDNsSameConnection or pc_noOf_PDNsNewConnection ([19]).</p> <p><b>Meaning:</b> The number of PDN connections which are expected to happen. Depends on the UE configuration and/or the context in which the procedure is used.</p> |
| K                                 | <p><b>Usage:</b> Parameter determining procedure sequence.<br/><b>Meaning:</b> The number of PDN CONNECTIVITY REQUEST messages already processed including the one that is currently being processed.</p>  |
| L                                 | <p><b>Usage:</b> Parameter determining procedure sequence.<br/><b>Meaning:</b> The number of PDN CONNECTIVITY REQUEST messages being received so far.</p>  |
| N                                 | <p><b>Usage:</b> Parameter determining procedure sequence.<br/>The parameter is initialised with the value of ExpectedNumberOfNewPDNConnections</p> <p><b>Meaning:</b> Loop (step sequence repetition) control.</p>  |

### 4.5A.2B.2 Procedure description

#### 4.5A.2B.2.1 Initial conditions

System Simulator:

- 1 cell, default parameters.
- The procedure shall be performed under ideal radio conditions as defined in clause 5

User Equipment:

- The UE is in Registered, RRC\_CONNECTED state (State 2).

The default system information messages are used.

## 4.5A.2B.2.2 Procedure sequence

## 4.5A.2C Procedure for UE-requested PDU session modification after the first S1 to N1 mode change / Single-registration mode with N26

### 4.5A.2C.1 Scope

The purpose of this procedure is to handle UE-requested PDU session modification after the first S1 to N1 mode change in the scenario of Single-registration mode, 'Interworking without N26 interface not supported'.

**Table 4.5A.2C.1-1: Conditions and other parameters**

| Condition                               | Explanation   |
|---|---|
| ExpectedNumberOfPDUSessionModifications | <b>Usage:</b> Parameter determining procedure sequence.<br>A value for this parameter shall be provided when the procedure is called.<br>Unless the test requires specific number of PDU modifications to take place the value should be set to pc_noOf_PDNsSameConnection + pc_noOf_PDNsNewConnection ([19]).<br><b>Meaning:</b> The number of PDU sessions which are expected to happen. Depends on the UE configuration and/or the context in which the procedure is used. |
| K                                       | <b>Usage:</b> Parameter determining procedure sequence.<br><b>Meaning:</b> The number of PDN SESSION MODIFICATION REQUEST messages already processed including the one that is currently being processed.   |
| L                                       | <b>Usage:</b> Parameter determining procedure sequence.<br><b>Meaning:</b> The number of PDN SESSION MODIFICATION REQUEST being received so far.  |
| N                                       | <b>Usage:</b> Parameter determining procedure sequence.<br>The parameter is initialised with the value of ExpectedNumberOfPDUSessionModifications<br><b>Meaning:</b> Loop (step sequence repetition) control.   |

## 4.5A.2C.2 Procedure description

## 4.5A.2C.2.1 Initial conditions

The UE is in RRC\_CONNECTED state.

## 4.5A.2C.2.2 Procedure sequence

**Table 4.5A.2C.2.2-1: Procedure for UE-requested PDU session modification after the first S1 to N1 mode change**

| St  | Procedure  | Message Sequence |   | Verdict |
|-----|--|------------------|---|---------|
|     |  | U - S            | Message   |         |
| 0   | Set K = 0, L = 0,<br>N = (ExpectedNumberOfPDUSessionModifications).  | -                | -   | -       |

|--|---|---------|-----------|
| Information Element  | Value/remark  | Comment | Condition |
| PDU session ID   | The PDU session ID associated with the default EPS bearer of the PDN connection which is being transferred into PDU session and for which the UE needs to indicate its capabilities via the modification procedure.<br>(NOTE 1) |         |           |
| 5GSM capability  | Present. Contents not checked.  |         |           |
| Integrity protection maximum data rate   | Present. Contents not checked.  |         |           |
| NOTE 1: The PDU session ID was provided in the ACTIVATE DEFAULT EPS BEARER CONTEXT ACCEPT when the UE attached in S1. If the UE provides here an unknown PDU session ID then the SS shall set an Inconclusive verdict. |   |         |           |

### 4.5A.3 Procedure for IP address allocation in the user plane

#### 4.5A.3.1 Scope

The purpose of this procedure is to allow the successful completion of IP address allocation if it is initiated by the UE therefore the result from the execution of the Procedure for IP address allocation in the user plane shall not lead to assignment of a verdict.

Depending on the UE configuration there may be unpredictable delay in the start of the procedure. A guarding time of 1.2 sec is suggested within which the procedure is expected to start. If the timer expires then the test procedure, from which the Procedure for IP address allocation in the user plane is called, shall advance to the next specified step.

#### 4.5A.3.2 Procedure description

##### 4.5A.3.2.1 Initial conditions

N/A

##### 4.5A.3.2.2 Procedure sequence

**Table 4.5A.3.2.2-1: Procedure for IP address allocation in the user plane**

| Step | Procedure   | Message Sequence |         |
|------|---|------------------|---------|
|      |   | U - S            | Message |
| -    | EXCEPTION: Step 1 below and Step 1 in Table 4.5A.3.2.2-2 describe behaviour that depends on the contents of the latest PDU SESSION ESTABLISHMENT REQUEST message sent by the UE prior to this procedure.  | -                | -       |
| -    | EXCEPTION: In parallel to the event described in step 1 below the step specified in Table 4.5A.3.2.2-2 may take place.  | -                | -       |
| 1    | If the "PDU session type" in the latest PDU SESSION ESTABLISHMENT REQUEST message prior to this procedure was 'IPv4' or 'IPv4v6' then, IPv4 address allocation by DHCPv4 may occur on the user plane bearer established for the QoS flow of the default QoS rule. | -                | -       |

**Table 4.5A.3.2.2-2: Procedure for IP address allocation in the user plane, parallel behaviour**

| Step | Procedure  | Message Sequence |         |
|------|--|------------------|---------|
|      |  | U - S            | Message |
| 1    | If the "PDU session type" in the latest PDU SESSION ESTABLISHMENT REQUEST message prior to this procedure was 'IPv6' or 'IPv4v6' then stateless address auto configuration occurs on the user plane bearer established for the QoS flow of the default QoS rule. | -                | -       |

#### 4.5A.3.2.3 Specific message contents

None

## 4.5A.4 Procedure for IMS signalling

### 4.5A.4.1 Scope

The purpose of this procedure is to allow the successful completion of IMS signalling.

The procedure is applicable for UEs with IMS support (TS 38.508-2 A.4.4-1/2).

### 4.5A.4.2 Procedure description

#### 4.5A.4.2.1 Initial conditions

N/A

#### 4.5A.4.2.2 Procedure sequence

**Table 4.5A.4.2.2-1: Procedure for IMS signalling**

| Step  | Procedure  | Message Sequence |         |
|---|--|------------------|---------|
|   |  | U - S            | Message |
| -   | EXCEPTION: Steps 1a1 to 1a2b1 describe a transaction that depends on the UE capability                                       | -                | -       |
| 1a1   | IF pc_IMS_5GS then the SS starts timer Timer_1 = 10 s (Note 1)   | -                | -       |
| -   | EXCEPTION: Steps 1a2a1 to 1a2b1 describe a transaction that depends on the UE implementation                                 | -                | -       |
| 1a2a<br>1-<br>1a2a<br>8   | Registration procedure according TS 34.229-5 [47] subclause A.2 (steps 1-8).<br>Note: SS cancels timer Timer_1 at step 1a2a1 | -                | -       |
| 1a2b<br>1   | Timer_1 expires  | -                | -       |
| Note 1: Depending on the UE configuration there may be unpredictable delay in the start of the procedure. A guarding time of [10] sec is suggested within which the procedure is expected to start. If the timer expires then the test procedure, from which the Procedure for IMS signalling U-plane is called, shall advance to the next specified step |  |                  |         |

### 4.5A.4.2.3 Specific message contents

| nonCriticalExtension                         | Not present   |  |   |
| }  |   |  |   |
| NOTE 1:                                      | Delta(NRfs) is derived based on calibration procedure defined in the clause 6.1.3.3. NRfs is NR frequency on which SIB1 is broadcasted.                                   |  |   |
| NOTE 2:                                      | ROUND is rounded off to the nearest integer. As an example, '1 to 1.49' set to '1' while '1.5 to 2' to '2' and '-2.0 to 1.5' set to '-2' while '-1.49 to -1' set to '-1'. |  |   |

| Condition | Explanation  |
|-----------|--|
| SUL       | For test cases using SUL frequency for the serving cell, Qrxlevmin is obtained from q-RxLevMinSUL. |
| QBASED    | This condition applies to Quality based signalling test cases.                                     |
| NR_1      | System information combination NR-1 according table 4.4.3.1.2-1 is applied.                        |
| SIG       | Used for signalling test cases.  |

## 4.6.2 System information blocks

- *SIB2*

*SIB2* contains cell re-selection information common for intra-frequency, inter-frequency and/ or inter-RAT cell re-selection (i.e. applicable for more than one type of cell re-selection but not necessarily all) as well as intra-frequency cell re-selection information other than neighbouring cell related.

Table 4.6.2-1: SIB2

|  |   |   |                                      |
|--|---|---|--------------------------------------|
| cellReselectionSubPriority   | Not present   | The same subpriority as the one used for serving cell in SIB 2.   |                                      |
| q-OffsetFreq   | $dB_{XY} \text{ with } XY = (\text{FLOOR}((\Delta(\text{NRfn}) - \Delta(\text{NRfs}))/2))^2$ (NOTE 3) | This value is type of Q-OffsetRange in TS 38.331 [6] which must be even value when its absolute value is larger than dB5. | FR2 AND NOT AbsoluteValue_Within_dB5 |
|  | $dB_{XY} \text{ with } XY = \Delta(\text{NRfn}) - \Delta(\text{NRfs})$                                |   | FR2 AND AbsoluteValue_Within_dB5     |
|  | dB0   |   |                                      |
| interFreqNeighCellList   | Not present   | Not required unless Qoffset configuration is tested.  |                                      |
| interFreqBlackCellList   | Not present   | Not required unless Blacklisted cell list configuration is tested.  |                                      |
| }  |   |   |                                      |
| }  |   |   |                                      |
| lateNonCriticalExtension   | Not present   |   |                                      |
| }  |   |   |                                      |
| <p>NOTE 1: <math>\Delta(\text{NRfn})</math> and <math>\Delta(\text{NRfs})</math> is derived based on calibration procedure defined in the clause 6.1.3.3. NRfn and NRfs are NR frequencies in dl-CarrierFreq[n] and serving cell frequency on which SIB4 is broadcasted.</p> <p>NOTE 2: ROUND is rounded off to the nearest integer. As an example, '1 to 1.49' set to '1' while '1.5 to 2' to '2' and '-2.0 to 1.5' set to '-2' while '-1.49 to -1' set to '-1'.</p> <p>NOTE 3: FLOOR is rounded off to the smaller integer. As an example, '1.0 to 1.99' set to 1, '-1.01 to -2.00' set to -2.</p> |   |   |                                      |

| Condition                | Explanation   |
|--------------------------|---|
| SUL                      | For test cases using SUL frequency for the serving cell, Qrxlevmin is obtained from $q\text{-RxLevMin-sul}$ . |
| QBASED                   | This condition applies to Quality based signalling test cases.  |
| AbsoluteValue_Within_dB5 | $-5\text{dB} \leq (\Delta(\text{NRfn}) - \Delta(\text{NRfs})) \leq 5\text{dB}$ .                              |

### SIB5

SIB5 contains information relevant only for inter-RAT cell re-selection i.e. information about E-UTRA frequencies and E-UTRAs neighbouring cells relevant for cell re-selection. The IE includes cell re-selection parameters common for a frequency.

**Table 4.6.2-4: SIB5**

| Derivation Path: TS 38.331 [6], clause 6.3.1  |   |  |                           |
|---|---|--|---------------------------|
| Information Element   | Value/remark  | Comment  | Condition                 |
| SIB5 ::= SEQUENCE {<br>carrierFreqListEUTRA SEQUENCE (SIZE (1..maxEUTRA-Carrier)) OF CarrierFreqEUTRA { | The same number of entries as the configured E-UTRA carriers. For Signalling test cases, see table 6.3.1.3-1. | $n$ denotes the index of the entry   |                           |

## SIB9

SIB9 contains information related to GPS time and Coordinated Universal Time (UTC). The UE may use the parameters provided in this system information block to obtain the UTC, the GPS and the local time.

NOTE 1: The UE may use the time information for numerous purposes, possibly involving upper layers e.g. to assist GPS initialisation, to synchronise the UE clock.

*SIB9* also contains accurate reference time information of 5G internal system clock, which is necessary for, e.g., time synchronization in TSC (Time Sensitive Communications) services.

**Table 4.6.2-11A: *SIB9***

| Condition | Explanation   |
|-----------|---|
| Short_DCI | Used in test scenarios requiring DCI formats 0-0 and 1-0 on USS |
| SUL_NUL   | On the NUL carrier when supplementary carrier is configured     |
| RESUME    | Used in RRResume Message  |
| SIDELINK  | Used for sidelink communication                                 |

## 4.7 Default 5GC NAS message and information elements contents

### 4.7.0 General

#### 4.7.0.1 Interpretation of IE presence and values

For Uplink NAS messages, the following terms and their meanings shall be used to determine how to test specific IEs:

- "Not present": test cases fail if IE is present.
- "Present but contents not checked": test cases fail if IE is not present. No requirements regarding contents of the IE.
- "If present: contents not checked": IE may or may not be present. No requirements regarding contents of the IE.
- "If present: <specific values>": IE may or may not be present. If present, its contents shall be as specified.
- "<specific values>": test cases fail if IE is not present. Its contents shall be as specified.
- "Present if <condition>: contents not checked": test cases fail if condition is fulfilled and IE is not present. Contents of IE are not checked, even if present.
- "Present if <condition>: <specific values>": test cases fail if condition is fulfilled and IE is not present. When IE shall be present, its contents shall be as specified.

#### 4.7.0.2 Security protected 5GS NAS messages

In subclause 4.7.1, all 5GS NAS messages are described in the plain 5GS NAS message format.

When a 5GS NAS message is security protected, the message shall be contained by SECURITY PROTECTED 5GS NAS MESSAGE unless contained by another NAS message.

The default contents of SECURITY PROTECTED 5GS NAS MESSAGE message is defined in table 4.7.1-28.

## 4.7.1 Contents of 5GMM messages

- *Authentication request*

**Table 4.7.1-1: AUTHENTICATION REQUEST**

| Derivation Path: 24.501 clause 8.2.1                        |  |   |           |
|---|--|---|-----------|
| Information Element   | Value/remark   | Comment   | Condition |
| Extended protocol discriminator                             | '0111 1110'B   | 5GS mobility management messages                  |           |
| Security header type  | '0000'B  | Plain 5GS NAS message, not security protected     |           |
| Spare half octet  | '0000'B  |   |           |
| Authentication request message identity                     | '0101 0110'B   |   |           |
| ngKSI   |  |   |           |
| NAS key set identifier                                      | An arbitrarily selected value between '000'B and '110'B, different from the valid NAS key set identifier of the UE if such a value exists. |   |           |
| TSC   | '0'B   | native security context (for KSI <sub>AMF</sub> ) |           |
| Spare half octet  | '0000'B  |   |           |
| ABBA  | '0000 0000 0000 0000'B   |   |           |
| Authentication parameter RAND (5G authentication challenge) | Not Present  |   | EAP-AKA   |
|   | An arbitrarily selected 128 bits value   |   | 5G-AKA    |
| Authentication parameter AUTN (5G authentication challenge) | Not Present  |   | EAP-AKA   |
|   | 128 bits value generated according to TS 24.501 [28] subclause 9.11.3.15   |   | 5G-AKA    |
| EAP message   | Not Present  |   | 5G-AKA    |
| EAP message   | EAP-request/AKA'-challenge   | See Table 4.7.3.2-01                              | EAP-AKA   |

| Condition | Explanation   |
|-----------|---|
| EAP_AKA   | EAP based primary authentication and key agreement procedure    |
| 5G-AKA    | 5G AKA based primary authentication and key agreement procedure |

NOTE: Within a test execution this message is sent without integrity protection before NAS security mode control procedure has been successfully completed; and sent integrity protected and ciphered within SECURITY PROTECTED 5GS NAS MESSAGE message after 5GS NAS security mode control procedure has been successfully completed. SS does not maintain information for 5GS NAS security mode control procedure after a TC is completed.

— *Authentication response*

**Table 4.7.1-2: AUTHENTICATION RESPONSE**

| Derivation Path: 24.501 clause 8.2.2     |   |   |           |
|--|---|---|-----------|
| Information Element                      | Value/remark  | Comment                                       | Condition |
| Extended protocol discriminator          | 5GMM  |   |           |
| Security header type                     | '0000'B   | Plain 5GS NAS message, not security protected |           |
| Spare half octet                         | '0000'B   |   |           |
| Authentication response message identity | '0101 0111'B  |   |           |
| Authentication response parameter        | 16 octets RES* value calculated according to TS 24.501 [28] subclause 9.11.3.17 |   | 5G-AKA    |
|  | Not Present   |   | EAP-AKA   |
| EAP message                              | EAP-response/AKA'-challenge   | See Table 4.7.3.2-02                          | EAP-AKA   |

| Condition | Explanation   |
|-----------|---|
| EAP-AKA   | EAP based primary authentication and key agreement procedure    |
| 5G-AKA    | 5G AKA based primary authentication and key agreement procedure |

NOTE: When sent in response to an AUTHENTICATION REQUEST message which is not integrity protected and not ciphered, the AUTHENTICATION RESPONSE message is sent integrity protected when a valid security context exists and without integrity protection and ciphering otherwise.

— *Authentication result*

**Table 4.7.1-3: AUTHENTICATION RESULT**

| Derivation Path: 24.501 clause 8.2.3   |   |   |           |
|--|---|---|-----------|
| Information Element                    | Value/remark  | Comment                                       | Condition |
| Extended protocol discriminator        | 5GMM  |   |           |
| Security header type                   | '0000'B   | Plain 5GS NAS message, not security protected |           |
| Spare half octet                       | '0000'B   |   |           |
| Authentication result message identity | '0101 1010'B  |   |           |
| ngKSI                                  | The same value as the last AUTHENTICATION REQUEST message |   |           |
| Spare half octet                       | '0000'B   |   |           |
| EAP message                            | EAP-Success   | See Table 4.7.3.2-03                          |           |
| ABBA                                   | '0000 0000 0000 0000'B                                    |   |           |

NOTE: The security protection of this message is the same as the previous AUTHENTICATION REQUEST message.

— *Authentication failure*

**Table 4.7.1-4: AUTHENTICATION FAILURE**

| Derivation Path: 24.501 clause 8.2.4    |                                  |   |           |
|---|----------------------------------|---|-----------|

| IP header compression configuration       | Not Present   |  |             |
| Ethernet header compression configuration | Not Present   |  |             |

| Condition             | Explanation   |
|-----------------------|---|
| IPv4                  | If in the last PDU SESSION ESTABLISHMENT REQUEST sent prior to this message, the PDU session type = '001'B  |
| IPv6                  | If in the last PDU SESSION ESTABLISHMENT REQUEST sent prior to this message, the PDU session type = '010'B  |
| IPv4v6                | If in the last PDU SESSION ESTABLISHMENT REQUEST sent prior to this message, the PDU session type = '011'B  |
| IPv4-DHCP             | If in the last PDU SESSION ESTABLISHMENT REQUEST sent prior to this message, the IE Extended protocol configuration options contains a configuration protocol option = '000BH' ("IPv4 address allocation via DHCPv4", length of contents = 0).<br><br>Note: This condition is used in conjunction with IPv4 or IPv4v6 as indicated in the "PDU address information" just above. |
| Always_On_Requested   | If the last PDU SESSION ESTABLISHMENT REQUEST message included the Always-on PDU session requested IE   |
| P-CSCF_IPv6           | If in the last PDU SESSION ESTABLISHMENT REQUEST sent prior to this message the IE Extended protocol configuration options contains a configuration protocol option = '0001H' ("P-CSCF IPv6 Address Request", length of contents = 0)   |
| P-CSCF_IPv4           | If in the last PDU SESSION ESTABLISHMENT REQUEST sent prior to this message the IE Extended protocol configuration options contains a configuration protocol option = '000CH' ("P-CSCF IPv4 Address Request", length of contents = 0)   |
| Interworking_with_EPS | If the UE has indicated support of S1, then the SS shall include this IE to provide details for the interworking with EPS being supported for a PDU session. This requirement is set up for the purpose of facilitating the test description. It is not mandatory for the Network to support Mapped EPS bearer contexts.  |
| SST_URLLC             | Slice suitable for the handling of ultra-reliable low latency communications.   |
| SST_MIoT              | Slice suitable for the handling of massive IoT  |
| SST_V2X               | Slice suitable for the handling of V2X services.  |

### 4.7.3 Contents of EAP-AKA' messages

For all the message definitions below, the acceptable order and syntax of attributes and fields within these attributes must be according to IETF RFCs where those attributes have been defined. Typically the order of attributes is not significant, but there could be well defined exceptions where the order is important.

The contents of the messages described in the present Annex is not complete - only the attributes required to be checked or generated by SS are listed here. The messages sent by the UE may contain additional attributes which are not checked and must thus be ignored by SS.

#### 4.7.3.1 EAP-AKA' message attributes

**Table 4.7.3.1-1: AT\_RAND\_Def**

| Derivation Path: IETF RFC 4187 [30] clause 10.6 |  |         |           |
|---|--|---------|-----------|
| Information Element                             | Value/remark                           | Comment | Condition |
| AT_RAND   | '0000 0001'B                           | 1       |           |
| Length  | '0000 0101'B                           | 5       |           |
| Reserved  | '0000 0000 0000 0000'B                 |         |           |
| RAND  | An arbitrarily selected 128 bits value |         |           |

**Table 4.7.3.1-2: AT\_AUTN\_Def**

| Derivation Path: IETF RFC 4187 [30] clause 10.7 |  |         |           |
|---|--|---------|-----------|
| Information Element                             | Value/remark   | Comment | Condition |
| AT_AUTN   | '0000 0010'B   | 2       |           |
| Length  | '0000 0101'B   | 5       |           |
| Reserved  | '0000 0000 0000 0000'B   |         |           |
| AUTN  | 128 bits value generated according to TS 24.501 [28] subclause 9.11.3.15 |         |           |

**Table 4.7.3.1-3: AT\_KDF\_Def**

| Derivation Path: IETF RFC 5448 [31] clause 3.3 |                       |             |           |
|--|-----------------------|-------------|-----------|
| Information Element                            | Value/remark          | Comment     | Condition |
| AT_KDF   | '0001 1000'B          | 24          |           |
| Length   | '0000 0001'B          | 1           |           |
| KDF  | '0000 0000 0000 0001' | 1: EAP_AKA' |           |

**Table 4.7.3.1-4: AT\_KDF\_INPUT\_Def**

| Derivation Path: IETF RFC 5448 [31] clause 3.2 |   |         |           |
|--|---|---------|-----------|
| Information Element                            | Value/remark  | Comment | Condition |
| AT_KDF_INPUT                                   | '0001 0111'B  | 23      |           |
| Length   | Set to the Length of attribute AT_KDF_INPUT in 4 bytes  |         |           |
| Actual Network Name Length                     | Set to the actual length of 'Network Name' in bytes excluding any appended all zero bytes at end  |         |           |
| Network Name                                   | Value generated according to TS 24.501 [28] clause 9.12.1 and shall be a multiple of 4 bytes (appended with 1,2 or 3 bytes of all zero bits when necessary) |         |           |

**Table 4.7.3.1-5: AT\_MAC\_Def**

| Derivation Path: IETF RFC 4187 [30] clause 10.15 |   |         |           |
|--|---|---------|-----------|
| Information Element                              | Value/remark  | Comment | Condition |
| AT_MAC   | '0000 1011'B  | 11      |           |
| Length   | '0000 0101'B  | 5       |           |
| Reserved   | '0000 0000 0000 0000'B  |         |           |
| MAC  | 128 bits value generated according to RFC 4187 [30] subclause 10.15 |         |           |

**Table 4.7.3.1-6: AT\_RES\_Def**

| Derivation Path: IETF RFC 4187 [30] clause 10.08 |  |         |           |
|--|--|---------|-----------|
| Information Element                              | Value/remark   | Comment | Condition |
| AT_RES   | '0000 0011'B   | 3       |           |
| Length   | Set to Length of AT_RES attribute in 4 bytes.  | 1 byte  |           |
| RES_LENGTH                                       | Set to the actual length of 'RES' in bytes excluding any appended all zero bytes at end  |         |           |
| RES  | RES* value calculated according to TS 24.501 [28] clause 9.11.3.17, possibly appended with 1,2 or 3 bytes of all zero bits to make lenght multiple of 4 bytes. |         |           |

**Table 4.7.3.1-7: AT\_AUTS\_Def**

| Derivation Path: IETF RFC 4187 [30] clause 10.08 |                                  |         |           |
|--|----------------------------------|---------|-----------|
| Information Element                              | Value/remark                     | Comment | Condition |
| AT_AUTS  | '0000 0100'B                     | 4       |           |
| Length   | '0000 0100'B                     | 4       |           |
| AUTS   | 14 octets RES* value not checked |         |           |

**Table 4.7.3.1-8: AT\_PERMANENT\_ID\_Def**

| Derivation Path: IETF RFC 4187 [30] clause 10.2 |                        |         |           |
|---|------------------------|---------|-----------|

## 4.7A Default TC message and information element contents

This clause contains the default values of common TC (Test Control, see [11]) messages and information elements, which apply to all test cases unless otherwise specified. All the messages and information elements are listed in alphabetical order.

### 4.7A.1 Test mode messages

- **ACTIVATE TEST MODE** with the following exception:
  - The supported test modes for 5GS are limited to those specified in subclause 38.509 [11] 5.3.4.

Same as TS 36.508 [2], Table 4.7A-1.

- **ACTIVATE TEST MODE COMPLETE**

Same as TS 36.508 [2], Table 4.7A-2.

- **DEACTIVATE TEST MODE**

Same as TS 36.508 [2], Table 4.7A-5.

- **DEACTIVATE TEST MODE COMPLETE**

Same as TS 36.508 [2], Table 4.7A-6.

### 4.7A.2 Test loop messages

- **CLOSE UE TEST LOOP**

Same as TS 36.508 [2], Table 4.7A-3 with the following exception:

- The supported test modes for 5GS are limited to those specified in subclause 38.509 [11] 5.3.4.

***CLOSE UE TEST LOOP COMPLETE***

Same as TS 36.508 [2], Table 4.7A-4.

***OPEN UE TEST LOOP***

Same as TS 36.508 [2], Table 4.7A-7.

***OPEN UE TEST LOOP COMPLETE***

Same as TS 36.508 [2], Table 4.7A-8.

### 4.7A.3 Beamlock messages

***ACTIVATE BEAMLOCK***

This message is only sent in the direction SS to UE, embedded in a RRC *DLInformationTransfer* message.

**Table 4.7A.3-1: ACTIVATE BEAMLOCK**

| Derivation Path: 38.509 clause 6.4.1 |               |         |           |           |
|--------------------------------------|---------------|---------|-----------|-----------|
| Information Element                  | Value/remark  | Comment | Condition |           |
| Protocol discriminator               | 1 1 1 1       |         |           |           |
| Skip indicator                       | 0 0 0 0       |         |           |           |
| Message type                         | 1 0 1 0 0 0 0 |         |           |           |
| UE Beamlock test Function            | 0 0 0 0 0 0 1 |         |           | Tx Only   |
| UE Beamlock test Function            | 0 0 0 0 0 1 0 |         |           | Rx Only   |
| UE Beamlock test Function            | 0 0 0 0 0 1 1 |         |           | Tx and Rx |

| Condition | Explanation  |
|-----------|--|
| Tx Only   | Activation UE beamlock function for Tx only        |
| Rx Only   | Activation UE beamlock function for Rx only        |
| Tx and Rx | Activation UE beamlock function for both Tx and Rx |

***ACTIVATE BEAMLOCK COMPLETE***

This message is only sent in the direction UE to SS, embedded in a RRC *ULInformationTransfer* message.

**Table 4.7A.3-2: ACTIVATE BEAMLOCK COMPLETE**

| Derivation Path: 38.509 clause 6.4.2 |               |         |           |  |

#### 4.7A.4 UE SS-RSRP per receiver branch reporting messages

- ***SS-RSRPB REPORT REQUEST***

FFS

- ***SS-RSRPB REPORT RESPONSE***

FFS

#### 4.7A.5 UE Positioning messages

- ***RESET UE POSITIONING STORED INFORMATION***

FFS

- ***UPDATE UE LOCATION INFORMATION***

FFS

## 4.7A.6 NSSAI delete messages

- **NSSAI DELETE REQUEST**

This message is only sent in the direction SS to UE, embedded in a RRC *DlInformationTransfer* message.

**Table 4.7A.6-1: NSSAI DELETE REQUEST**

| Derivation Path: 38.509 clause 6.7.1 |  |         |           |
|--------------------------------------|--|---------|-----------|
| Information Element                  | Value/remark                               | Comment | Condition |
| Protocol discriminator               | 1 1 1 1                                    |         |           |
| Skip indicator                       | 0 0 0 0                                    |         |           |
| Message type                         | 1 0 0 0 0 1 1 0                            |         |           |
| Delete NSSAI type                    | Set according to specific message contents |         |           |
| Configured NSSAI                     | Set according to specific message contents |         |           |
| Allowed NSSAI                        | Set according to specific message contents |         |           |

- **NSSAI DELETE RESPONSE**

This message is only sent in the direction UE to SS, embedded in a RRC *UlInformationTransfer* message.

**Table 4.7A.6-2: NSSAI DELETE RESPONSE**

| Derivation Path: 38.509 clause 6.7.2 |                 |         |           |
|--------------------------------------|-----------------|---------|-----------|
| Information Element                  | Value/remark    | Comment | Condition |

### 4.8.3 Common test UICC and USIM parameters

This clause defines default parameters for programming the elementary files of the test UICC when running conformance test cases defined in 3GPP TS 38.523-1[12].

#### 4.8.3.1 General

See clause 4.9.1 in 3GPP TS 36.508 [2] for the definition of test algorithm for

- authentication via EPC;
- authentication via 5GC using 5G AKA based primary authentication and key agreement procedure.
- authentication via 5GC using EAP-AKA' based primary authentication and key agreement procedure, further the Derivation of MSK, EMSK and other keys shall be as derived as clause 3.3 of IETF RFC 5448 [31], using Key derivation function HMAC-SHA-256 algorithm.

#### 4.8.3.2 Default parameters for the test USIM and ISIM

Same as clause 4.9.2 in 3GPP TS 36.508 [2] for

- authentication via EPC;
- authentication via 5GC using 5G AKA based primary authentication and key agreement procedure.
- authentication via 5GC using EAP-AKA' based primary authentication and key agreement procedure.

#### 4.8.3.3 Default settings for the Elementary Files (EFs)

Same as clause 4.9.3 in 3GPP TS 36.508 [2] for

- authentication via EPC;
- authentication via 5GC using 5G AKA based primary authentication and key agreement procedure
- authentication via 5GC using EAP-AKA' based primary authentication and key agreement procedure.

##### 4.8.3.3.1 Modified contents of the USIM Elementary Files

**Table 4.8.3.3.1-1: EF<sub>UST</sub> (USIM Service Table)**

| Services                                  |   | Activated | Version | Condition |
|---|---|-----------|---------|-----------|
| Service n°122                             | 5GS Mobility Management Information         | Optional  |         | 5GC       |
| Service n°123                             | 5GS Security Parameters                     | Optional  |         | 5GC       |
| Service n°124                             | Subscription identifier privacy support     | Optional  |         | 5GC       |
| Service n°125                             | SUCI calculation by the USIM                | Optional  |         | 5GC       |
| Service n°126                             | UAC Access Identities Configuration         | Optional  |         | 5GC       |
| Service n°127                             | Control plane-based steering of UE in VPLMN | Optional  |         | 5GC       |
| Service n°128                             | Call control on PDU Session by USIM         | Optional  |         |           |
| Service n°129                             | 5GS Operator PLMN List                      | Optional  |         |           |
| Note: Only 5GS related services indicated |   |           |         |           |

| Condition | Explanation            |
|-----------|------------------------|
| 5GC       | Authentication via 5GC |

##### 4.8.3.3.2 Contents of Elementary Files at the DF<sub>5GS</sub> level

This clause defines the default contents of Elementary Files (EF) that are specific for 5GS and which are grouped in Data File (DF) structure 5GS.

EF<sub>5GS3GPPLOCI</sub> (5GS 3GPP location information)

File size: 20 Bytes

Default values: Bytes 1 to 13 (HEX): FF (5G-GUTI)

Bytes 14 to 19 (HEX): 42 F6 18 FF FF FE (Last visited registered TAI in 5GS for 3GPP access)

Byte 20 (BIN): 00000001 (5GS update status for 3GPP access = "5U2 not updated")

Bytes 14 to 19: TAI-MCC = 246 (bytes 14 to 15) and TAI-MNC = 81 (byte 16) are frequently used. The TAC (bytes 17 to 19) is set to "FF FF FE" since this, in conjunction with byte 20 setting of "01", is used to ensure that the UE performs registration at the beginning of a test.

Bytes in this file (e.g. GUTI in bytes 1 to 13) may be updated as a result of a registration attempt by the UE.

#### **EF<sub>5GSN3GPPLOCI</sub> (5GS non-3GPP location information)**

File size: 20 Bytes

Default values: Bytes 1 to 13 (HEX): FF (5G-GUTI)

Bytes 14 to 19 (HEX): 42 F6 18 FF FF FE (Last visited registered TAI in 5GS for non-3GPP access)

Byte 20 (BIN): 00000001 (5GS update status for non-3GPP access = "5U2 not updated")

Bytes 14 to 19: TAI-MCC = 246 (bytes 14 to 15) and TAI-MNC = 81 (byte 16) are frequently used. The TAC (bytes 17 to 19) is set to "FF FF FE" since this, in conjunction with byte 20 setting of "01", is used to ensure that the UE performs registration at the beginning of a test.

Bytes in this file (e.g. GUTI in bytes 1 to 13) may be updated as a result of a registration attempt by the UE.

#### **EF<sub>5GS3GPPNSC</sub> (5GS 3GPP Access NAS Security Context)**

The programming of this EF follows default parameter written in 3GPP TS 31.102 [33], annex E.

#### **EF<sub>5GSN3GPPNSC</sub> (5GS non-3GPP Access NAS Security Context)**

The programming of this EF follows default parameter written in 3GPP TS 31.102 [33], annex E.

#### **EF<sub>5GAUTHKEYS</sub> (5G authentication keys)**

The programming of this EF follows default parameter written in 3GPP TS 31.102 [33], annex E.

#### **EF<sub>UAC\_AIC</sub> (UAC Access Identities Configuration)**

The programming of this EF is a test house option.

#### **EF<sub>SUCI\_Calc\_Info</sub> (Subscription Concealed Identifier Calculation Information EF)**

The programming of this EF is a test house option.

#### **EF<sub>OPL5G</sub> (5GS Operator PLMN List)**

The programming of this EF follows default parameter written in 3GPP TS 31.102 [33], annex E.

### **4.8.3.3.3 Default settings of UICC and USIM for V2X**

#### **EF<sub>UST</sub> (USIM Service Table):**

Same as clause 4.9.3.4 of TS 36.508 [2].

**EF<sub>VST</sub> (V2X Service Table)**

If service n°119 is "available" in the USIM Service Table, this file shall be present. This EF indicates the coding of the V2X management objects and which V2X services are available.

File size: 2 Bytes

Default values: Bytes 1 to 2 (HEX): 01 02

Coding of the V2X management objects is according to 3GPP TS 24.588 [113].

Service n°2 V2X policy configuration data over PC5 is supported.

**NOTE:** The default value for NR support of V2X services is different from that for LTE V2X in clause 4.9.3.4 of TS 36.508 [2].

**EF<sub>V2XP\_PC5</sub> (V2X data policy over PC5)**

If service n°2 is "available" in EF<sub>VST</sub>, this file shall be present. This EF contains V2X in 5GS UE policies over PC5. The format of the V2X in 5GS UE policies over PC5 are specified in 3GPP TS 24.588 [113].

The V2X in 5GS UE policies over PC5 contents:

| Description   | Value  | M/O | Length (bytes) |
|---|--------|-----|----------------|
| V2X data policy over PC5 Tag                                    | 'A0'   | M   | 1              |
| Length  | Note 1 | M   | Note 2         |
| Validity timer  | FFS    | M   | X1             |
| Indicator bits  | FFS    | M   | 1              |
| Served by E-UTRA or served by NR Tag                            | '80'   | M   | 1              |
| Length  | X2     | M   | Note 2         |
| Served by E-UTRA or served by NR information                    | FFS    | M   | X2             |
| Not served by E-UTRA and not served by NR Tag                   | '81'   | O   | 1              |
| Length  | X3     | O   | Note 2         |
| Not served by E-UTRA and not served by NR information           | FFS    | O   | X3             |
| V2X service identifier to Tx profiles mapping rules Tag         | '82'   | O   | 1              |
| Length  | X4     | O   | Note 2         |
| V2X service identifier to Tx profiles mapping rules information | FFS    |     | X4             |
| Privacy config Tag  | '83'   | O   | 1              |
| Length  | X5     | O   | Note 2         |
| Privacy config information                                      | FFS    |     | X5             |
| V2X communication over PC5 in E-UTRA Tag                        | '84'   | O   | 1              |
| Length  | X6     | O   | Note 2         |
| V2X communication over PC5 in E-UTRA information                | FFS    | O   | X6             |
| V2X communication over PC5 in NR Tag                            | '85    | O   | 1              |
| Length  | X7     | O   | Note 2         |
| V2X communication over PC5 in NR Information                    | FFS    | O   | X7             |
| Note 1: This is the total size of the constructed TLV object.   |        |     |                |
| Note 2: The length is coded according to ISO/IEC 8825-1 [35].   |        |     |                |

#### 4.8.4 DNN/APN configurations

The present subclause provides DNN/APN configurations required for flexible PDU/PDN handling. Table 4.8.4-1 provides configurations for the types on DNN/APN handled in the present version of the test specification. If in the future new PDU types need to be handled then new DNN/APN configuration(s) may be added.

**Table 4.8.4-1: DNN/APN configurations**

| <b>Configurations</b>   | <b>Config #1</b>   | <b>Config #2</b>   |
|---|--|--|
| DNN/APN type  | internet   | ims  |
| DNN/APN ID  | pc_APN_ID_Internet   | pc_APN_ID_IMS  |
| 5GC QoS rule  | Reference QoS rule #1 as specified in subclause 4.8.2.1.                                 | Reference QoS rule #2 as specified in subclause 4.8.2.1.                                 |
| EPC default bearer context  | Reference default EPS bearer context #1 as specified in TS 36.508 [10], Table 6.6.1-1.   | Reference default EPS bearer context #2 as specified in TS 36.508 [10], Table 6.6.1-1.   |
| EPC dedicated bearer context  | Reference dedicated EPS bearer context #1 as specified in TS 36.508 [10], Table 6.6.2-1. | Reference dedicated EPS bearer context #4 as specified in TS 36.508 [10], Table 6.6.2-1. |
| IP address allocation   | Yes  | Yes  |
| IMS registration  | No   | Yes<br>NOTE 1  |
| NOTE 1: For PDN establishment the Procedure for IMS signalling according to TS 36.508 [2], subclause 4.5A.3 applies; for PDU establishment the Procedure for IMS signalling according to TS 34.229-5 [47], Annex A.2 applies. |  |  |

## 4.9 Test procedures

### 4.9.1 Test procedure to check user plane connectivity on DRB#n

This procedure aims at checking whether the UE User Plane Access Stratum is capable of exchanging data on DRB#n (#n is the DRB Id specified in the test case when the present procedure is called). In case the UE supports IP, it is also checked that the UE IP stack is connected to the UE User Plane Access Stratum.

Table 4.9.1-1: Test procedure sequence

| St  | Procedure  | Message Sequence |                              | TP | Verdict |
|-----|--|------------------|------------------------------|----|---------|
|     |  | U - S            | Message/PDU/SDU              |    |         |
| -   | EXCEPTION: Steps 1a1 to 1c2 describe behaviour that depends on the UE implementation; the "lower case letter" identifies a step sequence that take place depending on the UE implementation. | -                | -                            | -  | -       |
| 1a1 | IF (pc_IP_Ping = TRUE AND pc_IPv4 = TRUE) THEN, the SS sends an ICMP Echo request to the IPv4 address assigned to the UE on DRB#n.   | <--              | ICMP ECHO REQUEST (NOTE 3)   | -  | -       |
| 1a2 | Check: Does the UE send an ICMP Echo reply on DRB#n?   | -->              | ICMP ECHO REPLY              | -  | P       |
| 1b1 | ELSE IF (pc_IP_Ping = TRUE AND (pc_IPv4 = FALSE AND pc_IPv6 = TRUE)) THEN, the SS sends an ICMPv6 Echo request to the IPv6 address assigned to the UE on DRB#n.                              | <--              | ICMPv6 ECHO REQUEST (NOTE 3) | -  | -       |
| 1b2 | Check: Does the UE send an ICMPv6 Echo reply on DRB#n?   | -->              | ICMPv6 ECHO REPLY            | -  | P       |
| 1c1 | ELSE, the SS transmits one IP Packet to verify data path on DRB#n.<br>See NOTE 1, 2.   | -                | -                            | -  | -       |
| 1c2 | Check: Does UE send the IP Packet on DRB#n in the uplink?  | -                | -                            | -  | P       |

NOTE 1: A Test Loop is assumed to already have been closed.

NOTE 2: When DRB#n is a dedicated bearer, the IP Packet shall match the packet filters as configured for DRB#n. When DRB#n is a default bearer, the IP Packet shall match none of the dedicated bearers associated to DRB#n (if any). (NOTE 4)

NOTE 3: When DRB#n is a dedicated bearer, the source address of the ICMP/ICMPv6 ECHO REQUEST shall be the same as the remote address of the DL/UL packet filters. When DRB#n is a default bearer, the source address of the ICMP/ICMPv6 ECHO REQUEST shall be different than the remote address of the DL/UL packet filters for an associated dedicated bearer (if any). (NOTE 4)

NOTE 4: For 5GC QoS rules and the associated packet filters are specified in clause 4.8.2. For EPC the TFTs and associated packet filters are specified in clause 6.6.2 of TS 36.508 [2] and the IP packet shall be as according to clause 7.14.2 of TS 36.523-3 [41].

**Table 4.9.1-1A: Test procedure sequence for Data path check for CA tests**

| St  | Procedure  | Message Sequence |  | TP | Verdict |
|---|--|------------------|--|----|---------|
|   |  | U - S            | Message/PDU/SDU                          |    |         |
| -   | EXCEPTION: Step 1 is only performed if SCell is not yet activated.   | -                | -  | -  | -       |
| 1   | The SS transmits an Activation MAC control element to activate Scell.  | <--              | MAC PDU (Activation (C <sub>1</sub> =1)) |    |         |
| -   | EXCEPTION: Steps 2a1 to 2c2 describe behaviour that depends on the UE implementation; the "lower case letter" identifies a step sequence that take place depending on the UE implementation. | -                | -  | -  | -       |
| 2a1   | IF (pc_IP_Ping = TRUE AND pc_IPv4 = TRUE) THEN, the SS sends an ICMP Echo request to the IPv4 address assigned to the UE on DRB#n on the SCell.  | <--              | ICMP ECHO REQUEST (NOTE 3)               | -  | -       |

#### 4.9.4 Test procedure to check that UE is in state 5GC RRC\_IDLE on a certain NR/NGC cell

##### 4.9.4.1 Scope

This procedure aims at checking whether the UE is in state 5GC RRC\_IDLE on a certain cell (as specified in the test case).

##### 4.9.4.2 Procedure description

##### 4.9.4.2.1 Initial conditions

As specified in the TC which calls the procedure in its entirety or refers to parts of it.

##### 4.9.4.2.2 Procedure

**Table 4.9.4.2.2-1: Test procedure sequence**

| St  | Procedure   | Message Sequence |                                | TP | Verdict |
|-----|---|------------------|--------------------------------|----|---------|
|     |   | U - S            | Message/PDU/SDU                |    |         |
| 1   | Step 1 of Generic procedure for bringing the UE in RRC_CONNECTED state with connectivity NR as specified in Table 4.5.4.2-3 is performed.   | -                | -                              | -  | -       |
| 2   | Check: Does the UE transmit an <i>RRCSetupRequest</i> message on the cell specified in the test case?   | -->              | NR RRC: <i>RRCSetupRequest</i> | -  | P       |
| 3-8 | Steps 3-8 of Generic procedure for bringing the UE in RRC_CONNECTED state with connectivity NR as specified in Table 4.5.4.2-3 are performed.   | -                | -                              | -  | -       |
| -   | EXCEPTION: Step 9a1 describes a step sequence depending on procedure parameters; the "lower case letter" identifies a step sequence that take place if a procedure parameter has a particular value | -                | -                              | -  | -       |
| 9a1 | IF 'connected without release' is not present THEN the SS transmits an <i>RRCRelease</i> message to release RRC connection and move the UE to RRC_IDLE.   | <->              | NR RRC: <i>RRCRelease</i>      | -  | -       |

##### 4.9.4.2.3 Specific Message content

As specified in the TC which calls the procedure in its entirety or refers to parts of it.

### 4.9.5 Test procedure to check that UE is camped on a new NR/NGC cell belonging to a new TA

#### 4.9.5.1 Scope

This procedure aims at checking whether the UE performs a mobility registration updating (Tracking Area (TA) update) procedure when it camps on a new cell (as specified in the test case) belonging to a new TA.

#### 4.9.5.2 Procedure description

##### 4.9.5.2.1 Initial conditions

As specified in the TC which calls the procedure in its entirety or refers to parts of it.

##### 4.9.5.2.2 Procedure sequence

**Table 4.9.5.2.2-1: Test procedure sequence mobility registration updating (TA update)**

| St  | Procedure   | Message Sequence |   | TP | Verdict |
|---|---|------------------|---|----|---------|
|   |   | U - S            | Message/PDU/SDU   |    |         |
| -   | EXCEPTION: Unless otherwise stated all the messages below are transmitted on the cell specified in the test case.   | -                | -   | -  | -       |
| 1   | The UE transmits an <i>RRCSetupRequest</i> message.   | -->              | NR RRC: <i>RRCSetupRequest</i>                                      | -  | -       |
| 2   | SS transmit an <i>RRCSetup</i> message.   | <--              | NR RRC: <i>RRCSetup</i>   | -  | -       |
| 3   | The UE transmits an <i>RRCSetupComplete</i> message to confirm the successful completion of the connection establishment and a REGISTRATION REQUEST message indicating "mobility registration updating" is sent to update the registration of the actual tracking area. | -->              | NR RRC: <i>RRCSetupComplete</i><br>5GMM: REGISTRATION REQUEST       | -  | -       |
| 4   | SS sends a REGISTRATION ACCEPT message containing a 5G-GUTI.<br>(NOTE 1, NOTE 2)  | <--              | NR RRC: <i>DLInformationTransfer</i><br>5GMM: REGISTRATION ACCEPT   | -  | -       |
| 5   | Check: Does the UE send a REGISTRATION COMPLETE?  | -->              | NR RRC: <i>ULInformationTransfer</i><br>5GMM: REGISTRATION COMPLETE | -  | P       |
| -   | EXCEPTION: Step 6a1 describes a step sequence depending on procedure parameters; the "lower case letter" identifies a step sequence that take place if a procedure parameter has a particular value   | -                | -   | -  | -       |
| 6a1   | IF 'connected without release' is not present<br>THEN the SS transmits an <i>RRCRelease</i> message to release RRC connection and move the UE to RRC_IDLE.  | <--              | NR RRC: <i>RRCRelease</i>   | -  | -       |
| NOTE 1: If a PDU session status IE was included in the REGISTRATION REQUEST message then the SS includes a PDU session status IE in the REGISTRATION ACCEPT message indicating that all the PDU sessions are active.<br>NOTE 2: If the UE has indicated S1 mode supported then the SS shall indicate in the 5GS network feature support IE in the REGISTRATION ACCEPT message the IWK N26 bit set to "interworking without N26 not supported". The setting of the "interworking without N26 not supported" has been chosen to ensure that the UE is operating in the single-registration mode allowing for a clearly pre-determined UE behaviour. |   |                  |   |    |         |

#### 4.9.5.2.3 Specific Message content

As specified in the TC which calls the procedure in its entirety or refers to parts of it.

## 4.9.6 Test procedures for Switch off / Power off UE

### 4.9.6.1 Switch off / Power off procedure in RRC\_IDLE

**Table 4.9.6.1-1: Switch off procedure in RRC\_IDLE**

| Step    | Procedure  | Message Sequence |  |
|---------|--|------------------|--|
|         |  | U - S            | Message  |
| -       | EXCEPTION: Steps 1a1 to 1b1 describe behaviour that depends on the UE capability; the "lower case letter" identifies a step sequence that take place if [36] pc_SwitchOnOff or [37] pc_USIM_Removal is supported | -                | -  |
| 1a1     | IF pc_SwitchOnOff THEN switch off UE, IF pc_USIM_Removal THEN remove the USIM (Note 1)   | -                | -  |
| 1a2     | UE transmits an <i>RRCSetupRequest</i> message.  | -->              | RRC: <i>RRCSetupRequest</i>                                  |
| 1a3     | SS transmit an <i>RRCSetup</i> message.  | <--              | RRC: <i>RRCSetup</i>   |
| -       | EXCEPTION: Steps 1a4Aa1 to 1a4Aa6 specify optional behaviour if the UE has previously performed IMS registration   | -                | -  |
| 1a4Aa 1 | The UE transmits an <i>RRCSetupComplete</i> message to confirm the successful completion of the connection establishment and to initiate the IMS signalling procedure by including the SERVICE REQUEST message.  | -->              | RRC: <i>RRCSetupComplete</i><br>5GMM: SERVICE REQUEST        |
| 1a4Aa 2 | The SS transmits a <i>SecurityModeCommand</i> message to activate AS security.   | <--              | RRC: <i>SecurityModeCommand</i>                              |
| 1a4Aa 3 | The UE transmits a <i>SecurityModeComplete</i> message and establishes the initial security configuration.   | -->              | RRC: <i>SecurityModeComplete</i>                             |
| 1a4Aa 4 | The SS transmits an <i>RRCCoreConfiguration</i> message and a SERVICE ACCEPT message to establish SRB2 and DRB.  | <--              | RRC: <i>RRCCoreConfiguration</i><br>5GMM: SERVICE ACCEPT     |
| -       | EXCEPTION: In parallel to the event described in step 1a4Aa5 below, the generic test procedure in TS 34.229-5 [47] Annex A.11 may be performed.  | -                | -  |
| 1a4Aa 5 | The UE transmits an <i>RRCCoreConfigurationComplete</i> message.   | -->              | RRC: <i>RRCCoreConfigurationComplete</i>                     |
| 1a4Aa 6 | The UE transmits a Deregistration REQUEST message  | -                | 5GMM: Deregistration REQUEST                                 |
| -       | EXCEPTION: Step 1a4Ab1 below specifies the behaviour if the UE has not previously performed IMS registration   | -                | -  |
| 1a4Ab 1 | The UE transmits an <i>RRCSetupComplete</i> message including the Deregistration REQUEST message.  | -->              | RRC: <i>RRCSetupComplete</i><br>5GMM: Deregistration REQUEST |
| 1a4     | Void   | -                | -  |
| 1a5     | The SS transmits an <i>RRCCoreRelease</i> message  | <--              | RRC: <i>RRCCoreRelease</i>                                   |
| 1b1     | ELSE power off UE (Note 2)   | -                | -  |

Note 1: USIM removal is a feasible alternative to switch off UE.

Note 2: Power off is used when UE don't support switch off or USIM removal, in which case no UE originated deregistration procedure is expected.

#### 4.9.6.2 Switch off / Power off procedure in RRC\_INACTIVE

##### 4.9.6.2.1 Procedure

**Table 4.9.6.2.1-1: Switch off procedure in RRC\_INACTIVE**

| Note 1: USIM removal is a feasible alternative to switch off UE.   |  |                  |                              |
| Note 2: Power off is used when UE don't support switch off or USIM removal, in which case no UE originated deregistration procedure is expected. |  |                  |                              |

#### 4.9.7 Test procedure for UE for Tracking area updating / Inter-system change from N1 mode to S1 mode in 5GMM/EMM-IDLE mode

##### 4.9.7.1 Scope

This procedure aims at verifying that the UE performs a Tracking Area Update (TAU) procedure when it performs inter-system change from N1 mode to S1 mode in 5GMM/EMM-IDLE.

The procedure provides different security context handling options based on the condition parameters defined in Table 4.9.7.1-1.

**Table 4.9.7.1-1: Condition parameters**

| <b>Condition</b>   | <b>Explanation</b>   |
|--|--|
| new security context   | When this parameter is present the SS will establish and take into account a new security context.   |
| existing EPS security context  | When this parameter is present the SS will take into account an existing EPS security context. A prerequisite for using this condition is the existence of an EPS security context |
| NOTE 1: If none of the defined condition parameters is present when the procedure is referred to then the SS will apply mapped 5G security context. A prerequisite for using this condition is the existence of 5G security context. |  |

4.9.7.2                  Procedure description

4.9.7.2.1                  Initial conditions

System Simulator:

- 1 E-UTRA cell connected to EPC, default parameters, system information combination 31 as defined in TS 36.508 [2], subclause 4.4.3.1.1.

NOTE: Details about the NGC cell from which the UE will move to the E-UTRA cell are to be specified in the test.

User Equipment:

- The Test UICC shall be inserted. It shall provide relevant details on the EPC and 5GC.

All details required shall be explicitly specified in the TC which calls the procedure in its entirety or refers to parts of it.

## 4.9.7.2.2 Procedure sequence

**Table 4.9.7.2.2-1: Test procedure sequence UE Tracking area updating / inter-system change from N1 mode to S1 mode in EMM-IDLE mode**

| St  | Procedure  | Message Sequence |   | TP | Verdict |
|-----|--|------------------|---|----|---------|
|     |  | U - S            | Message/PDU/SDU   |    |         |
| -   | EXCEPTION: Unless otherwise stated all the messages below are transmitted on the cell specified in the test case.  | -                | -   | -  | -       |
| 1   | The UE transmits an <i>RRConnectionRequest</i> message on the cell specified in the test case.   | -->              | RRC: <i>RRConnectionRequest</i>   | -  | -       |
| 2   | SS transmits an <i>RRConnectionSetup</i> message.  | <--              | RRC: <i>RRConnectionSetup</i>   | -  | -       |
| 3   | The UE transmits an <i>RRConnectionSetupComplete</i> message to confirm the successful completion of the connection establishment and a TRACKING AREA UPDATE REQUEST message is sent to update the registration of the actual tracking area.<br>For some consequences related to the content of the TRACKING AREA UPDATE REQUEST message see the Notes in Table 4.9.7.2.3-1. | -->              | RRC:<br><i>RRConnectionSetupComplete</i><br>NAS: TRACKING AREA UPDATE REQUEST | -  | -       |
| -   | EXCEPTION: Steps 4a1-4b2 describe a step sequence depending on procedure parameters; the "lower case letter" identifies a step sequence that take place if a procedure parameter has a particular value  | -                | -   | -  | -       |

## 4.9.9 Test procedure for UE for Tracking area updating / Inter-system change from S1 mode to N1 mode in 5GMM/EMM-IDLE mode

## 4.9.9.1 Scope

This procedure aims at verifying that the UE performs a Mobility and periodic registration update procedure when it performs inter-system change from S1 mode to N1 mode in 5GMM/EMM-IDLE.

## 4.9.9.2 Procedure description

## 4.9.9.2.1 Initial conditions

System Simulator:

- 1 NGC Cell connected to 5GC, default parameters, system information combination NR-6 as defined in subclause 4.4.3.1.2.

NOTE: Details about the E-UTRA cell from which the UE will move to the NGC cell are to be specified in the test.

User Equipment:

- The Test UICC shall be inserted. It shall provide relevant details on the EPC and 5GC.

All details required shall be explicitly specified in the TC which calls the procedure in its entirety or refers to parts of it.

## 4.9.9.2.2 Procedure sequence

**Table 4.9.9.2.2-1: Test procedure sequence UE Tracking area updating / inter-system change from S1 mode to N1 mode in 5GMM/EMM-IDLE mode**

| 14b2<br>b1   | ELSE IF <i>connected without release</i> is not present THEN, the SS transmits an <i>RRCRelease</i> message to release RRC connection and move the UE to RRC_IDLE.  | <-- | NR RRC: <i>RRCRelease</i> | - | - |
| <p>NOTE 1: The NWK will indicated whether Interworking without N26 interface is supported in the REGISTRATION ACCEPT message, IE '5GS network feature support', IWK N26 bit. Consequently which branch would the procedure sequence go through will depend on the content of the REGISTRATION ACCEPT message applicable to e.g. the test case which calls the present test procedure.</p> <p>NOTE 2: Depending on UE implementation and/or NWK behaviour, the UE may transfer some PDN connections into PDU sessions without re-establishing them with the relevant mapping provided in the ACTIVATE DEFAULT EPS BEARER CONTEXT REQUEST message. This will result in the number of connection modifications, if any, being lower than the pc_noOf_PDUsSameConnection or the pc_noOf_PDUsNewConnection which the UE will establish upon initial attach to the 5GS.</p> <p>NOTE 3: Since the MME does not provide the UE with the mapped PDU session for a PDN connection, the UE does not know whether interworking to 5GS is supported for a PDN connection for which the UE assigned a PDU Session identity before attempting to transfer the PDN connection from S1 mode to N1 mode. It is up to UE implementation to decide which PDN connection(s) to be attempted to transfer from S1 mode to N1 mode, e.g. based on UE policy or UE local configuration. (see TS 24.501 [22], subclause 6.1.4.2)</p> |   |     |                           |   |   |

Table 4.9.9.2.2-2: Parallel behaviour

| St   | Procedure   | Message Sequence |         | TP | Verdict |
|--|---|------------------|---------|----|---------|
|  |   | U - S            | Message |    |         |
| -  | EXCEPTION: Step 1 describe a step sequence depending on test case scenario; the "lower case letter" identifies a step sequence that take place if the UE performs a specific action.<br>NOTE 2, NOTE 3  | -                | -       | -  | -       |
| 1  | IF this is the first time in a test case that the UE moves from S1 to N1 THEN<br><br>the generic procedure for Procedure for UE-requested PDU session modification after the first S1 to N1 mode change / Single-registration mode with N26, specified in subclause 4.5A.2C, takes place with<br>ExpectedNumberOfPDUSessionModification<br>s=(pc_noOf_PDUsSameConnection+pc_no<br>Of_PDUsNewConnection), with the<br>exception that IF step 2b1, Table<br>4.5A.2C.2.2-2 takes place THEN the SS<br>shall not assign Fail but continue with the<br>next step in the test sequence not expecting<br>any additional session modifications to take<br>place (NOTE 1). |                  |         |    |         |
| <p>NOTE 1: Depending on UE implementation and/or NWK behaviour, the UE may transfer with modification some PDN connections into PDU sessions without re-establishing them with the relevant mapping provided in the ACTIVATE DEFAULT EPS BEARER CONTEXT REQUEST message. This will result in the number of session modifications, if any, being lower than the pc_noOf_PDUsSameConnection+pc_noOf_PDUsNewConnection.</p> <p>NOTE 2: Whether this is the first time in a test case that the UE moves from S1 to N1 depends on the test scenario (including what happens in the preamble of the test).</p> <p>NOTE 3: It is assumed that the PDU session modification for all transferred PDUs will happen on the same connection with the mobility and periodic registration update procedure.</p> <p>NOTE 4: For PDN connections which will be transferred, tests calling the present procedure shall ensure that:<br/>           - For each PDN connection established during the UE registration to the EPS, the ACTIVATE DEFAULT EPS BEARER CONTEXT REQUEST message which corresponds to the default EPS bearer of the PDN connectivity being activated, contains the Protocol configuration options IE or the Extended protocol configuration options IE with mapped 5GS PDU a session-AMBR and QoS rule(s).</p> |   |                  |         |    |         |

- NOTE 1: The UE includes the PDU session status IE indicating the status of the PDU session(s) mapped during the inter-system change from S1 mode to N1 mode from the PDN connection(s) for which the EPS indicated that interworking to 5GS is supported, if any. This means that the UE has created locally the default bearer context and the dedicated bearer context(s) based on the parameters of the mapped bearer contexts or the associations between QoS flow and mapped bearer in the PDN connection. Although the contents of the IE is not required to be verified for PASS/FAIL purposes, the provided information shall be taken into account for building any subsequent RRC Reconfiguration message, and can be used e.g. for SS configuration purposes as well.
- NOTE 2: The UE is assumed NOT to have locally deactivated EPS bearer context(s) for which interworking to 5GS is supported while the UE was in S1 mode without notifying the network.

## 4.9.10 Test procedure to check that the UE is in RRC\_CONNECTED state

### 4.9.10.1 Scope

This procedure aims at checking whether the UE is in the RRC\_CONNECTED state.

### 4.9.10.2 Procedure description

#### 4.9.10.2.1 Initial conditions

As specified in the TC which calls the procedure in its entirety or refers to parts of it.

#### 4.9.10.2.2 Procedure

**Table 4.9.10.2.2-1: Test procedure sequence**

| St | Procedure   | Message Sequence |  | TP | Verdict |
|----|---|------------------|--|----|---------|
|    |   | U - S            | Message/PDU/SDU                        |    |         |
| 1  | The SS sends <i>UECapabilityEnquiry</i> message to the UE.        | <--              | NR RRC: <i>UECapabilityEnquiry</i>     | -  | -       |
| 2  | Check: Does the UE send a <i>UECapabilityInformation</i> message? | -->              | NR RRC: <i>UECapabilityInformation</i> |    | P       |

#### 4.9.10.2.3 Specific Message content

None.

## 4.9.11 Test Procedure for IMS Emergency call establishment in 5GC with IMS emergency registration

### 4.9.11.1 Scope

This procedure aims at verifying the UE establishment of IMS Emergency call in 5GC when the UE is in 5GMM-IDLE and when IMS emergency registration is required e.g. under Normal Service conditions.

### 4.9.11.2 Procedure description

#### 4.9.11.2.1 Initial conditions

System Simulator:

- 1 NR Cell connected to 5GC, default parameters.

## User Equipment:

- The Test UICC shall be inserted. It shall provide Emergency Numbers.

The procedure assumes that the UE is in test state 1N-A, subclause 4.4A.2 on the NR Cell. All necessary details required shall be explicitly specified in the TC which calls the procedure in its entirety or refers to parts of it.

## 4.9.11.2.2 Procedure sequence

## 4.9.12 Generic Test Procedure for IMS Emergency call establishment in 5GC without IMS emergency registration

### 4.9.12.1 Scope

This procedure aims at verifying the UE establishment of IMS Emergency call in 5GC without the need for IMS emergency registration to take place beforehand e.g. under Limited Service or SIM/USIM not available, the SIM/USIM is considered invalid by the UE conditions.

### 4.9.12.2 Procedure description

#### 4.9.12.2.1 Initial conditions

System Simulator:

- 1 NR Cell connected to 5GC, default parameters unless specified otherwise. PLMN/TAI which the cell belongs to, shall be explicitly specified in the TC which calls the procedure in its entirety or refers to parts of it

User Equipment:

- Whether the Test UICC shall be inserted or not, and, its settings e.g. in regard to the provision of Emergency Numbers, shall be explicitly specified in the TC which calls the procedure in its entirety or refers to parts of it.

## 4.9.12.2.2 Procedure sequence

#### 4.9.12.2.3 Specific Message content

All specific message contents shall be according subclause 4.6 and 4.7 with the exceptions below.

NOTE: Some of the specific message contents provided below assume that the UE is in the state 5GMM-DEREGISTERED.LIMITED-SERVICE or 5GMM-REGISTERED.LIMITED-SERVICE (e.g. the selected cell over 3GPP access is in a forbidden PLMN or is in a forbidden tracking area respectively), or, in 5GMM-DEREGISTERED.NO-SUPI as defined in TS 24.501 [28], subclauses 5.1.3.2.1.3.3 and 5.1.3.2.1.3.6 respectively. All necessary details required shall be explicitly specified in the TC which calls the procedure in its entirety or refers to parts of it.

## 4.9.12A Test Procedure for IMS MO Emergency call release

### 4.9.12A.1 Scope

This procedure aims at verifying the UE initiated release of an ongoing IMS Emergency call in 5GC

### 4.9.12A.2 Procedure description

#### 4.9.12A.2.1 Initial conditions

System Simulator:

- 1 NR Cell connected to 5GC, default parameters.

User Equipment:

- The Test UICC shall be inserted. It shall provide Emergency Numbers.

The procedure assumes that the UE is in test state 3N-A, subclause 4.4A.2 on the NR Cell with an active IMS emergency call. All necessary details required shall be explicitly specified in the TC which calls the procedure in its entirety or refers to parts of it.

#### 4.9.12A.2.2 Procedure sequence

**Table 4.9.12A.2.2-1: Test procedure sequence IMS MO Emergency call release**

## 4.9.13 Test procedure for no response to paging

### 4.9.13.1 Scope

This procedure aims at checking that the UE ignores paging messages with a specified identity.

### 4.9.13.2 Procedure description

#### 4.9.13.2.1 Initial conditions

As specified in the TC which calls the procedure in its entirety or refers to parts of it.

## 4.9.13.2.2 Procedure sequence

**Table 4.9.13.2.2-1: Test procedure sequence**

## 4.9.17 Generic Test Procedure for IMS MO call release in 5GC

4.9.17.1 Scope

The purpose of this procedure is to make a UE initiated release of an ongoing IMS speech call.

4.9.17.2 Procedure description

4.9.17.2.1 Initial conditions

System Simulator:

- 1 NR Cell connected to 5GC, default parameters.

User Equipment:

- The UE is in state 3N-A on the NR Cell with an active IMS call.

## 4.9.17.2.2 Procedure sequence

**Table 4.9.17.2.2-1: IMS MO speech call release in 5GC**

| St  | Procedure   | Message Sequence |   | TP | Verdict |
|-----|---|------------------|---|----|---------|

## 4.9.21 Procedure for PDU Session Release

### 4.9.21.1 Scope

The purpose of this procedure is to release both the PDU session and the user plane resources.

### 4.9.21.2 Procedure description

#### 4.9.21.2.1 Initial conditions

The UE is in state 3N-A with PDU SESSION ACTIVE as per Table 4.4A.2-3. If this is a UE triggered PDU Session Release, this will be specified in the test case together with the sending of a PDU SESSION RELEASE REQUEST by the UE.

#### 4.9.21.2.2 Procedure sequence

**Table 4.9.21.2.2-1: Procedure for PDU Session Release**

| St | Procedure   | Message Sequence |  |
|----|---|------------------|--|
|    |   | U – S            | Message  |
| 1  | The SS transmits an <i>RRCReconfiguration</i> message and a PDU SESSION RELEASE COMMAND | <--              | NR RRC: <i>RRCReconfiguration</i><br>5GMM: DL NAS TRANSPORT<br>5GSM: PDU SESSION RELEASE COMMAND     |
| 1A | The UE transmits a <i>RRCReconfigurationComplete</i>                                    | -                | NR RRC: <i>RRCReconfigurationComplete</i>  |
| 2  | The UE transmits a PDU SESSION RELEASE COMPLETE message                                 | -->              | NR RRC: <i>ULInformationTransfer</i><br>5GMM: UL NAS TRANSPORT<br>5GSM: PDU SESSION RELEASE COMPLETE |

### 4.9.21.3 Specific message contents

The NAS message contents will be as specified in the test case.

## 5 Test environments for RF test

### 5.0 General

#### 5.0.1 Single PDU configuration for RF testing

For RF and performance test case execution on 5G SA UE's defined in TS 38.521-1 [14], TS 38.521-2 [15], TS 38.521-4 [17], IMS shall not be considered and UE's shall be able use RRC (IDLE, CONNECTED) preambles defined in TS 38.508-1 clause 4.5. Before entering RRC\_CONNECTED or RRC\_IDLE state during initial conditions or test procedure, it is recommended that UE is pre-configured with only 1 PDU (non-IMS) along with appropriate settings to ensure UE operates and stays on NR cell.

For EN-DC settings the corresponding requirement holds that IMS shall not be considered and it is recommended that UE is pre-configured with only 1PDU/1 PDN.

### 5.1 Requirements of test equipment

#### 5.1.1 Requirements for transmission and reception tests

##### 5.1.1.1 Requirements common for conducted and OTA tests

No common RF test environment requirements are specified in addition to the common requirements described in clause 4.2.

##### 5.1.1.2 Requirements for conducted tests

No common RF test environment requirements are specified in addition to the common requirements described in clause 4.2.

### 5.1.1.3 Requirements for OTA tests

Editor's Note:

- The UE pre-configuration mentioned below to disable UL Tx diversity schemes shall be voided once a test methodology solution to minimize spectral flatness artefacts between TE and UE over all test points is defined.
- The permitted test methods for transmission and reception test are DFF, DFF with simplification for centre of beam measurements, IFF and NFTF and are described in TR 38.810[24]. The minimum requirements for each test setup are described in the following clauses.
- For conformance testing using the OTA test environment, the UE under test shall be pre-configured with UL Tx diversity schemes disabled to account for single polarization System Simulator (SS) in the test environment. The UE under test may transmit with dual polarization.

#### 5.1.1.3.1 DFF and DFF with simplification for centre of beam measurements

- Far-field measurement system in an anechoic chamber.
  - The minimum far-field distance R for a traditional far field anechoic chamber can be calculated based on the following equation:  $R > \frac{2D^2}{\lambda}$ , where D is the diameter of the smallest sphere that encloses the radiating parts of the DUT.
- A positioning system such that the angle between the dual-polarized measurement antenna and the DUT has at least two axes of freedom and maintains a polarization reference.
- For DFF(without simplification), a positioning system such that the angle between the link antenna and the DUT has at least two axes of freedom and maintains a polarization reference; this positioning system for the link antenna is in addition to the positioning system for the measurement antenna and provides for an angular relationship independently controllable from the measurement antenna.
- For setups intended for measurements of UE RF characteristics in non-standalone (NSA) mode with 1 UL configuration, an LTE link antenna is used to provide the LTE link to the DUT. The LTE link antenna provides a stable LTE signal without precise path loss or polarization control.
- For setups intended for measurements in NR CA mode with FR1 and FR2 inter-band NR CA, test setup provides NR FR1 link to the DUT. The NR FR1 link has a stable and noise-free signal without precise path loss or polarization control.
- Maximum permitted test system uncertainty is specified in Annex F in 38.521-2[15].

#### 5.1.1.3.2 IFF

- Indirect Far field of Compact Antenna Test Range(CATR) with quiet zone diameter at least D.
- The CATR system does not require a measurement distance of  $R > \frac{2D^2}{\lambda}$  to achieve a plane wave as in a standard far field range.
- A positioning system such that the angle between the dual-polarized measurement antenna and the DUT has at least two axes of freedom and maintains a polarization reference.
- For setups intended for measurements of UE RF characteristics in non-standalone (NSA) mode with 1UL configuration, an LTE link antenna is used to provide the LTE link to the DUT. The LTE link antenna provides a stable LTE signal without precise path loss or polarization control.
- For setups intended for measurements in NR CA mode with FR1 and FR2 inter-band NR CA, test setup provides NR FR1 link to the DUT. The NR FR1 link has a stable and noise-free signal without precise path loss or polarization control.
- Maximum permitted test system uncertainty is specified in Annex F in 38.521-2[15].

### 5.1.1.3.3 NFTF

- Radiated Near Field UE beam pattern are measured and based on the NFTF mathematical transform, the final metric such as EIRP is the same as the metric for the DFF setup
- A positioning system such as the angle between the dual-polarized measurement/link antenna and the DUT has at least two axes of freedom and maintains a polarization reference
- For setups intended for measurements of UE RF characteristics in non-standalone (NSA) mode with 1UL configuration, an LTE link antenna is used to provide the LTE link to the DUT. The LTE link antenna provides a stable LTE signal without precise path loss or polarization control.
- For setups intended for measurements in NR CA mode with FR1 and FR2 inter-band NR CA, test setup provides NR FR1 link to the DUT. The NR FR1 link has a stable and noise-free signal without precise path loss or polarization control.
- Maximum permitted test system uncertainty is specified in Annex F in 38.521-2[15].

## 5.1.2 Requirements for performance tests

### 5.1.2.1 Void

### 5.1.2.2 Void

### 5.1.2.3 Requirements for OTA test method

Editor's Note: This subclause is intended to describe the test equipment requirements which are specific to OTA test environment for performance tests.

- The UE pre-configuration mentioned below to disable UL Tx diversity schemes shall be voided once a test methodology solution to minimize spectral flatness artefacts between TE and UE over all test points is defined.
- For conformance testing using the OTA test environment, the UE under test shall be pre-configured with UL Tx diversity schemes disabled to account for single polarization System Simulator (SS) in the test environment. The UE under test may transmit with dual polarization.

## 5.2 Reference test conditions

### 5.2.1 Signal levels

#### 5.2.1.1 Signal Levels for conducted testing

For NR FR1 cell, the downlink power settings are specified in TS 38.521-1[14] and TS 38.521-3[16].

The uncertainty value is specified in TS 38.521-1 [14] Annex F or in TS 38.521-2 [15] Annex F.

#### 5.2.1.2 Signal Levels for OTA testing

##### 5.2.1.2.1 Downlink Signal Levels

For E-UTRA cell in EN-DC with FR2 NR, the downlink power settings are specified in clause 4.7 of TS 38.521-3[16].

For FR2 NR cell, the downlink power settings are specified in Annex C.0 of TS 38.521-2[15] and Annex C.0 of TS 38.521-3[16].

## 5.3 Void

Editor's Note: Reserved for future use.

## 5.4 Default NG-RAN RRC message and information elements contents

### 5.4.1 Radio resource control information elements

As defined in clause 4.6.3 with the following exceptions:

For Tx test cases in which Power Class 3 UEs verifying Power Class 3 requirements, refer to Table 5.4.1-1; For Tx test cases in which Power Class 2 UEs verifying Power Class 2 requirements, refer to Table 5.4.1-2; And for Tx test cases in which Power Class 2 UEs verifying Power Class 3 requirements, refer to Table 5.4.1-3.

## 5.5 Common procedures for RF testing

### 5.5.1 Procedure to configure SCC for NR RF CA testing

#### 5.5.1.1 Scope

The purpose of this procedure is to establish one or more SCC for NR CA testing.

#### 5.5.1.2 Procedure description

##### 5.5.1.2.1 Initial conditions

UE is operating in NR RRC\_CONNECTED state on NR Cell 1 without any SCell configured.

System Simulator:

- SS configures the number of SCells used by the test case using NR parameters for NR Cell 2 for SCC1, NR Cell 3 for SCC2, NR Cell 4 for SCC3 etc. as specified in Table 4.4.2-2.
- System information combination NR-2 as defined in clause 4.4.3.1.2 is used in all NR cells.

#### 5.5.1.2.2 Procedure sequence

**Table 5.5.1.2.2-1: Procedure to configure SCC**

| St | Procedure  | Message Sequence |                                      | TP | Verdict |
|----|--|------------------|--------------------------------------|----|---------|
|    |  | U - S            | Message                              |    |         |

| }   |  |  |           |
| }   |  |  |           |

## 6 Test environments for Signalling test

### 6.1 Requirements of test equipment

#### 6.1.1 Requirements common for conducted and OTA tests

The requirements of test equipment specified in this subclause apply to Signalling test cases defined in TS 38.523-1 [12], in addition to the common requirements of test equipment specified in clause 4.2 of this specification.

Test equipment shall be able to simulate cells of Radio Access Technologies NR and E-UTRA. The number of cells to be simulated simultaneously by the test equipment shall not exceed the resources specified in Table 6.1-1

**Table 6.1-1: Maximum resources in terms of number / configuration of cells to be simulated simultaneously in a test setup**

| Simulation of   | Max. number of cells (NR) |     | Max. number of cells (E-UTRA) |
|---|---------------------------|-----|-------------------------------|
|   | Conducted                 | OTA |                               |
| NR single-mode networks (FDD or TDD)  | 4 cells                   | FFS | n/a                           |
| NR dual-mode networks (FDD and TDD)   | 4 cells                   | FFS | n/a                           |
| NR networks involving Carrier Aggregation   | 4 cells                   | FFS | n/a                           |
| NR dual connectivity (NR-DC)  | 4 cells                   | FFS | n/a                           |
| NR dual connectivity (EN-DC)  | 4 cells                   | FFS | 2 cells                       |
| NR dual connectivity (EN-DC) involving Carrier Aggregation  | 4 cells                   | FFS | 2 cells                       |
| Mixed E-UTRA / NR networks  | 4 cells                   | FFS | 2 cells                       |
| Note 1: No differentiation between cell configuration types (as defined in clause 6.3.1) here, because these types are only relevant to specific test cases and their TTCN-3 implementation.<br>Note 2: Only network scenarios specified in clauses 4.4.1 and 6.3.2.1 have been covered.<br>Note 3: In case of Carrier Aggregation, each cell can act as a SpCell, an SCell, or a standalone cell (not used as a CA component carrier).<br>Note 4: In order to support test case requirements for conducted and OTA test methods, the number of active cells at any given time should be minimised in order to ensure maximum re use of SS Tx/Rx resources. |                           |     |                               |

Exceptions to the requirements outlined above are possible but need special evidence to be provided explicitly in the test case prose and should be allowed only if the test case purpose cannot be met otherwise.

Due to limited power level range for FR2 OTA test methods, when defining test cases requirements, care shall be taken to ensure that the number of active cells is minimised as this has an impact to have distinguishable power level difference. Cells that are used in initial parts of test cases and are no longer required for the rest of the procedure shall be clearly defined as Non-suitable "Off" cell to facilitate re use of SS Tx/Rx resources

## 6.1.2 Requirements for conducted test method

No requirements are specified in addition to the common requirements described in clause 4.2 and clause 6.1.1.

## 6.1.3 Requirements for OTA test method

### 6.1.3.1 General

**Editor's Note:** The UE pre-configuration mentioned below to disable UL Tx diversity schemes shall be voided once a test methodology solution to minimize spectral flatness artefacts between TE and UE over all test points is defined.

The DFF or IFF based OTA test methodologies, defined in Annex B.1 should be used for Signalling test.

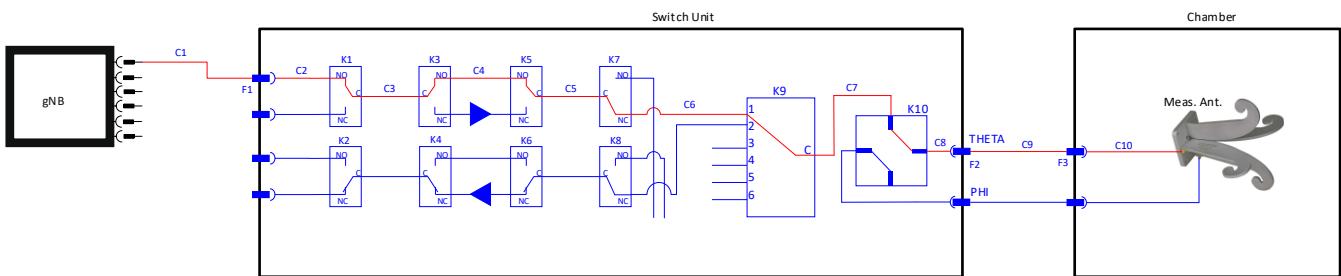

**NOTE:** For single cell test cases, usage of NF test methodology is not precluded.

Clause 6.1.3.2 describes a sample OTA measurement test setup and clause 6.1.3.3 describes approaches to select a UE orientation.

For conformance testing using the OTA test environment, the UE under test shall be pre-configured with UL Tx diversity schemes disabled to account for single polarization System Simulator (SS) in the test environment. The UE under test may transmit with dual polarization. This approach also applies to calibration stage..

### 6.1.3.2 Sample OTA Measurement Test Setup

Please refer to Figure 6.1.3.2-1 for a sample OTA measurement test setup.

**Figure 6.1.3.2-1: Sample OTA measurement setup**

NOTE: Figure 6.1.3.2-1 is for illustrative purposes only.

For 5G NR signalling test cases, depending on the dynamic range of measurements the system complexity can be reduced. In the switch unit, as shown in Figure 6.1.3.2-1, the switches K7, K8, K9, K10 can be removed. The amplifier (PA/LNA) is optional. For the "single cell" and "multiple cell" test cases, the gNB emulator can be directly connected to the feed horn.

### 6.1.3.3 Procedure for selecting UE Orientation and for calibration

Set calibrated power level at the centre of the quiet zone for each polarization individually [FFS].

Before starting the test, the UE orientation with which the test system can provide a wide enough dynamic range to perform the test scenarios needs to be identified in order to obtain sufficient link budget.

The UE orientation can be determined by either of the approaches below:

- Approach 1: UE vendor declares the direction in which the measurement has to be made. In this case, the declaration confirms that the Rx Beam peak conditions in FR2 specified in TS 38.133 [13] Annex B are met
- Approach 2: Perform an Rx-beam peak search

For Approach 2 an Rx beam peak search needs to be performed as per the procedure in TS 38.521-2 [15] Annex K, which finds the direction in which Rx Beam peak conditions in FR2 specified in TS 38.133 [13] Annex B are met.

RSRP measurements can be configured by SS in X2NR meas configurations using FFS preamble in NSA (Ex - RRC\_Connected with connectivity parameter E-UTRA with MCG Only bearer established and meas config enabled for event B1 (Ex-per TC 8.2.3.1.1 of TS 38.523-1)) and FFS preamble in SA modes.

When signal level calibrated with a reference antenna (only applicable to single-cell test cases without thresholds):

- The RSRP reported from the DUT is within [ $\pm$ FFSdB] of expected RSRP mentioned in Table 6.2.2.2-1.

When signal level calibrated with the RSRP-based calibration:

- Before starting the tests, Rx-beam peak directions need to be determined using Approach 1 or Approach 2 above. Rx beam peak direction may depend on the operating band under test. If Rx-beam peak directions for all the operating bands required for test scenarios are identical, three different levels in Table 6.2.2.2-2 can be used in the test scenarios.
- Rx-beam peak directions are decided to be 'identical', if the detected beam peak positions are direct neighbours on the measurement grid.

If Rx-beam peak directions are identical:

1. Position the UE so that the Rx beam peak direction is aligned towards the measurement antenna.
2. Make the UE report SS-RSRP at each frequency used in the test scenarios, while setting the downlink SS power at the centre of the quiet zone to -82dBm/SCS. Here, the SS-RSRP reported levels are denoted as  $P_{RSRP}(f)$ .
3. Calculate 'Delta(NRF)' for each carrier frequency used in the test case, using the equation:  $\Delta(NRF) = P_{RSRP}(f) + 82$ .

### 6.1.3.4 Handling of Thresholds

Where a threshold value is specified in the test case (value identified as  $TH_{test\ case}$ ) it is signalled to the UE with a value  $TH_{sig}$  according to table 6.1.3.4-1.

**Table 6.1.3.4-1: Handling of signalled threshold values**

| Type of Threshold                   | Signalled value  | Comment  |
|-------------------------------------|--|--|
| Absolute                            | $TH_{sig}(f) = TH_{test\ case} + \Delta(NRF_f)$  | $\Delta(NRF_f)$ value according to the frequency of the cell being compared to the threshold                                       |
| Relative, intra-frequency           | $TH_{sig}(f) = TH_{test\ case}$  |  |
| Relative, inter-frequency           | $a3\text{-}Offset_{sig} = a3\text{-}Offset_{test\ case} + \Delta(NRF_n) - \Delta(NRF_p)$ | $\Delta(NRF_p)$ is the Delta value for the SpCell frequency<br>$\Delta(NRF_n)$ is the Delta value for the neighbour cell frequency |
| Relative, inter-frequency, Event A6 | $a6\text{-}Offset_{sig} = a6\text{-}Offset_{test\ case} + \Delta(NRF_n) - \Delta(NRF_s)$ | $\Delta(NRF_s)$ is the Delta value for the SCell frequency<br>$\Delta(NRF_n)$ is the Delta value for the neighbour cell frequency  |

### 6.1.4 Requirements for timer tolerances

The timer tolerances specified for the test environment in this subclause apply to all Signalling test cases defined in TS 38.523-1 [12] unless otherwise specified.

All the timers used during testing are within a tolerance margin given by the equation below. If for a specific test a different tolerance value is required, then this should be specified in the relevant test document (i.e. the document where the test is described).

Timer tolerance = 10%.

## 6.2 Reference test conditions

### 6.2.1 Physical Channel Allocations

#### 6.2.1.1 Antennas

If the UE has two or more Rx antennas, the same downlink signal is applied to each one, except if MIMO is tested. All UE Rx antennas shall be connected.

If the UE has one Rx antenna, the downlink signal is applied to it.

#### 6.2.1.2 Downlink physical channels and physical signals

In general for signalling test cases the power allocation for downlink physical channels and signals is specified in relation to a reference cell power.

Unless specifically specified otherwise in a signalling test case prose, all cells use only one beam.

In case of only one beam per cell this reference cell power is the EPRE of the secondary synchronization signal (SSS) and referred to as “SS/PBCH SSS EPRE”.

In case of more than one beam per cell the power levels of the different SS/PBCH blocks may be different what makes it difficult to specify the EPRES of other physical channels and signals relative to the EPRE of any SSS. Therefore for multiple beams test cases the power levels are specified relative to the reference cell power.

For single beam per cell test cases the power allocation of downlink physical channels for signalling test cases is specified in table 6.2.1.2-1, for multiple beams per cell test cases the power allocation is specified in table 6.2.1.2-2.

**Table 6.2.1.2-1: Power allocation for OFDM symbols and reference signals for signalling test cases (single beam)**

| Parameter                         | Unit    | Value                  | Comment   |
|-----------------------------------|---------|------------------------|---|
| SSS transmit power                | dBm/SCS | Test specific (Note 1) | referred to as "SS/PBCH SSS EPRE"                                     |
| EPRE ratio of PSS to SSS          | dB      | 0                      |   |
| EPRE ratio of PBCH DMRS to SSS    | dB      | 0                      |   |
| EPRE ratio of PBCH to PBCH DMRS   | dB      | 0                      |   |
| EPRE ratio of PDCCH DMRS to SSS   | dB      | 0                      |   |
| EPRE ratio of PDCCH to PDCCH DMRS | dB      | 0                      |   |
| EPRE ratio of PDSCH DMRS to SSS   | dB      | 0                      |   |
| EPRE ratio of PDSCH to PDSCH DMRS | dB      | -3                     | To reduce interference from PDSCH of intra-frequency neighbour cells. |
| EPRE ratio of PTRS to PDSCH       | dB      | 3                      | i.e. the EPRE ratio of PTRS to SSS is 0dB                             |

Note 1: Power level chosen to align with cell power level as specified in clause 6.2.2.

**Table 6.2.1.2-2: Power allocation for OFDM symbols and reference signals for signalling test cases (multiple beam)**

| Parameter   | Unit    | Value                  | Comment  |
|---|---------|------------------------|--|
| Reference cell power EPRE <sub>CellRef</sub>                      | dBm/SCS | Test specific (Note 1) |  |
| EPRE ratio of SSS <sub>SSB#N</sub> to EPRE <sub>CellRef</sub>     | dB      | Test specific (Note 2) | power of SSS within SSB with index N   |
| EPRE ratio of PSS <sub>SSB#N</sub> to SSS <sub>SSB#N</sub>        | dB      | 0                      | power of PSS within SSB with index N   |
| EPRE ratio of PBCH DMRS <sub>SSB#N</sub> to SSS <sub>SSB#N</sub>  | dB      | 0                      | power of PBCH DMRS within SSB with index N   |
| EPRE ratio of PBCH <sub>SSB#N</sub> to PBCH DMRS <sub>SSB#N</sub> | dB      | 0                      | power of PBCH within SSB with index N  |
| EPRE ratio of PDCCH DMRS to EPRE <sub>CellRef</sub>               | dB      | 0                      | (Note 3)   |
| EPRE ratio of PDCCH to PDCCH DMRS                                 | dB      | 0                      |  |
| EPRE ratio of PDSCH DMRS to EPRE <sub>CellRef</sub>               | dB      | 0                      | (Note 3)   |
| EPRE ratio of PDSCH to PDSCH DMRS                                 | dB      | -3                     | To reduce interference from PDSCH of intra-frequency neighbour cells.                          |
| EPRE ratio of PTRS to PDSCH                                       | dB      | 3                      | i.e. the EPRE ratio of PTRS to EPRE <sub>CellRef</sub> is 0dB                                  |
| EPRE ratio of CSI-RS <sub>N</sub> to EPRE <sub>CellRef</sub>      | dB      | Test specific (Note 2) | power of CSI-RS with index N; CSI-RS configured if required by a test case in TS 38.523-1 [12] |

Note 1: Power level chosen to align with cell power level as specified in clause 6.2.2.

Note 2: Test cases may specify "OFF" in which case the attenuation shall result in an absolute EPRE value being equal or less than the power level specified for a non-suitable "Off" cell in clause 6.2.2.

Note 3: In general the UE cannot distinguish from which beam DL data is sent  $\Rightarrow$  PDCCH and PDSCH are considered as cell specific rather than beam specific.

## 6.2.2 Signal levels

### 6.2.2.1 Signal Levels for conducted testing

For NR FR1 cell, the downlink power settings in Table 6.2.2.1-1 and 6.2.2.1-2 are used unless otherwise specified in a test case.

**Table 6.2.2.1-1: Default Downlink power levels for FR1 NR cell (5MHz – 25MHz)**

|   | SCS(kHz) | Unit             | Channel bandwidth |       |       |       |       |
|---|----------|------------------|-------------------|-------|-------|-------|-------|
|   |          |                  | 5MHz              | 10MHz | 15MHz | 20MHz | 25MHz |
| Channel BW Power  | 15       | dBm              | -63               | -60   | -58   | -57   | -56   |
|   | 30       | dBm              | -67               | -63   | -61   | -60   | -59   |
|   | 60       | dBm              | N/A               | -67   | -65   | -63   | -62   |
| SS/PBCH SSS EPRE  | All      | dBm/SCS (Note 3) | -88               | -88   | -88   | -88   | -88   |
| Note 1: The channel bandwidth powers are informative, based on -88 dBm/ SCS(SubCarrier Spacing) SS/PBCH SSS EPRE, then scaled according to the number of RBs and rounded to the nearest integer dBm value. Full RE allocation with no boost or deboost is assumed.<br>Note 2: The power level is specified at each UE Rx antenna.<br>Note 3: DL level is applied for any of the Subcarrier Spacing configuration ( $\mu$ ) with the same power spectrum density of -88 dBm/SCS(SubCarrier Spacing). |          |                  |                   |       |       |       |       |

**Table 6.2.2.1-2: Default Downlink power levels for FR1 NR cell (30MHz – 100MHz)**

|   | SCS(kHz) | Unit             | Channel bandwidth |       |       |       |       |       |        |
|---|----------|------------------|-------------------|-------|-------|-------|-------|-------|--------|
|   |          |                  | 30MHz             | 40MHz | 50MHz | 60MHz | 80MHz | 90MHz | 100MHz |
| Channel BW Power  | 15       | dBm              | -55               | -54   | -53   | N/A   | N/A   | N/A   | N/A    |
|   | 30       | dBm              | -58               | -57   | -56   | -55   | -54   | -53   | -53    |
|   | 60       | dBm              | -61               | -60   | -59   | -58   | -57   | -56   | -56    |
| SS/PBCH SSS EPRE  | All      | dBm/SCS (Note 3) | -88               | -88   | -88   | -88   | -88   | -88   | -88    |
| Note 1: The channel bandwidth powers are informative, based on -88dBm/SCS(SubCarrier Spacing) SS/PBCH SSS EPRE, then scaled according to the number of RBs and rounded to the nearest integer dBm value. Full RE allocation with no boost or deboost is assumed.<br>Note 2: The power level is specified at each UE Rx antenna.<br>Note 3: DL level is applied for any of the Subcarrier Spacing configuration ( $\mu$ ) with a power spectrum density of -88dBm/SCS(SubCarrier Spacing). |          |                  |                   |       |       |       |       |       |        |

With simultaneous transmission of 24 RBs, a maximum of -78dBm/SCS SS/PBCH SSS EPRE can be allocated as cell power level.

The default settings of suitable cells and non-suitable cells for NR are specified in table 6.2.2.1-3.

Cells which are expected to be undetectable for UE under test shall fulfil the condition of non-suitable "Off" cell in table 6.2.2.1-3.

**Table 6.2.2.1-3: Default settings of suitable / non-suitable cells**

| Power level type   | NR<br>(Note 1-3) |             | E-UTRAN             |
|--|------------------|-------------|---------------------|
|  | Unit             | Power level |                     |
| Serving cell   | dBm/SCS          | -88         | Table 6.2.2.1-1 [2] |
| Suitable neighbour intra-frequency cell  | dBm/SCS          | -94         | Table 6.2.2.1-1 [2] |
| Suitable neighbour inter-frequency cell  | dBm/SCS          | -99         | Table 6.2.2.1-1 [2] |
| Non-suitable cell  | dBm/SCS          | -115        | Table 6.2.2.1-1 [2] |
| Non-suitable "Off" cell  | dBm/SCS          | $\leq -145$ | Table 6.2.2.1-1 [2] |
| Note 1: The power level is specified in terms of SS/PBCH SSS EPRE instead of RSRP as RSRP is a measured value and cannot be directly controlled by the Full RE allocation with no boost or deboost is assumed. SS.<br>Note 2: The power level is specified at each UE Rx antenna.<br>Note 3: DL level is applied for any of the Subcarrier Spacing configuration ( $\mu$ ) with the same power spectrum density of -88dBm/SCS.<br>Note 4: The default settings assume that the UE is making relative measurements of neighbour cells compared to the serving cell. |                  |             |                     |

The default signal level uncertainty is specified in table 6.2.2.1-4 for any level specified, unless a tighter uncertainty is specified by a test case in TS 38.523-1 [12].

**Table 6.2.2.1-4: SS signal level uncertainty**

|   | Absolute signal level uncertainty for each cell | Relative signal level uncertainty between multiple cells |
|---|---|--|
| Intra-frequency   | +/-3 dB at each test port                       | +/-3 dB  |
| Inter-frequency   | +/-3 dB at each test port                       | See Note 1   |
| Note 1: For Inter-frequency cells the relative signal level uncertainty between multiple cells is determined by the absolute uncertainty of each cell, and does not have any additional constraint. |   |  |

SS/PBCH SSS EPRE setting should be equal to or higher than -115 dBm except for Non-suitable "Off" cell. The figure is chosen to ensure that for all bands the DL signal is within the RSRP measurement range specified in TS 38.133 [13], taking into account the SS default absolute signal level uncertainty.

NOTE: (The power spectral density of a white noise source; specified in TS 38.133 [13]) can be assumed to be - Infinity [dBm/SCS] for all intra and inter frequency test cases. It is applicable to both idle mode and connected mode in TS 38.523-1 [12], unless otherwise specified in specific test cases.

### 6.2.2.1.1 Measurement accuracy and side conditions

RSRP measurement accuracy in RRC\_CONNECTED state is specified in table 6.2.2.1.1-1, derived from TS 38.133 [13] clauses 10.1.2 and 10.1.4 selecting Normal condition with maximum Io less than -50 dBm/BW<sub>Channel</sub>. The ranges and side conditions in TS 38.133 [13] clauses 10.1.2 and 10.1.4 apply. This measurement accuracy is applicable to connected mode test cases specified in TS 38.523-1 [12]. For the serving cell and suitable neighbour cells, the following side conditions shall be satisfied including the effect of signal level uncertainty.

- RSRP  $\geq -124$  dBm
- RSRP  $\hat{E}_s/I_{ot} > -6$  dB
- Io: 117.5 dBm/SCS for 15kHz SCS and -114.5 dBm/SCS for 15kHz SCS dBm/SCS ... -50 dBm/BW<sub>Channel</sub> (for absolute and relative RSRP measurement accuracy).

RSRP measurement accuracy in RRC\_CONNECTED state is specified in table 6.2.2.1.1-1, derived from TS 38.133 [13] clauses 10.1.2 and 10.1.4 selecting Normal condition.

**Table 6.2.2.1.1-1: RSRP measurement accuracy in RRC\_CONNECTED state**

|                 | Absolute RSRP measurement accuracy | Relative RSRP measurement accuracy |
|-----------------|------------------------------------|------------------------------------|
| Intra-frequency | +/-8 dB                            | +/-3 dB                            |
| Inter-frequency | +/-8 dB                            | +/-4.5 dB                          |

### 6.2.2.2 Signal Levels for OTA testing

**Editor's Note:** It is FFS whether some or all of the restrictions listed in the working assumptions below will be removed.

The power levels defined in this clause are based on the following assumptions:

- No more than one E-UTRA cell is configured in the test case and this E-UTRA cell uses an uncalibrated OTA link with no power level change.
- No more than one NR FR1 cell is configured in the test case and this NR FR1 cell uses an uncalibrated OTA link with no power level change.
- AWGN is not configured in the test case

For NR FR2 cell, the downlink power settings in Table 6.2.2.2-1 are used unless otherwise specified in a test case.

**Table 6.2.2.2-1: Default Downlink power levels for FR2 NR cell (50MHz - 400MHz)**

|  | SCS(kHz) | Unit    | Channel bandwidth |        |        |        |
|--|----------|---------|-------------------|--------|--------|--------|
|  |          |         | 50MHz             | 100MHz | 200MHz | 400MHz |
| Channel BW Power   | 60       | dBm     | FFS               | FFS    | FFS    | FFS    |
|  | 120      | dBm     | -57               | -57    | -57    | -57    |
| SS/PBCH SSS EPRE   | All      | dBm/SCS | -82               | -82    | -82    | -82    |
| Note 1: The channel bandwidth powers are informative, based on -82 dBm/SCS SS/PBCH SSS EPRE, then scaled according to the number of RBs and rounded to the nearest integer dBm value. A maximum RE allocation of 24 simultaneously transmitted RBs with no boost or deboost is assumed.<br>Note 2: The power level is specified at the centre of quiet zone. |          |         |                   |        |        |        |

The default settings of suitable cells and non-suitable cells for NR FR2 are specified in table 6.2.2.2-2.

NR FR2 cells which are expected to be undetectable for UE under test shall fulfil the condition of non-suitable "Off" cell in table 6.2.2.2-2.

**Table 6.2.2.2-2: Default settings of suitable / non-suitable FR2 NR cells**

| Power level type   | NR (Note 1-3) |             |
|--|---------------|-------------|
|  | Unit          | Power level |
| Serving cell   | dBm/SCS       | -82         |
| Suitable neighbour intra-frequency cell  | dBm/SCS       | -91         |
| Suitable neighbour inter-frequency cell  | dBm/SCS       | -91         |
| Non-suitable cell  | dBm/SCS       | -100        |
| Non-suitable "Off" cell  | dBm/SCS       | $\leq -139$ |
| Note 1: The power level is specified in terms of SS/PBCH SSS EPRE instead of RSRP as RSRP is a measured value and cannot be directly controlled by the SS.<br>Note 2: The power level is specified at the centre of quiet zone.<br>Note 3: DL level is applied for any of the Subcarrier Spacing configuration ( $\mu$ ) with the same power spectrum density in dBm/SCS (SubCarrier Spacing). |               |             |

For E-UTRA cell with FR2 NR, since the LTE OTA link is uncalibrated in the signalling test setup, the table 6.2.2.2-3 provides only suggestive value. It is left to the TE vendor to ensure that LTE cell power level fulfils the cell selection criteria.

**Table 6.2.2.2-3: Default Downlink power levels for E-UTRA cells with NR FR2**

|  | Unit      | Channel bandwidth |       |       |        |        |        |
|--|-----------|-------------------|-------|-------|--------|--------|--------|
|  |           | 1.4 MHz           | 3 MHz | 5 MHz | 10 MHz | 15 MHz | 20 MHz |
| Number of RBs  |           | 6                 | 15    | 25    | 50     | 75     | 100    |
| Channel BW Power   | dBm       | -77               | -73   | -71   | -68    | -66    | -65    |
| RS EPRE  | dBm/15kHz | -96               | -96   | -96   | -96    | -96    | -96    |
| Note 1: The channel bandwidth powers are informative, based on -96 dBm/15kHz RS_EPRE, then scaled according to the number of RBs and rounded to the nearest integer dBm value. Full RE allocation with no boost or deboost is assumed. |           |                   |       |       |        |        |        |
| Note 2: The power level is specified at the centre of quiet zone.  |           |                   |       |       |        |        |        |

The default settings of suitable cells and non-suitable cells for E-UTRA with FR2 NR are specified in table 6.2.2.2-4.

E-UTRA Cells with FR2 NR which are expected to be undetectable for UE under test shall fulfil the condition of non-suitable "Off" cell in table 6.2.2.2-4.

**Table 6.2.2.2-4: Default settings of suitable / non-suitable E-UTRA cells with NR FR2**

| Power level type  | E-UTRAN<br>(Note 1-2) |             |
|---|-----------------------|-------------|
|   | Unit                  | Power level |
| Serving cell  | dBm/15KHz             | -96         |
| Suitable neighbour intra-frequency cell   | dBm/15KHz             | TBD         |
| Suitable neighbour inter-frequency cell   | dBm/15KHz             | TBD         |
| Non-suitable cell   | dBm/15KHz             | TBD         |
| Non-suitable "Off" cell   | dBm/15KHz             | TBD         |
| Note 1: The power level is specified in terms of cell-specific RS EPRE instead of RSRP as RSRP is a measured value and cannot be directly controlled by the SS. |                       |             |
| Note 2: The power level is specified at the centre of quiet zone.   |                       |             |

The Test system default signal level uncertainty is specified in tables 6.2.2.2-5 and 6.2.2.2-6 for any level specified, unless a tighter uncertainty is specified by a test case in TS 38.523-1 [12].

**Table 6.2.2.2-5: SS Absolute FR2 NR signal level uncertainty**

|                   | Absolute signal level uncertainty   |
|-------------------|-------------------------------------|
| At each frequency | +/-6 dB at centre of the quiet zone |

**Table 6.2.2.2-6: SS Relative FR2 NR signal level uncertainty**

|                   | Relative signal level uncertainty between any two SS EPRE levels at the same frequency |
|-------------------|--|
| At each frequency | +/-2.0 dB  |

For NR cell in FR1 with FR2 NR, since the NR FR1 OTA link is uncalibrated in the signalling test setup, -88dBm/SCS should be applied as defined in the table 6.2.2.1-1 and table 6.2.2.1-2. -88dBm/SCS is suggested value and it is left to the TE vendor to ensure that NR cell power level fulfils the cell selection criteria.

The default settings of suitable cells and non-suitable cells for NR in FR1 with FR2 NR are specified in table 6.2.2.2-7.

NR Cells in FR1 with FR2 NR which are expected to be undetectable for UE under test shall fulfil the condition of non-suitable "Off" cell in table 6.2.2.2-7.

**Table 6.2.2.2-7: Default settings of suitable / non-suitable NR cells in FR1 with NR FR2**

| Power level type   | NR<br>(Note 1-2) |             |
|--|------------------|-------------|
|  | Unit             | Power level |
| Serving cell   | dBm/SCS          | -88         |
| Suitable neighbour intra-frequency cell  | dBm/SCS          | TBD         |
| Suitable neighbour inter-frequency cell  | dBm/SCS          | TBD         |
| Non-suitable cell  | dBm/SCS          | TBD         |
| Non-suitable "Off" cell  | dBm/SCS          | TBD         |
| Note 1: The power level is specified in terms of SS/PBCH SSS EPRE instead of RSRP as RSRP is a measured value and cannot be directly controlled by the SS. |                  |             |
| Note 2: The power level is specified at the centre of quiet zone.  |                  |             |

## 6.2.3 Default test frequencies

**Editor's note:** For FR2 test frequencies using 100 MHz default channel bandwidth it is FFS if 100MHz channel bandwidth can be used for FR2 multicell protocol testing.

### 6.2.3.1 Test frequencies for NR standalone signalling testing

The default channel bandwidth for signalling test is specified per NR band. The test frequencies are defined so that no frequency overlapping takes place, in order to avoid unnecessary inter-frequency interference.

For signalling test cases, the mapping of frequency ranges to NR test frequencies are as follows:

- for band with only one test frequency (e.g. n51): Low Range (NRf1);
- for band with up to two test frequencies: Low Range (NRf1) and High Range (NRf2);
- for band with up to three test frequencies: Low Range (NRf1), Mid Range (NRf2) and High Range (NRf3);
- for band with up to four test frequencies: Low Range (NRf1), Mid Low Range (NRf2), Mid High Range (NRf3) and High Range (NRf4);

The signalling test frequencies NRf5, NRf6, NRf7 are mapped respectively as NRf1, NRf2, NRf3 on the operating band for inter-band.

The test frequencies, subcarrier spacing, default channel bandwidth, SS/PBCH block and CORESET#0 parameters for signalling is specified in Table 6.2.3.1-1 (FDD FR1 BW 5MHz), Table 6.2.3.1-2 (FDD FR1 BW 10MHz), Table 6.2.3.1-3 (TDD FR1 BW 5MHz), Table 6.2.3.1-4 (TDD FR1 BW 10MHz), Table 6.2.3.1-4A (TDD FR1 BW 60MHz), Table 6.2.3.1-5 (TDD FR1 BW 100MHz), Table 6.2.3.1-6 (TDD FR2 BW 100MHz) and Table 6.2.3.1-7 (NR FDD FR1 SUL bands).

Table 6.2.3.1-1: Test frequencies for NR FDD FR1 bands using 5 MHz channel bandwidth

| NR Band | SCS [kHz] | CBW [MHz] | carrierBandwidth [PRBs] | Range    | Carrier centre [MHz] | Carrier centre [ARFCN]  | point A [MHz] | absoluteFrequencyPointA [ARFCN] | offsetToCarrier [Carrier PRBs] | SS block SCS [kHz] | GSCN | absoluteFrequencySSB [ARFCN] | $k_{SSB}$ | Offset Carrier CORE SET#0 [RBs] | CORE SET#0 Index (Offset [RBs]) Note 1 | offsetToPointA (SIB1) [PRBs] Note 1 |    |
|---------|-----------|-----------|-------------------------|----------|----------------------|---|---------------|---------------------------------|--------------------------------|--------------------|------|------------------------------|-----------|---------------------------------|--|-------------------------------------|----|
| n5      | 15        | 5         | 25                      | Downlink | Low, High            | Same values as for Low and High range in clause 4.3.1.1.15 for bandwidth=5 MHz and SCS=15 kHz.        |               |                                 |                                |                    |      |                              |           |                                 |  |                                     |    |
|         |           |           |                         |          | Mid-Low              | 878.2   | 175640        | 873.79                          | 174758                         | 12                 | 15   | 2197                         | 175730    | 0                               | 1                                      | 2 (4)                               | 17 |
|         |           |           |                         |          | Mid-High             | 884.8   | 176960        | 878.23                          | 175646                         | 24                 |      | 2212                         | 176930    | 8                               | 1                                      | 0 (0)                               | 25 |
|         |           |           |                         | Uplink   | Low, High            | Same values as for Low and High range in clause 4.3.1.1.15 for bandwidth=5 MHz and SCS=15 kHz.        |               |                                 |                                |                    |      |                              |           |                                 |  |                                     |    |
|         |           |           |                         |          | Mid-Low              | 833.2   | 166640        | 824.47                          | 164894                         | 36                 | -    | -                            | -         | -                               | -                                      | -                                   | -  |

| Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-1 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2. |    |   |    |                    |                   |  |        |        |        |     |    |      |        |   |   |       |    |   |  |

Table 6.2.3.1-2: Test frequencies for NR FDD FR1 bands using 10 MHz channel bandwidth

Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-1 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdccch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

Note 2: FR1 carrier without any coreset is indicated in the MIB by setting  $k_{SSB} = 31$ ,  $controlResourceSetZero = 0$  and  $searchSpaceZero = 0$  (TS 38.213 [22], clause 13).

**Table 6.2.3.1-3: Test frequencies for NR TDD FR1 bands using 5 MHz channel bandwidth**

Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-8 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdcch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.

Table 6.2.3.1-7: Test frequencies for NR FDD FR1 SUL bands

| NR Band | SCS [kHz] | CBW [MHz] | <i>carrierBandwidth [PRBs]</i> | Range  |                | Carrier centre [MHz]  | Carrier centre [ARFCN] | point A [MHz] | <i>AbsoluteFrequencyPointA [ARFCN]</i> | <i>offsetToCarrier [Carrier PRBs]</i> |

### 6.2.3.2 Test frequencies for EN-DC band combinations for signalling testing

#### 6.2.3.2.1 General

The default channel bandwidths for EN-DC signalling test are specified per NR and E-UTRA band. The test frequencies are defined so that no frequency overlapping takes place, in order to avoid unnecessary inter-frequency interference.

#### 6.2.3.2.2 E-UTRA 1CC and NR 1CC

For EN-DC Inter-band case with E-UTRA 1CC and NR 1CC (one E-UTRA band and one NR band) the EN-DC configurations are specified in clause 4.3.1.4.1.2 for EN-DC with NR FR1 and 4.3.1.5.1.2 for EN-DC with NR FR2.

The E-UTRA and NR test frequencies are specified in TS 36.508 [2], clause 6.2.3.1 for the E-UTRA band (E-UTRA f1, f2, f3 and f4); and in clause 6.2.3.1 for the NR band (NRf1, NRf2, NRf3, NRf4) and for the secondary NR band (NRf5, NRf6, NRf7) of the secondary EN-DC inter-band configuration.

For EN-DC Intra-band Contiguous case with E-UTRA 1CC and NR 1CC the EN-DC configurations and the test frequencies are specified in Table 6.2.3.2-1.

For EN-DC Intra-band Non-Contiguous with E-UTRA 1CC and NR 1CC case the EN-DC configurations and test frequencies are specified in Table 6.2.3.2-2.

For EN-DC Intra-Band Contiguous and EN-DC Intra-Band Non-Contiguous cases with E-UTRA 1CC and NR 1CC the mapping of frequency ranges to NR test frequencies NRf1, NRf2, NRf3, and NRf4 to PSCell; and to E-UTRA test frequencies f1, f2, f3, and f4 for PCell are as follows:

- for band combinations with only one test frequency: Low Range (NRf1, f1);
- for band combinations with up to two frequencies: Low Range (NRf1, f1), High Range (NRf2, f2);
- for band combinations with up to three frequencies: Mid Range (NRf3, f3), Low Range (NRf1, f1) and High Range (NRf2, f2);
- for band combinations with up to four frequencies: Mid-Low Range (NRf3, f3), High Range (NRf2, f2), Low Range (NRf1, f1) and Mid-High Range (NRf4, f4).

**Table 6.2.3.2.2-1: Test frequencies for EN-DC Intra-band Contiguous configurations with E-UTRA 1CC and NR 1CC**

### 6.2.3.2.3 E-UTRA 1CC and NR CA 2CC

For EN-DC Inter-band case with E-UTRA 1CC and NR CA 2CC the EN-DC configurations are specified in clauses 4.3.1.4.1.2 (two bands) and 4.3.1.4.1.3 (three bands) for EN-DC and NR CA 2CC with FR1 bands, 4.3.1.5.1.2 (two bands) and 4.3.1.5.1.3 (three bands) for EN-DC with NR CA 2CC with FR2 bands and 4.3.1.6.1.2 for EN-DC and NR CA 2CC with FR1 and FR2 bands.

For EN-DC Inter-band case (3 bands), the E-UTRA test frequencies are specified in TS 36.508 [2], clause 6.2.3.1 for the E-UTRA band (E-UTRA f1) and the NR test frequencies are specified in clause 6.2.3.1 for the NR band used as PSCell (NRf1, NRf2, NRf3, NRf4) and for the NR band used as SCell (NRf5, NRf6, NRf7).

For EN-DC Inter-band case (2 bands) with NR Intra-band contiguous CA 2CC and NR Intra-band non-contiguous CA 2CC, the E-UTRA test frequencies are specified in TS 36.508 [2], clause 6.2.3.1 for the E-UTRA band (E-UTRA f1) and the NR test frequencies are specified in clause 6.2.3.4 for the NR CA CC1 used as PSCell (NRf1, NRf3) and for the NR CA CC2 used as SCell (NRf2, NRf4,).

For EN-DC Intra-band Contiguous case with E-UTRA 1CC and NR CA 2CC the EN-DC configurations and the test frequencies are specified in Table 6.2.3.2.3-1.

For EN-DC Intra-band Non-Contiguous case with E-UTRA 1CC and NR 2CC the EN-DC configurations and test frequencies are specified in Table 6.2.3.2.3-2.

For EN-DC Intra-Band Contiguous and EN-DC Intra-Band Non-Contiguous cases with E-UTRA 1CC and NR CA 2CC the mapping of frequency ranges to NR test frequencies NRf1 for PSCell (CC1) and NRf2 for SCell (CC2); and to E-UTRA test frequency f1 for PCell is:

- for band combinations with only one test frequency: Low Range (NRf1=CC1, NRf2=CC2, f1); and
- for band combinations with up to two frequencies: Low Range (NRf1=CC1, NRf2=CC2, f1), High Range (NRf3=CC1, NRf4=CC2, f2).

Editor's note: No EN-DC Intra-band Contiguous configurations with NR CA 2CC have yet been introduced in TS 38.101-3.

**Table 6.2.3.2.3-1: Test frequencies for EN-DC Intra-band Contiguous configurations with E-UTRA 1CC and NR CA 2CC**

FFS

Editor's note: No EN-DC Intra-band Non-Contiguous configurations with NR CA 2CC have yet been introduced in TS 38.101-3.

**Table 6.2.3.3-2: Test frequencies for EN-DC Intra-Band Non-Contiguous configurations with E-UTRA 1CC and NR CA 2CC**

FFS

### 6.2.3.3 Test frequencies for NR and E-UTRA Inter-RAT signalling testing

For NR and E-UTRA Inter-RAT testing, it is assumed that the NR and E-UTRA bands under test are different in order to avoid unnecessary interferences:

- for NR bands, the frequencies NRf1, NRf2, NRf3 and NRf4 are mapped as per clause 6.2.3.1
- for E-UTRA bands, the signalling test frequencies E-UTRA f1, E-UTRA f2, E-UTRA f3 and E-UTRA f4 are mapped respectively on f1, f2, f3 and f4 as per TS 36.508 [2] clause 6.2.3.1.

### 6.2.3.4 Test frequencies for NR CA configurations for signalling testing

The default channel bandwidths for NR CA signalling test are specified per NR band. The test frequencies are defined so that no frequency overlapping takes place, in order to avoid unnecessary inter-frequency interference.

For NR CA Inter-band case (2 bands) the NR CA configurations are specified in clause 4.3.1.1.2 and NR test frequencies are specified in clause 6.2.3.1 for the NR band used as PCell (NRf1, NRf2, NRf3, NRf4) and for the NR band used as Scell (NRf5, NRf6, NRf7).

For NR CA Intra-band Contiguous case (2 CCs) the NR CA configurations and the test frequencies are specified in Table 6.2.3.4-1 for FR1 and in Table 6.2.3.4-2 for FR2. For NR CA Intra-band Non-Contiguous (2 CCs) case the NR CA configurations and test frequencies are specified in Table 6.2.3.4-3 for FR1 and in Table 6.2.3.4-4 for FR2.

For NR CA Intra-Band Contiguous case (2 CCs) and NR CA Intra-Band Non-Contiguous case (2 CCs) the mapping of frequency ranges to NR test frequencies NRf1, NRf2, NRf3, and NRf4 and PCell (CC1) and SCell (CC2) are as follows:

- for Intra-band configurations with only one test frequency: Low Range (NRf1=CC1 and NRf2=CC2); and
- for Intra-band configurations with up to two frequencies: Low Range (NRf1=CC1 and NRf2=CC2), High Range (NRf3=CC1 and NRf4=CC2).

**Table 6.2.3.4-1: Test frequencies for NR CA Intra-band Contiguous configurations with FR1**

| NR CA configuration | CC       | CBW [MHz] | carrier Bandwidth [PRBs] | Range             |      | Carrier centre [MHz] Note 2  | Carrier centre [ARFCN] | point A [MHz] | absolute FrequencyPoint A [ARFCN] | offset ToCarrier [Carrier PRBs ] | SS block SCS [kHz] | GSC N | absolute FrequencySSB [ARFCN] | $k_{SSB}$ | Offset Carrier CORE SET#0 [RBs] | CORE SET#0 Index (Offset [RBs]) | offsetTo PointA (SIB1) [PRBs] |

### 6.2.3.5 Test frequencies for MFBI signalling testing

For signalling test cases, the mapping of MFBI frequency ranges to NR test frequencies are as follows: Low Range (NRf1), Mid Range (NRf2) and High Range (NRf3).

The test frequencies, subcarrier spacing, default channel bandwidth, SS/PBCH block and CORESET#0 parameters for signalling are specified in Table 6.2.3.5-1.

**Table 6.2.3.5-1: Test frequencies for MFBI NR bands in FR1**

| NR Band | MFBI overlapping NR Band | SCS [kHz] | Band width [MHz] | carrier bandwidth [PRBs] | Range             | Carrier centre [MHz] | Carrier centre [ARFCN]  | point A [MHz] | absoluteFrequency PointA [ARFCN] | offsetToCarrier [Carrier PRBs] | SS block SCS [kHz] | GS CN | absoluteFrequency SSB [ARFCN] | $k_{SSB}$ | Offset Carrier CORE SET#0 [RBs] | CORESET #0 Index (Offset [RBs]) | offsetToPoint A (SIB1) [PRBs] |
|---------|--------------------------|-----------|------------------|--------------------------|-------------------|----------------------|---|---------------|----------------------------------|--------------------------------|--------------------|-------|-------------------------------|-----------|---------------------------------|---------------------------------|-------------------------------|

| n261  | n257                       | 120        | 100              | 66                         | Downli nk & Uplink | Low, Mid, High       | Same values as for Low, Mid and High range in clause 4.3.1.2.1.5 for bandwidth=100 MHz and SCS=120 kHz. |               |                                    |                                     |                      |      |                                |           |   |  |   |      |  |
| <p>Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-1 in TS 38.213 [22]. The value of CORESET#0 Index is signalled in controlResourceSetZero (pdccch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2.</p> <p>Note 2: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the lowest subcarrier of CORESET#0. It corresponds to the parameter <math>\Delta F_{\text{OffsetCORESET-0-Carrier}}</math> in Annex C expressed in number of common RBs.</p> |                            |            |                  |                            |                    |                      |   |               |                                    |                                     |                      |      |                                |           |   |  |   |      |  |

### 6.2.3.6 Test frequencies for NR DC configurations for signalling testing

The default channel bandwidths for NR DC signalling test are specified per NR band. The test frequencies are defined so that no frequency overlapping takes place, in order to avoid unnecessary inter-frequency interference.

For NR DC (2 bands, 2CC) the NR DC configurations are specified in clause 4.3.1.3.2.1 for 1CC FR1 and 1CC FR2. NR test frequencies are specified in clause 6.2.3.1 for the NR band used as PCell (NRf1, NRf2, NRf3, NRf4) and for the NR band used as PSCell (NRf5, NRf6, NRf7).

For NR DC with NR intra-band contiguous CA (2 bands, 3CC) the NR DC configurations are specified in clause 4.3.1.3.2.1 for 1CC FR1 and 2CC FR2. NR test frequencies are specified in clause 6.2.3.1 for the NR FR1 band used as PCell (NRf1) and in Table 6.2.3.4-2 for NR intra-band contiguous CA as PSCell (CC1, NRf5) and SCell (CC2, NRf6).

## 6.3 Reference system configurations

### 6.3.1 Cell configurations

**Editor's Note:** To define different types of SS cell configurations. It may be similar as defined in 3GPP TS 36.508 [2], clause 6.3.3 and 6.3.4 i.e. full, minimum uplink, broadcast only and virtual cell configuration. But details are FFS and depending on different connectivity options (MR-DC and SA).

#### 6.3.1.1 Intra-frequency neighbouring cell list in SIB3 for NR cells

Intra-frequency neighbouring cell list for signalling test cases is defined in table 6.3.1.1-1. This table is referred to in the default contents of IE *intraFreqNeighCellList* in *SIB3* defined in table 4.6.2-2.

**Table 6.3.1.1-1: Intra-frequency neighbouring cell lists for NR cells**

| cell ID    | Test Frequency | number of entries | intra-frequency neighbouring cell list |           |            |
|------------|----------------|-------------------|--|-----------|------------|
|            |                |                   | physCellId[n]                          | 1         | 1          |
| NR Cell 1  | NRf1           | 3                 | NR Cell 2                              | NR Cell 4 | NR Cell 11 |
| NR Cell 2  | NRf1           | 3                 | NR Cell 1                              | NR Cell 4 | NR Cell 11 |
| NR Cell 4  | NRf1           | 3                 | NR Cell 1                              | NR Cell 2 | NR Cell 11 |
| NR Cell 11 | NRf1           | 3                 | NR Cell 1                              | NR Cell 2 | NR Cell 4  |
| NR Cell 3  | NRf2           | 1                 | NR Cell 23                             | -         | -          |
| NR Cell 23 | NRf2           | 1                 | NR Cell 3                              | -         | -          |

**Editor's Note:** The intra-frequency NR neighbouring cell list for signalling NAS test cases when cells are on same PLMN is FFS.

#### 6.3.1.2 Inter-frequency carrier frequency list in SIB4 for NR cells

Inter-frequency NR carrier frequency list for signalling test cases is defined in table 6.3.1.2-1. This table is referred to in the default contents of IE *interFreqCarrierFreqList* in *SIB4* defined in table 4.6.2-3.

**Table 6.3.1.2-1: Inter-frequency carrier frequency lists for NR cells**

| cell ID  | Test Frequency   | number of entries | interFreqCarrierFreqList |      |      |
|--|------------------|-------------------|--------------------------|------|------|
|  |                  |                   | dl-CarrierFreq[n]        |      |      |
|  |                  |                   | 1                        | 2    | 3    |
| NR Cell 1<br>NR Cell 2<br>NR Cell 4<br>NR Cell 11  | NRf1<br>(Note 2) | 3                 | NRf2                     | NRf3 | NRf5 |
| NR Cell 3<br>NR Cell 23  | NRf2<br>(Note 2) | 3                 | NRf1                     | NRf3 | NRf5 |
| NR Cell 6  | NRf3<br>(Note 2) | 3                 | NRf1                     | NRf2 | NRf5 |
| NR Cell 10   | NRf5<br>(Note 3) | 3                 | NRf1                     | NRf2 | NRf3 |
| Note 1: Depending on the Band under test, NRf3 may not be applicable.<br>Note 2: In case of Test frequency NRf1, NRf2 and NRf3, dl-CarrierFreq NRf5 as part of inter-frequency list is applicable only in case of multi-band scenarios.<br>Note 3: Test frequency NRf5 is applicable only in case of multi-band scenarios. |                  |                   |                          |      |      |

Editor's Note: The inter-frequency NR carrier frequency list for signalling NAS test cases when cells are on same PLMN is FFS.

### 6.3.1.3 E-UTRA carrier frequency list in SIB5 for NR cells

The frequency mapping of E-UTRA cells are defined as per TS 36.508 [2] clause 4.4.2 and TS 36.508 [2] clause 6.3.2 for NGC NAS test cases, E-UTRA frequency mapping is according to clause 6.2.3.3. E-UTRA carrier frequency list for signalling test cases is defined in table 6.3.1.3-1. This table is referred to in the default contents of IE *carrierFreqListEUTRA* in *SIB5* defined in table 4.6.2-4.

**Table 6.3.1.3-1: E-UTRA carrier frequency lists for NR cells**

| interFreqCarrierFreqList   |                |
|--|----------------|
| number of entries  | carrierFreq[n] |
|  | 1              |
| 1  | E-UTRA f1      |
| 2  | E-UTRA f2      |
| 3  | E-UTRA f3      |
| 4  | E-UTRA f4      |
| Note 1: E-UTRAf1, E-UTRAf2, E-UTRAf3, E-UTRAf4 are according to clause 6.2.3.3<br>Note 2: Depending on the Band under test, E-UTRA f2 or E-UTRA f3 or E-UTRA f4 may not be applicable. |                |

**Table 6.3.1.3-2: Void**

### 6.3.2 Default configurations for NAS test cases

The default configurations specified in this subclause apply only to NAS test cases. They apply to all NAS test cases unless otherwise specified.

#### 6.3.2.1 Simulated network scenarios for NAS test cases

Simulated network scenarios for NAS test cases to be tested are specified in the pre-test conditions of each individual test case.

Any combination is allowed with the following restrictions:

- NGC Cell B shall not be used if NGC Cell D is used
- a maximum 3 cells on the same frequency can be used, i.e. only 3 cells out of NGC Cell A, NGC Cell B, NGC Cell C and NGC Cell D may be used simultaneously in each individual test case when cells in the test case are in different PLMNs (refer to Table 6.3.2.2-3).

### 6.3.2.2 Simulated NAS cells

Simulated NAS cells and default NAS parameters are specified in Table 6.3.2.2-1. Unless otherwise specified in a test case, default radio parameters of the NAS cells are specified as per Table 6.3.2.2-2.

Unless otherwise specified, the default parameters specified in clause 4.4.2 will also apply to all NAS cells.

**Table 6.3.2.2-1: Default NAS parameters for simulated NAS cells**

| NAS cell ID | Tracking Area |          |     | TA# list<br>(Note 1) | 5G-GUTI (Note 2) |            |             | 5G-TMSI |  |  |
|-------------|---------------|----------|-----|----------------------|------------------|------------|-------------|---------|--|--|
|             | TA#           | PLMN     |     |                      | AMF Identifier   |            |             |         |  |  |
|             |               | MCC      | MNC |                      | AMF Region ID    | AMF Set ID | AMF Pointer |         |  |  |
| NGC Cell A  | TAI-1         | (Note 3) |     | 1                    | TAI-1            | 254        | 1           | 1       |  |  |
| NGC Cell B  | TAI-2         | (Note 3) |     | 2                    | TAI-2            | 254        | 1           | 1       |  |  |
| NGC Cell C  | TAI-3         | (Note 3) |     | 3                    | TAI-3            | 252        | 1           | 1       |  |  |
| NGC Cell D  | TAI-4         | (Note 3) |     | 4                    | TAI-4            | 252        | 1           | 1       |  |  |
| NGC Cell E  | TAI-12        | 002      | 101 | 3                    | TAI-12           | 244        | 1           | 1       |  |  |
| NGC Cell F  | TAI-11        | 003      | 101 | 2                    | TAI-11           | 239        | 1           | 1       |  |  |
| NGC Cell G  | TAI-7         | (Note 4) | 02  | 1                    | TAI-7            | 238        | 1           | 1       |  |  |
| NGC Cell H  | TAI-8         | (Note 4) | 02  | 2                    | TAI-8            | 237        | 1           | 1       |  |  |
| NGC Cell I  | TAI-9         | 002      | 101 | 1                    | TAI-9            | 244        | 1           | 1       |  |  |
| NGC Cell J  | TAI-10        | 003      | 101 | 1                    | TAI-10           | 236        | 1           | 1       |  |  |

Note 1: The value(s) in the column TA# list indicates TAI(s) included in the response messages of the registration procedure for initial access or mobility (REGISTRATION ACCEPT) when the UE performs the registration procedure on a corresponding cell.

Note 2: The value in the column 5G-GUTI indicates GUTI included in the response messages of the registration procedure (REGISTRATION ACCEPT) when the UE performs the registration procedure on a corresponding cell.

Note 3: Set to the same Mobile Country Code and Mobile Network Code stored in EF<sub>IMSI</sub> on the test USIM card (subclause 4.8.3).

Note 4: Set to the same Mobile Country Code stored in EF<sub>IMSI</sub> on the test USIM card (subclause 4.8.3).

**Table 6.3.2.2-2: Default radio parameters for simulated NAS cells when cells are in same PLMN and access stratum is NR**

| NAS cell ID | Frequency | NR Cell ID<br>(Note 1) |
|-------------|-----------|------------------------|
| NGC Cell A  | NRf1      | NR Cell 1              |
| NGC Cell B  | NRf1      | NR Cell 2              |
| NGC Cell C  | NRf1      | NR Cell 4              |

| NGC Cell I  | MCC=002<br>MNC=101          | NRf3      | NR Cell 6              |
| NGC Cell J  | MCC=002<br>MNC=101          | NRf3      | NR Cell 13             |

Note 1: Default NR parameters for simulated NR cells are as specified in Table 4.4.2-2  
 Note 2: for signalling tests, simultaneous co-existence of NGC Cells B and D is not allowed (In line with Table 4.4.2-1)

## 6.4 Signalling Test Case specific USIM Configurations

### 6.4.1 General

The default USIM fields are specified in section 4.8.3. Specific USIM fields are set according to the USIM configuration specified in the tables below. PLMN settings are defined in TS 36.523-1 [42] Table 6.0.1-1.

Note: Changes to any existing USIM configuration can be done only if the change WILL NOT HAVE IMPACT on any of the tests which are referring to the configuration! To establish whether this might be the case, the test case author needs to review all tests in all RAN5 test specifications, which refer to the particular USIM configuration e.g. all test cases in TS 38.523-1 [12].

**Table 6.4.1-1: USIM Configuration 1**

| USIM field              | Priority    | Value  | Access Technology Identifier       |
|-------------------------|-------------|--|------------------------------------|
| EF <sub>IMSI</sub>      |             | The HPLMN (MCC+MNC) of the IMSI is set to PLMN1.   |                                    |
| EF <sub>PLMNwAcT</sub>  | 1<br>2<br>3 | Default<br>PLMN17<br>PLMN16<br>Remaining mandatory entries use default values                    | Default<br>All specified<br>NG-RAN |
| EF <sub>OPLMNwACT</sub> | 1           | PLMN15<br>Remaining defined entries use default values   | All specified                      |
| EF <sub>HPLMNwAct</sub> | 1           | PLMN1  | NG-RAN                             |
| EF <sub>UST</sub>       |             | Services 20, 42, 43 and 74 are supported. Service 71 is not supported (there is no EHPLMN list). |                                    |
| EF <sub>HPPLMN</sub>    |             | 1 (6 minutes)  |                                    |

**Table 6.4.1-2: USIM Configuration 2**

| USIM field                | Priority | Value  | Access Technology Identifier |
|---------------------------|----------|--|------------------------------|
| EF <sub>5GS3GPPLOCI</sub> |          | PLMN4  |                              |

## 7 Test environments for RRM tests

### 7.0 General

#### 7.0.1 Single PDU configuration for RRM testing

For RRM test case execution on 5G SA UEs defined in TS 38.533 [18] 7.1 Requirements, IMS shall not be considered and UE's shall be able use RRC (IDLE, CONNECTED) preambles defined in TS 38.508-1 Section 4.5. Before entering RRC\_CONNECTED or RRC\_IDLE state during initial conditions or test procedure, it is recommended that UE is pre-configured with only 1 PDU (non-IMS) along with appropriate settings to ensure UE operates and stays on NR cell.

For EN-DC settings the corresponding requirement holds that IMS shall not be considered and it is recommended that UE is pre-configured with only 1PDU/1 PDN.

### 7.1 Test equipment requirements

#### 7.1.1 Void

#### 7.1.2 Void

#### 7.1.3 Requirements for OTA test method

##### 7.1.3.1 General

Editor's Note:

- The UE pre-configuration mentioned below to disable UL Tx diversity schemes shall be voided once a test methodology solution to minimize spectral flatness artefacts between TE and UE over all test points is defined.

For conformance testing using the OTA test environment, the UE under test shall be pre-configured with UL Tx diversity schemes disabled to account for single polarization System Simulator (SS) in the test environment. The UE under test may transmit with dual polarization.

##### 7.1.3.2 RRM baseline setup

The RRM baseline setup shall fulfil the capabilities detailed in this section.

The following permitted test setups are considered for OTA RRM testing:

- DFF test setup as described in Clause B.2.2.
- Simplified DFF test setup as described in Clause B.2.3.
- IFF test setup as described in Clause B.2.4.
- Enhanced IFF test setup based in the IFF test setup described in Clause B.2.4, with the enhancements described in this clause.
- IFF+DFF Hybrid teset setup as described in Clause B.2.2 for DFF TRxP(s) and B2.4 for IFF TRxP(s), with the enhancements described in this clause.

###### 7.1.3.2.1 General description

TRxPs and Cells:

- Up to 2 NR transmission reception points TRxPs are emulated.

## Support of interworking scenarios

- For test scenarios involving both, LTE and NR FR2 carriers, the test setup shall be capable to provide LTE link to the DUT. The emulated LTE cell provides a stable LTE signal without precise propagation modelling or path loss control between it and the DUT. No performance verification for and relative to LTE carriers is supported.
- For test scenarios involving both, NR FR1 and NR FR2 carriers, the test setup shall be capable to provide NR FR1 link to the DUT. The NR FR1 link has a stable and noise-free signal without precise path loss or polarization control. No performance verification for and relative to NR FR1 carriers is supported.

## Antennas, polarization, simultaneously active AoAs:

- N dual-polarized antennas transmitting the signals from the emulated gNB sources to the DUT.
- The antennas transmit into the test zone in such a way that signal polarization does not prevent the DUT receiving a consistent, predictable power level.
- $N \geq N_{MAX\_AoAs}$ , where  $N_{MAX\_AoAs}$  is the maximum number of simultaneously active (emulating signal) angles of arrival AoAs. The  $N_{MAX\_AoAs}$  for the different permitted test methods is:
  - For UE RRM baseline measurement setup based on DFF, the supported  $N_{MAX\_AoAs} = 2$ .
  - For UE RRM baseline measurement setup based on simplified DFF, the supported  $N_{MAX\_AoAs} = 1$ .
  - For UE RRM baseline measurement setup based on IFF, the supported  $N_{MAX\_AoAs} = 1$ .
  - For UE RRM baseline measurement setup based on enhanced IFF, the supported  $N_{MAX\_AoAs} = 2$ .
  - For UE RRM baseline measurement setup based on IFF+DFF, the supported  $N_{MAX\_AoAs} = 2$ .

## Angular Relationship:

- A positioning system such that an angular relationship with two axes of freedom is provided between the DUT and the test system antennas (or the setup should provide equivalent functionality).
- For  $N_{MAX\_AoAs} = 2$  the setup shall enable following relative angular relationships between the  $N_{MAX\_AoAs}$  simultaneously active AoAs:  $30^\circ, 60^\circ, 90^\circ, 120^\circ$  and  $150^\circ$ .
- For single active probe scenarios, in case that step change of AoA is required, the setup shall enable following relative angular change between initial and target AoA:  $30^\circ, 60^\circ, 90^\circ, 120^\circ$  and  $150^\circ$ .

Wanted and noise (AWGN) signals can be transmitted from one or both active probes. Test description will define the exact signal/noise/SNR/SINR level per TRxP at the reference point.

## Multiple DL transmission antenna ports:

- In case of multiple DL transmission antenna ports are required for RRM testing, the different antenna ports are mapped to different polarizations.

## Measurement Uncertainty:

- The threshold MU for the equivalence framework for RRM will be based on direct far field (DFF) test method for  $D \leq 5$  cm and on indirect far field (IFF) test method for  $D > 5$  cm. If the MTSU for the IFF test method for  $D \leq 5$  cm is finalized before DFF, the IFF MTSU shall be used as provisional threshold MU until DFF is completed.

### 7.1.3.2.2 Applicability criteria

The applicability criteria for the RRM measurement setup based on DFF is described in B.2.2.1.

The applicability criteria for the RRM measurement setup based on simplified DFF is described in B.2.3.1.

The applicability criteria for the RRM measurement setup based on IFF is described in B.2.4.1.

The applicability criteria for the RRM measurement setup based on enhanced IFF is described in B.2.4.1:

The applicability criteria for the RRM measurement setup based on IFF+DFF follows DFF as described in B.2.2.1:

### 7.1.3.2.3 Measurement distance and quiet zone

For RRM baseline measurement setup based on DFF:

- The measurement distance defined for the DFF UE RF test method described in B.2.2.4 applies.
- A DFF measurement setup has the centre of the Quiet Zone (QZ) located at the centre of the rotational axes (of DUT and measurement antenna). For the RRM measurement baseline setup based on DFF, the vertices of the N probes have to be aligned to the resulting centre of the QZ. The centre of the QZ is taken as the reference point for MU definition for each probe. The same QZ size as for DFF UE RF test method described in B.2.2.2 applies.

For RRM baseline measurement setup based on simplified DFF:

- The measurement distance defined for the simplified DFF UE RF test method described in B.2.3.4 applies.
- The same QZ size and definition as for simplified DFF UE RF test method described in B.2.3.2 applies.

For RRM baseline measurement setup based on IFF:

- The measurement distance defined for the IFF UE RF test method described in B.2.4.4 applies.
- The Quiet Zone definition for the IFF UE RF test method described in B.2.4.2 applies.

For RRM baseline measurement setup based on enhanced IFF:

- The measurement distance defined for the IFF UE RF test method described in B.2.4.4 applies.
- An IFF measurement setup has the centre of the Quiet Zone (QZ) located at the centre of the rotational axes (of DUT). For the RRM measurement baseline setup based on IFF, the reflectors have to be aligned to transmit a plane wave to the resulting centre of the QZ. The centre of the QZ is taken as the reference point for MU definition for each reflector. The QZ is a sphere of radius R. The size of the QZ defined in B.2.4.2 applies.

For RRM baseline measurement setup based on IFF+DFF:

- For IFF TRxPs, the measurement distance defined for the IFF UE RF test method described in B.2.4.4 applies.
- For DFF TRxPs, the measurement distance defined for the DFF UE RF test method described in B.2.2.4 applies.
- An IFF+DFF measurement setup has the centre of the Quiet Zone (QZ) located at the centre of the rotational axes (of DUT). For the RRM measurement baseline setup based on IFF+DFF, IFF reflectors have to be aligned to transmit a plane wave to the resulting centre of the QZ, and the vertices of the DFF probes have to be aligned to the resulting centre of the QZ. The centre of the QZ is taken as the reference point for MU definition for each reflector or probe. The QZ is a sphere of radius R. The size of the QZ defined in B.2.4.2 applies for IFF TRxPs and B.2.2.2 for DFF TRxPs.

### 7.1.3.2.4 Quality of the quiet zone

For RRM, the quality of the quiet zone validation defined in Annex O of TS 38.521-2 [15] needs to assess only the single-directional EIRP and EIS metrics. For measurement setups with multiple probes, the QoQZ procedure needs to be performed with all probes present and in the conditions used for RRM testing.

The quality of the quiet zone for the RRM measurement setup based on DFF is described in B.2.2.3. The QoQZ validation needs to be performed only with the reference probe P0.

The quality of the quiet zone for the RRM measurement setup based on simplified DFF is described in B.2.3.3.

The quality of the quiet zone for the RRM measurement setup based on IFF is described in B.2.4.3.

The quality of the quiet zone for the RRM measurement setup based on enhanced IFF is described in B.2.4.3. The QoQZ validation needs to be performed only with the reference reflector, P0, if same sized IFF reflectors are used..

The quality of the quiet zone for the RRM measurement setup based on IFF+DFF is described in B.2.4.3 for IFF probes and in B.2.2.3 for DFF probes. The QoQZ validation needs to be performed only with the one probe among all DFF probes and one probe among all IFF probes.

## 7.2 Reference test conditions

### 7.2.1 Signal levels

7.2.1.1 Void

7.2.1.2 Void

### 7.2.2 Physical layer parameters

#### 7.2.2.1 Downlink physical layer parameters

As defined in clause 4.3.6 with the following exceptions:

**Table 7.2.2.1-1: Physical layer parameters for DCI format 1\_1**

| Derivation Path: Table 4.3.6.1.2.2-1 |   |                 |
|--------------------------------------|---|-----------------|
| Parameter                            | Value   | Value in binary |
| PUCCH resource indicator             | <i>PUCCH-ResourceId[1] = 0 in pucch-ResourceSetID[1] as defined in Table 4.6.3-112 (Mapping as per Table 9.2.3-2 in TS 38.213 [22])</i> | “000”           |

### 7.2.3 Default test frequencies

#### 7.2.3.1 Default test frequencies FR1 NR operating bands

For FR1 NR operating bands the test frequencies for RRM testing are specified in clause 4.3.1.1.

#### 7.2.3.2 Default test frequencies FR2 operating bands

## 7.2.3.2.1

Reference test frequencies for NR operating band n257

**Table 7.2.3.2.1-1: Test frequencies for NR operating band n257 (SCS 120 kHz,  $\Delta F_{\text{Raster}}$  120 kHz, SSB SCS=120kHz, kSSB=0 and Offset(RBs)=0)**

| CBW [MHz]   | carrier Bandwidth [PRBs] | Range             |     | Carrier centre [MHz] | Carrier centre [ARFCN] | point A [MHz] | absolute FrequencyPoint A [ARFCN] | offsetTo Carrier [Carrier PRBs] | SS block SCS [kHz] | GSCN  |
|---|--------------------------|-------------------|-----|----------------------|------------------------|---------------|-----------------------------------|---------------------------------|--------------------|-------|
| 100   | 66                       | Downlink & Uplink | Mid | 28015.68             | 2079427                | 27968.16      | 2078635                           | 0                               | 120                | 22472 |
| Note 1: The CORESET#0 Index and the associated CORESET#0 Offset refers to Table 13-8 in TS 38.213 [22]. The value controlResourceSetZero (pdccch-ConfigSIB1) in the MIB. The offsetToPointA IE is expressed in units of resource blocks 60 kHz subcarrier spacing for FR2.<br>Note 2: The parameter Offset Carrier CORESET#0 specifies the offset from the lowest subcarrier of the carrier and the low parameter $\Delta F_{\text{OffsetCORESET-0-Carrier}}$ in Annex C expressed in number of common RBs. |                          |                   |     |                      |                        |               |                                   |                                 |                    |       |

**Table 7.2.3.2.1-2: Test frequencies for NR operating band n257 (SCS 120 kHz,  $\Delta F_{\text{Raster}}$  120 kHz, SSB SCS=240kHz, kSSB=0 and Offset(RBs)=0)**

| CBW [MHz]  | carrier Bandwidth [PRBs] | Range             |     | Carrier centre [MHz] | Carrier centre [ARFCN] | point A [MHz] | absolute FrequencyPoint A [ARFCN] | offsetTo Carrier [Carrier PRBs] | SS block SCS [kHz] | GSCN  |

## 7.4 FFS

Void.

## 7.5 Common procedures for RRM testing

### 7.5.1 Procedure to configure SCC(s) for NR RRM CA testing

Same procedure as described in clause 5.5.1.

### 7.5.2 Procedure to configure SCC(s) for EN-DC RRM CA testing

Same procedure as described in clause 5.5.1.

---

## Annex A (informative): Connection Diagrams

### A.1 Definition of Terms

**System Simulator or SS** – A device or system, that is capable of generating simulated Node B signalling and analysing UE signalling responses on one or more RF channels, in order to create the required test environment for the UE under test. It will also include the following capabilities:

1. Measurement and control of the UE Tx output power through TPC commands
2. Measurement of Throughput
3. Measurement of signalling timing and delays
4. Ability to simulate UTRAN and/or E-UTRAN and/or GERAN signalling

**Test System** – A combination of devices brought together into a system for the purpose of making one or more measurements on a UE in accordance with the test case requirements. A test system may include one or more System Simulators if additional signalling is required for the test case. The following diagrams are all examples of Test Systems.

NOTE 1: The above terms are logical definitions to be used to describe the test methods used in the documents TS 38.521-1, TS 38.521-2, TS 38.521-3, TS 38.523-1 and TS 38.533 in practice, real devices called 'System Simulators' may also include additional measurement capabilities or may only support those features required for the test cases they are designed to perform.

NOTE 2: Components in the connection diagrams:

The components in the connection diagrams represent ideal components. They are intended to display the wanted signal flow. They don't mandate real implementations.

**Connection:** Each connection is displayed as a one or two sided arrow, showing the intended signal flow. In some cases, for some tests, some connections shown may not be necessary (for example UL RX connection for a second cell).

**Circulator:** The signal, entering one port, is conducted to the adjacent port, indicated by the arrow. The attenuation among the above mentioned ports is ideally 0 and the isolation among the other ports is ideally  $\infty$ .

**Splitter:** a splitter has one input and 2 or more outputs. The signal at the input is equally divided to the outputs. The attenuation from input to the outputs is ideally 0 and the isolation between the outputs is ideally  $\infty$ .

**Combiner:** a combiner has one output and 2 or more inputs. The signals at the inputs are conducted to the output, all with the same, ideally 0 attenuation. The isolation between the inputs is ideally  $\infty$ .

**Switch:** contacts a sink (or source) alternatively to two or more sources (or sinks).

**Fader:** The fader has one input and one output. The MIMO fading channel is represented by several single faders (e.g. 8 in case of a MIMO antenna configuration 4x2) The correlation among the faders is described in TS 36.521-1 clause B.2.2. In some cases, for some tests, diagrams with fader(s) are referenced when no fading is required; in this case the fader(s) is omitted.

**Attenuator:** TBD

**Test Equipment Part (TE):** is the section of the connection diagram focused including a combination of devices to perform one or several measurements on a UE depending on the test requirements specified in 3GPP TS 38.101-1 [7], 3GPP TS 38.101-2 [8] and 3GPP TS 38.101-3 [9]. The basic TE is the system simulator to enable the connection between the gNB (and the eNB, if NSA mode) and the DUT. The number of cells, the number of streams per cell and how to combine them, channel and propagations conditions, etc. are also part of the TE. Other instruments as external spectrum analyser, interferer generators, external faders or external AWGN generators can be also considered part of the TE, as these instruments allow to measure a test requirement or to set the UE under certain conditions.

**DUT Part (UE):** for conducted measurement this section is focused on the number of physical antenna connectors and how to combine in the DUT. For radiated measurement this section shows the connections needed to translate the UL/DL streams to the radiated part.

## A.2 General considerations on Connections Diagram

In order to improve the maintainability and the readability of this section and to make easy to identify the whole connection diagram to use per each test case, several considerations have been used for this section:

- The whole connection diagram to use for a specific test has been split in Test Equipment (TE) and User Equipment (UE) parts.
- The same connection diagram will be used for SA and NSA, where the LTE link is specified in each connection diagram (TE and UE) with a dashed line (and this part will be only used for NSA).
- To obtain the whole connection diagram required per each test case is necessary to specify the TE part required for each measurement and the UE part will depend on the UE antenna implementation.

## A.3 Setup Diagrams

### A.3.2.5 Four Antenna Connectors

**Figure A.3.2.5.1: User Equipment connection for UEs with NR and LTE RxTx and Rx antenna at different separated connectors**

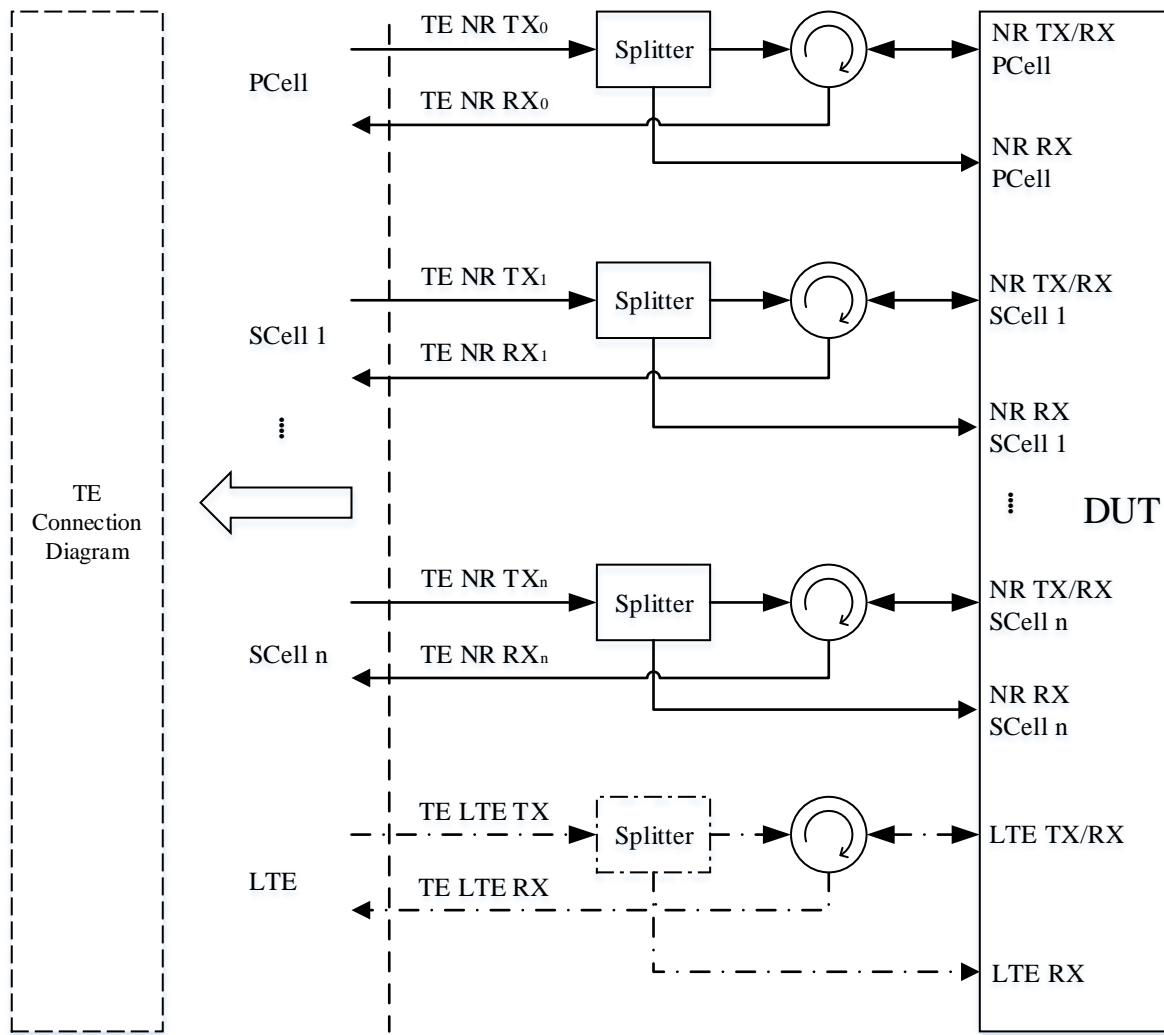

**Figure A.3.2.5.2: User Equipment connection for 4Rx capable UEs without any 2Rx RF bands (NR and LTE at same connectors)**

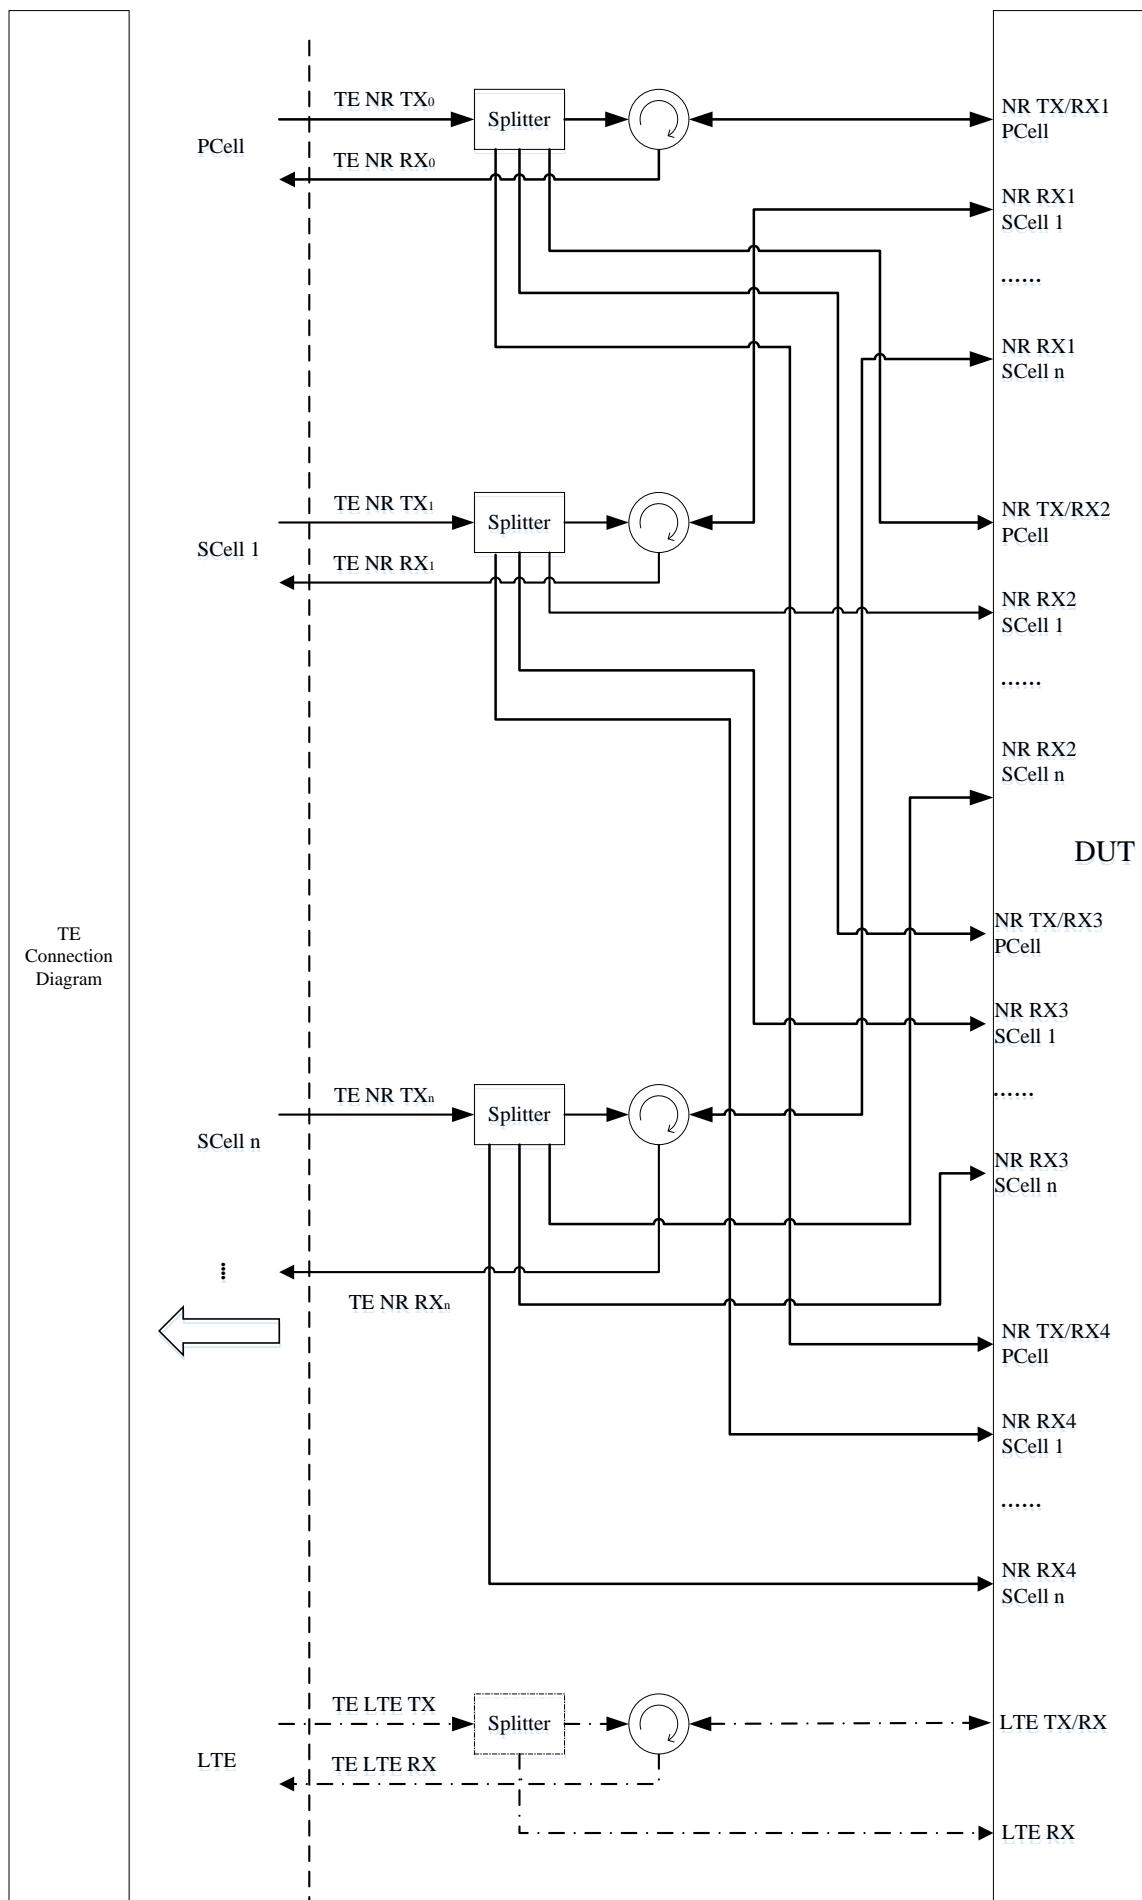

**Figure A.3.2.5.3: User Equipment connection for UEs with NR CA (component carriers on common connector) and LTE**

### A.3.2.6 Over Four Antenna Connectors

**Figure A.3.2.6.1: User Equipment connection for UEs with NR CA (component carriers on separated connectors) and LTE**

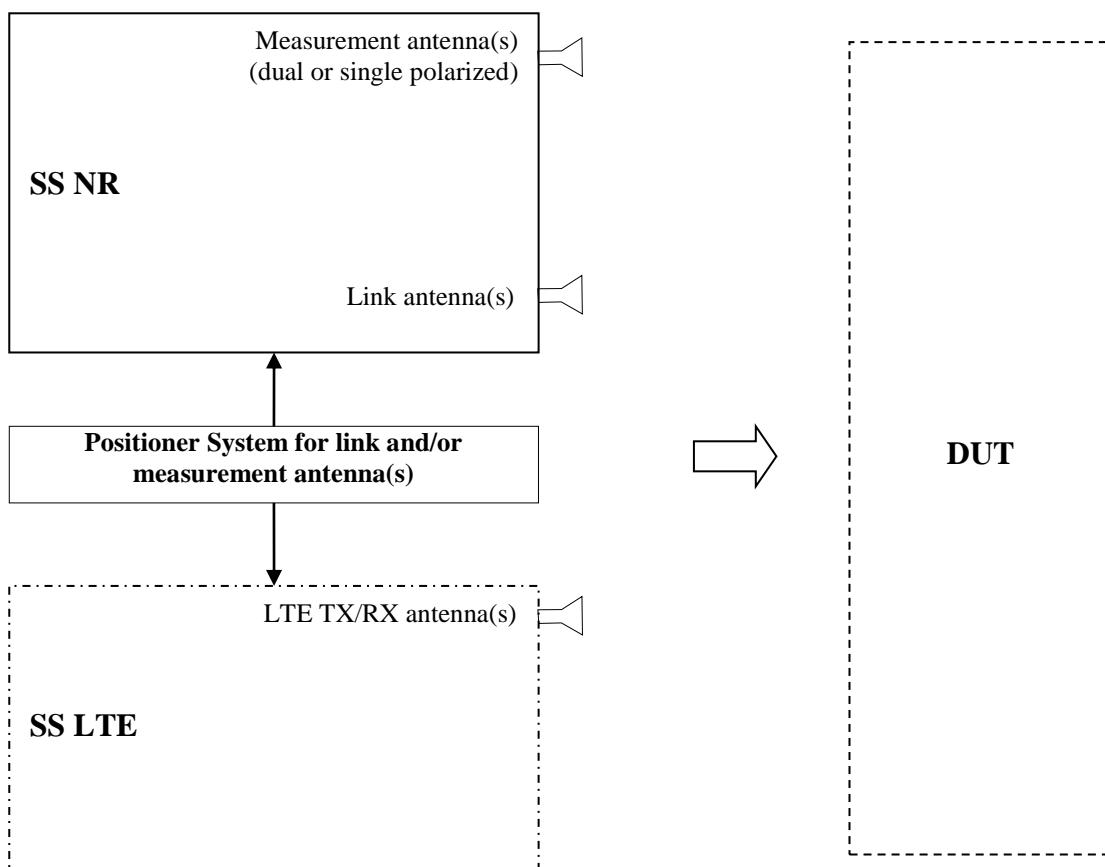

**Figure A.3.2.6.2: User Equipment connection for UEs with NR CA and NR 4Rx (component carriers on separated connectors) and LTE**

(Note: NR may be 2Rx on some of the CCs, in that case RX3 and RX4 are not used).

## A.3.3 Test Equipment Parts for Radiated Measurements

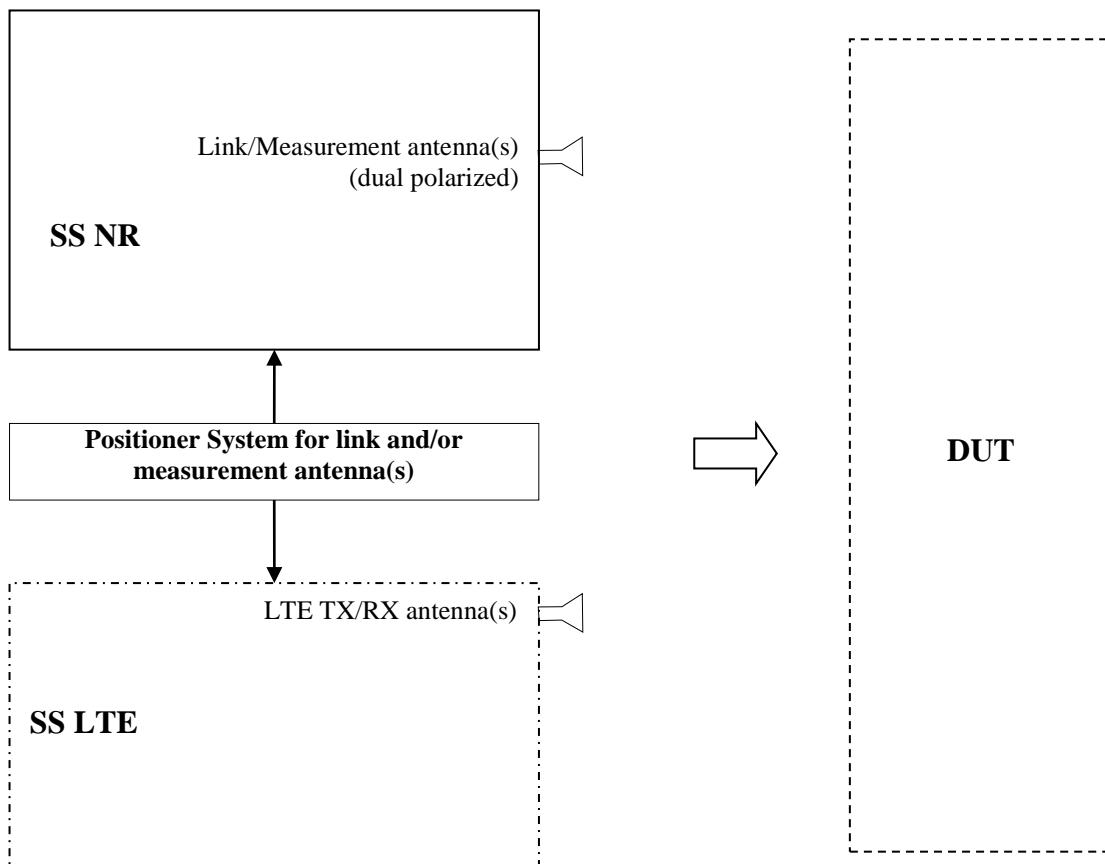

### A.3.3.1 Basic Transmitter/Receiver tests

The Test Equipment part is focused on logical representation of TE measurement and link antenna(s) and positioner controller. The Test Equipment connection diagram below is applicable for NR radiated RX and TX tests, including CA and UL MIMO tests.

**Figure A.3.3.1.1: TE diagram for radiated RX and TX tests**

### A.3.3.2 Demodulation and CSI tests

**Figure A.3.3.2.1: Demodulation and CSI tests**

### A.3.3.3 RRM tests

The Test Equipment part is focused on logical representation of TE antenna(s) and positioner. The Test Equipment connection diagram below is applicable for NR radiated RRM tests. SS NR uses several antennas to cover all required AoA offsets. The actual number of antennas is not determined and depends on the TE implementation. Positioner in the TE part is optional.

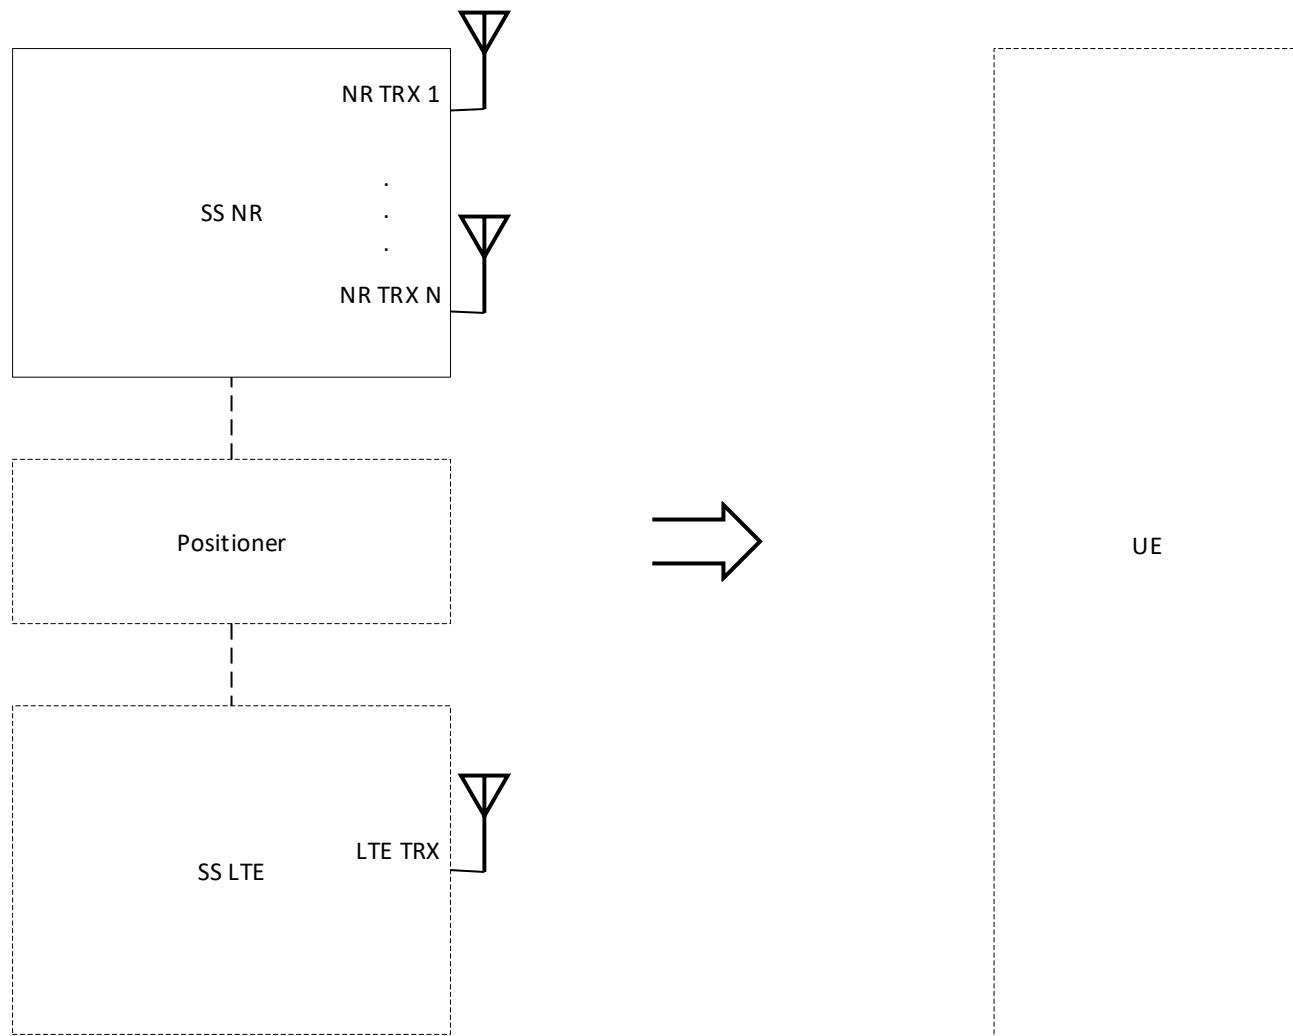

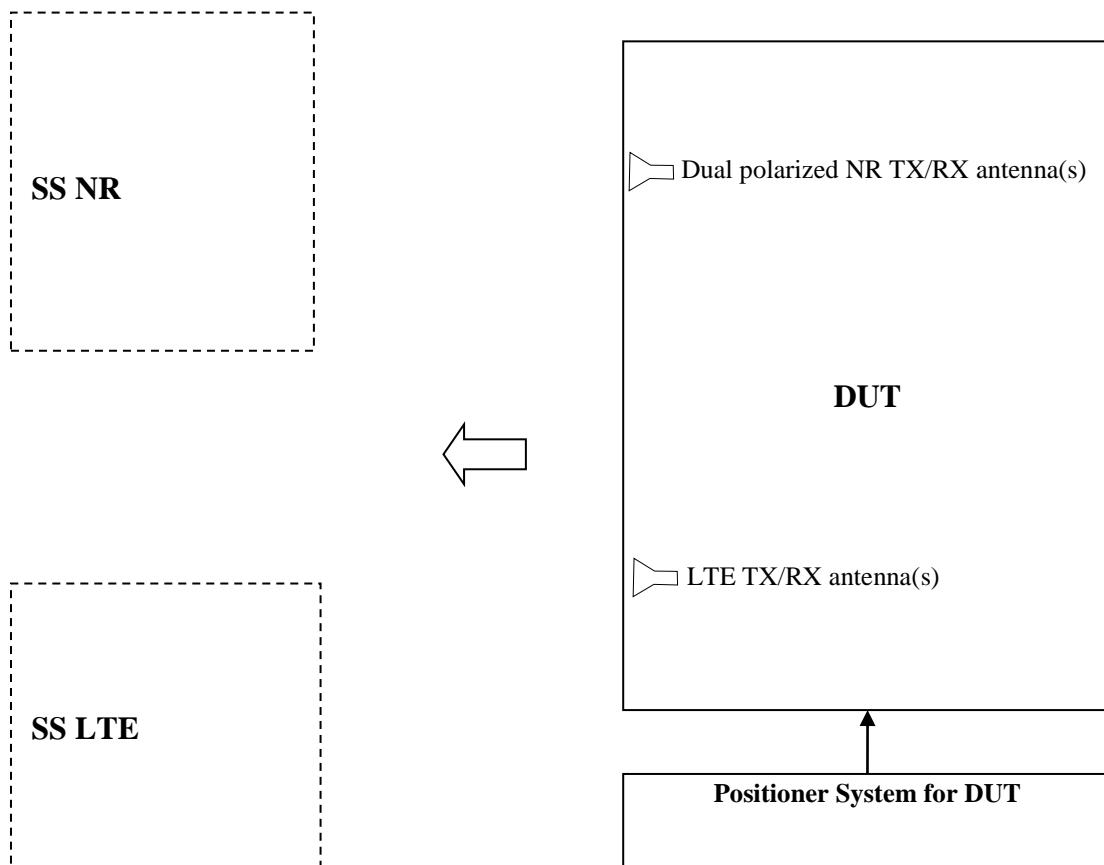

Figure A.3.3.3.1: TE diagram for radiated RRM tests

## A.3.4 User Equipment Parts for Radiated Measurements

### A.3.4.1 Basic Transmitter/Receiver tests

The User Equipment part is focused on logical representation of UE antenna(s), DUT positioner and positioner controller. The UE connection diagram below is applicable for NR radiated RX and TX tests, including CA and UL MIMO tests.

**Figure A.3.4.1.1: UE diagram for radiated RX and TX tests**

### A.3.4.2 Demodulation and CSI tests

Same as Figure A.3.4.1.1.

### A.3.4.3 RRM tests

Same as Figure A.3.4.1.1.

---

## Annex B (normative): Permitted test methods For OTA Testing

### B.1 General

**Editor's Note:** The working assumption is that the DFF or IFF: CATR based OTA test methodologies defined in Annexes B.2.2 and B.2.4 respectively should be used for Signalling test.

The applicability of the permitted test methods herein is defined by the appropriate references within clauses 5, 6, and 7. A summary of the applicability is shown in Table B.1-1.

**Table B.1-1: Permitted Test Methods Applicability Summary**

| FFS |
|-----|
|     |

---

### B.2 Permitted Test Methods

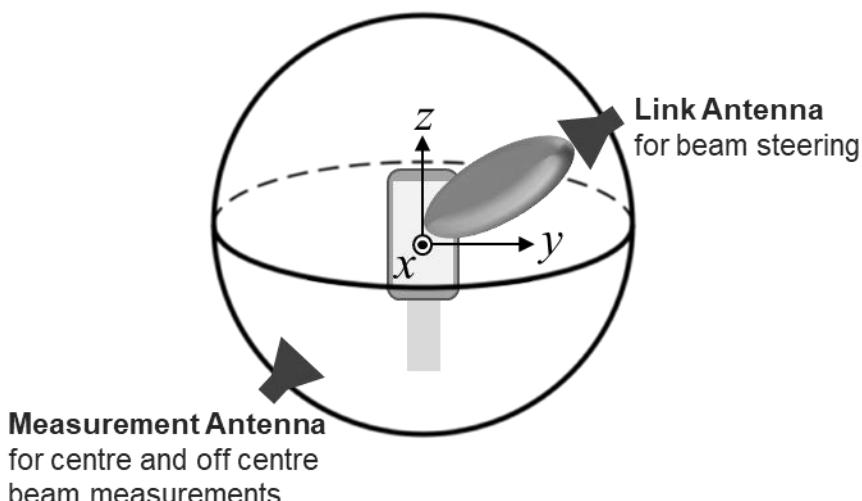

#### B.2.1 General

The main objective of this annex is to specify basic parameters of permitted OTA test methods suitable for RF Tx and Rx, Performance, and RRM measurements and Signalling Conformance tests performed at high frequency in the FR2 operating bands defined in clause 4.3.1.2. The applicability of each OTA test method is summarized in Table B.1-1.

#### B.2.2 Direct far field (DFF)

##### B.2.2.1 Description

The DFF measurement setup for FR2 is capable of centre and off-centre of beam measurements and is shown in Figure B.2.2.1-1 below.

**Figure B.2.2.1-1: DFF measurement setup**

The key aspects of the DFF setup are:

- Far-field measurement system in an anechoic chamber
  - The criterion for determining the far-field distance is described in B.2.2.4.
- A positioning system such that the angle between the dual-polarized measurement antenna and the DUT has at least two axes of freedom and maintains a polarization reference.
- A positioning system such that the angle between the link antenna and the DUT has at least two axes of freedom and maintains a polarization reference; this positioning system for the link antenna is in addition to the positioning system for the measurement antenna and provides for an angular relationship independently controllable from the measurement antenna.
- For setups intended for measurements of UE RF characteristics in non-standalone (NSA) mode with 1 UL configuration, an LTE link antenna is used to provide the LTE link to the DUT. The LTE link antenna provides a stable LTE signal without precise path loss or polarization control.
- For setups intended for measurements in NR CA mode with FR1 and FR2 inter-band NR CA, test setup provides NR FR1 link to the DUT. The NR FR1 link has a stable and noise-free signal without precise path loss or polarization control.

The applicability criteria of the DFF setup are:

- The DUT radiating aperture is  $D \leq 5$  cm
  - Either a single radiating aperture, multiple non-coherent apertures, or multiple coherent apertures DUTs can be tested
  - If multiple antenna panels that are phase coherent are defined as a single array, the criterion on DUT radiating aperture applies to this single array
  - $D$  is based on the MU assessment in Annex B.1.1.3 of TR 38.810 [24]
  - A measurement distance larger than the far-field criteria defined in B.2.2.4 is not precluded
  - If the uncertainties can be further optimized, the MU may be reduced or  $D$  may be increased
- A manufacturer declaration on the following elements is needed unless the entire DUT size is contained in a sphere of diameter of  $\leq 5$  cm:
  - Manufacturer declares antenna array size

## B.2.2.2 Quiet zone dimension

The quiet zone shall be large enough to fully contain the DUT. In order to allow testing of DUTs of various size and to allow for flexibility in test chamber implementations, there will be two defined quiet zone dimensions. The smaller quiet zone shall have a radius of 100mm to accommodate DUTs such as smartphones. The larger quiet zone shall have a radius of 150mm to accommodate larger DUTs such as tablets. The device types are listed as examples and other device types are not precluded. In either case, the DUT shall be fully contained in one of the quiet zone sizes defined herein.

## B.2.2.3 Quality of the quiet zone

The quality of the quiet zone shall be measured for the frequencies defined in FFS. The measured quality of the quiet zone performance is used in uncertainty calculations for the appropriate quality of the quiet zone dimension utilized for the DUT.

## B.2.2.4 Measurement Distance

For far-field measurements, the distance  $R$  between the DUT and the measurement antenna shall be calculated by the following equation.

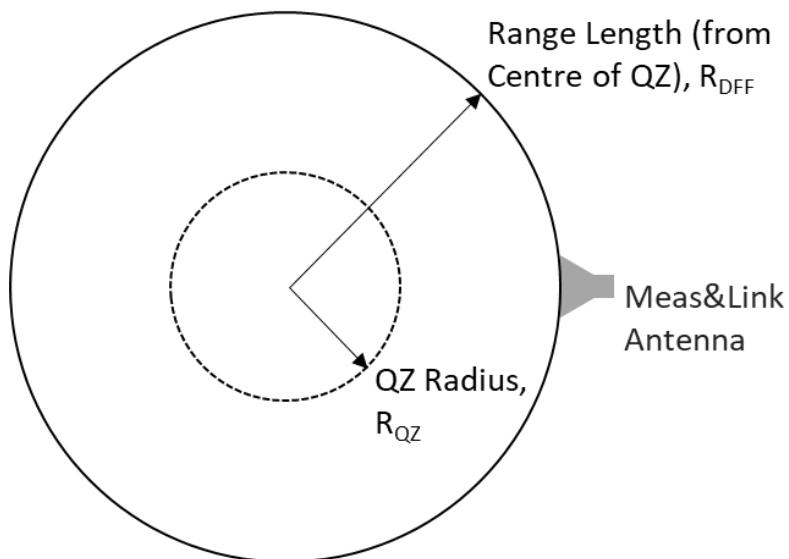

$$R > \frac{2D^2}{\lambda}$$

where  $\lambda$  is the largest wavelength within the frequency band of interest and  $D$  is the diameter of the smallest sphere that encloses the radiating parts of the DUT.

For DFF, free space path loss is calculated by applying the Free Space Loss formula with  $R$  equal to the far field

$$\text{distance: } \left( \frac{4\pi R}{\lambda} \right)^2$$

The minimum range length of a DFF system, i.e., the minimum distance between the centre of the quiet zone and the measurement antenna, needs to take into account the unknown offset of the antenna aperture from the centre of quiet zone in order to guarantee far-field conditions for any antenna array integrated inside the DUT. The distance between the centre of the quiet zone to the measurement antenna is referenced as  $R_{\text{DFF}}$ , while the radius of the quiet zone is  $R_{\text{QZ}}$  as illustrated in Figure B.2.2.4-1. The minimum distance between the antenna array integrated anywhere within the DUT and the measurement antenna needs to meet the far-field distance,  $R_{\text{FF}} = 2D^2/\lambda$ .

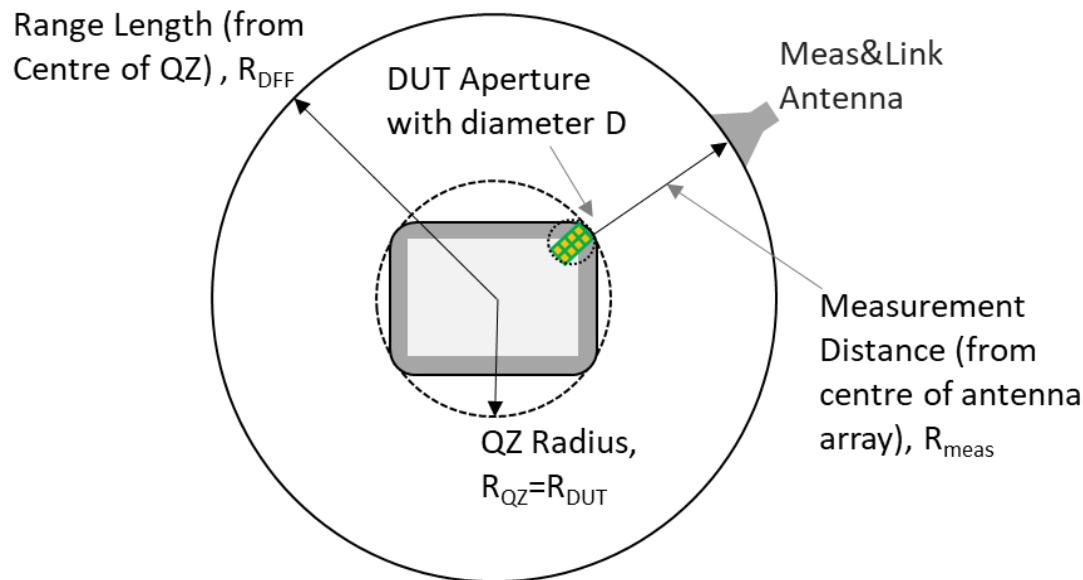

**Figure B.2.2.4-1: Illustration of DFF System for range length definition**

The setup in Figure B.2.2.4-2 is used to derive the minimum range length for NR FR2 DFF systems where the sphere enclosing the DUT matches the QZ and the DUT antenna with radiating aperture diameter  $D$  located in the corner of the DUT. With this setup, the minimum range length,  $R_{\text{DFF}}$ , can be determined as

$$R_{\text{DFF}} = R_{\text{QZ}} - D/2 + R_{\text{FF}} = R_{\text{QZ}} - D/2 + 2D^2/\lambda$$

which is tabulated in Table B.2.2.4-1 for two different QZ sizes assuming  $D=5\text{cm}$ .

**Figure B.2.2.4-2: Illustration of DFF System for minimum range length definition**

**Table B.2.2.4-1: Minimum Range Length of DFF System for  $D = 5\text{cm}$**

| $f[\text{GHz}] \backslash QZ [\text{cm}]$ | 24.25 | 30   | 40   | 50   | 52.6 |
|---|-------|------|------|------|------|
| 20  | 0.48  | 0.58 | 0.74 | 0.91 | 0.95 |
| 30  | 0.53  | 0.63 | 0.79 | 0.96 | 1.00 |

The influence of measurement distance on measurement uncertainty is discussed in Annex B.2.1 of TR 38.903 [XX].

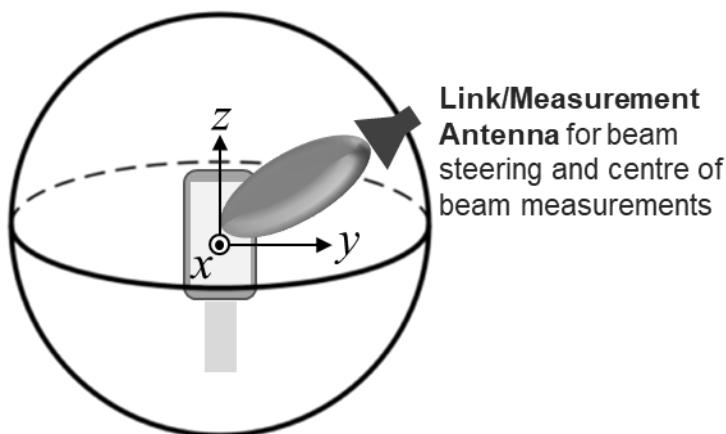

## B.2.3 Direct far field (DFF) setup simplification for centre of beam measurements

### B.2.3.1 Description

The DFF setup in Annex B.2.2 can be simplified in the following way to perform centre of the beam measurements:

- The measurement and the link antenna can be combined so that the single antenna is used to steer the beam and to perform UE measurements.

The measurement setup for FR2 capable of centre of beam measurements is shown in Figure B.2.3.1-1 below.

**Figure B.2.3.1-1: DFF simplification for centre of beam measurement setup**

The applicability criteria of the simplified DFF setup for centre of beam measurements are defined in B.2.2.1.

### B.2.3.2 Quiet zone dimension

Same as Annex B.2.2.2.

### B.2.3.3 Quality of the quiet zone

Same as Annex B.2.2.3.

### B.2.3.4 Measurement Distance

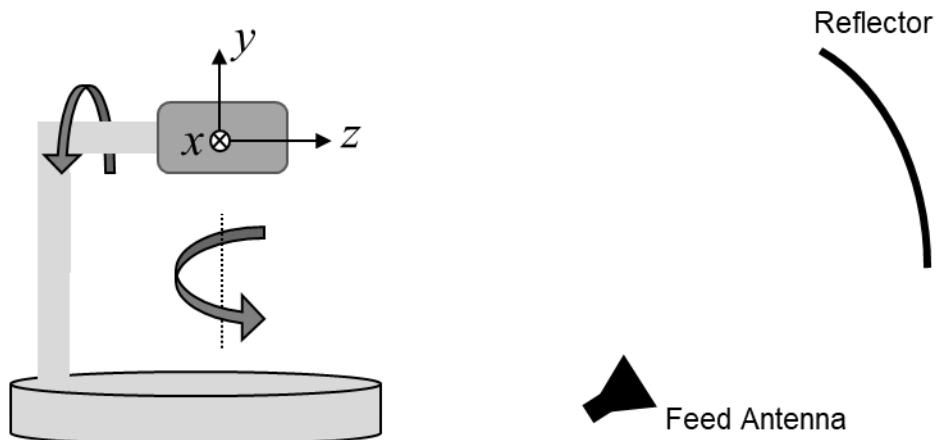

Same as Annex B.2.2.4.

## B.2.4 Indirect far field (IFF): Compact Antenna Test Range (CATR)

### B.2.4.1 Description

The IFF method utilizing a compact antenna test range (CATR) creates the far field environment using a transformation with a parabolic reflector.

The IFF CATR measurement setup for FR2 is capable of centre and off-centre of beam measurements and an example setup is shown in Figure B.2.4.1-1 below. The relative orientation of the coordinate system with respect to the reflector and the axes of rotation apply to any CATR measurement setup.

**Figure B.2.4.1-1: Example of IFF: CATR measurement setup**

The key aspects of this test method setup are:

- Indirect Far Field using Compact Antenna Test Range as described in TR 38.810 [24] with quiet zone diameter that meets the requirements of B.2.4.2.
- A positioning system such that the angle between the dual-polarized measurement antenna and the DUT has at least two axes of freedom and maintains a polarization reference.
- Before performing the UE Beamlock Test Function as defined in clause 4.9.2, the measurement probe acts as a link antenna maintaining polarization reference with respect to the DUT. Once the beam is locked then the link is to be passed to the link antenna which maintains reliable signal level with respect to the DUT.
- For setups intended for measurements of UE RF characteristics in non-standalone (NSA) mode with 1UL configuration, an LTE link antenna is used to provide the LTE link to the DUT. The LTE link antenna provides a stable LTE signal without precise path loss or polarization control.
- For setups intended for measurements in NR CA mode with FR1 and FR2 inter-band NR CA, test setup provides NR FR1 link to the DUT. The NR FR1 link has a stable and noise-free signal without precise path loss or polarization control.

The applicability criteria of this test method are:

- The total test volume, i.e., the quiet zone is defined as a sphere with radius R.
- DUT must fit within the quiet zone for the entire duration of the test.
- Either a single radiating aperture, multiple non-coherent apertures or multiple coherent apertures DUTs can be tested.
- No manufacturer declaration of the antenna array size is needed.

## B.2.4.2 Quiet zone dimension

Same as Annex B.2.2.2.

## B.2.4.3 Quality of the quiet zone

Same as Annex B.2.2.3.

### B.2.4.4 Measurement Distance

The CATR system does not require a measurement distance of  $R > \frac{2D^2}{\lambda}$  to achieve a plane wave as in a standard far field range.

For the CATR system, the far-field distance is seen as the focal length. The focal length is the distance between the feed and the reflector of the CATR. Further information on the focal length of a CATR system can be found in clause 5.2.3.2 of TR 38.810 [24].

The measurement distance for any CATR system implementation shall be adequate to meet the quiet zone dimensions defined in B.2.4.2.

In a CATR, from the reflector to the quiet zone, there is a plane wave with no free space path loss.

For CATR, free space path loss is calculated by applying the Free Space Loss formula with  $R$  equal to the far field distance based on the focal length:  $\left(\frac{4\pi R}{\lambda}\right)^2$ .

A summary of the comparison of path losses which can be expected for the CATR compared to a Fraunhofer limit distance ( $R > \frac{2D^2}{\lambda}$ ) for different antenna sizes and frequencies can be found in clause 5.2.3.2 of TR 38.810 [24].

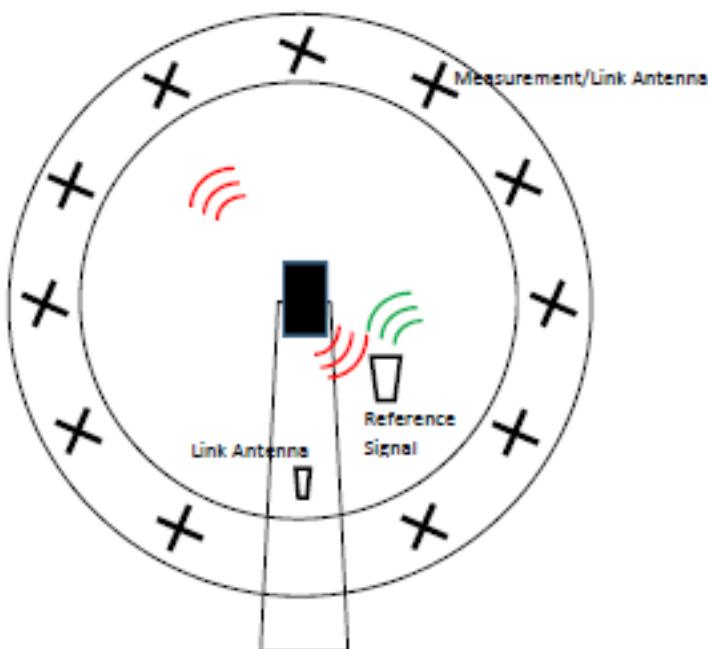

The influence of measurement distance on measurement uncertainty can be considered as zero as defined in Annex B.2.2 of TR 38.903 [XX].

### B.2.5 Near field to far field transform (NFTF)

#### B.2.5.1 Description

The NFTF method computes the metrics defined in Far Field by using the Near Field to Far Field transformation.

The NFTF measurement setup of UE RF characteristics for FR2 is capable of centre and off centre of beam measurements and an example setup is shown in Figure B.2.5.1-1:

**Figure B.2.5.1-1: Example of NFTF measurement setup**

The key aspects of the Near Field test range are:

- Radiated Near Field UE beam pattern is measured and based on the NFTF mathematical transform, the final metric such as EIRP is the same as the metric for the baseline setup
- A positioning system such as the angle between the dual-polarized measurement/link antenna and the DUT has at least two axes of freedom and maintains a polarization reference
- For setups intended for measurements of UE RF characteristics in non-standalone (NSA) mode with 1UL configuration, an LTE link antenna is used to provide the LTE link to the DUT. The LTE link antenna provides a stable LTE signal without precise path loss or polarization control.
- For setups intended for measurements in NR CA mode with FR1 and FR2 inter-band NR CA, test setup provides NR FR1 link to the DUT. The NR FR1 link has a stable and noise-free signal without precise path loss or polarization control.

The applicability criteria of the NFTF setup are:

- The DUT radiating aperture is  $D \leq 5$  cm
- Either a single radiating aperture, multiple non-coherent apertures or multiple coherent apertures DUTs can be tested
- If multiple antenna panels that are phase coherent are defined as a single array, the criterion on DUT radiating aperture applies to this single array
- $D$  is based on the MU assessment in Annex B.1.4.3 of TR 38.810 [24]
- If the uncertainties can be further optimized, the MU may be reduced or  $D$  may be increased
- A manufacturer declaration on the following elements is needed unless the entire DUT size is contained in a sphere of diameter of  $\leq 5$  cm:
  - Manufacturer declares antenna array size
- EIRP, TRP, and spurious emissions metrics can be tested.

### B.2.5.2 Quiet zone dimension

Same as Annex B.2.2.2.

### B.2.5.3 Quality of the quiet zone

Same as Annex B.2.2.3.

### B.2.5.4 Measurement Distance

The NFTF system does not require a measurement distance of  $R > \frac{2D^2}{\lambda}$  as in a standard far field range due to the use of the Near Field to Far Field transformation.

The measurement distance for any NFTF system implementation shall ensure that the DUT is not measured in the reactive near-field region and is adequate to meet the quiet zone dimensions defined in B.2.5.2.

---

## Annex C (informative): Calculation of test frequencies

### C.0 General

Test frequencies are defined in clause 4.3.1 with extensions for signalling test cases in clause 6.2.3. This annex gives a guideline to determine these test frequencies and the associated signalling parameters for a given NR band, NR CA or NR DC band combination.

Clause C.1 describes definitions and parameters used by the procedures to determine test frequencies, SS/PBCH Block (SSB) and CORESET#0 configuration parameters.

Clause C.2 describes how to calculate test frequencies for symmetric NR bands, asymmetric NR bands, NR CA and NR DC configurations.

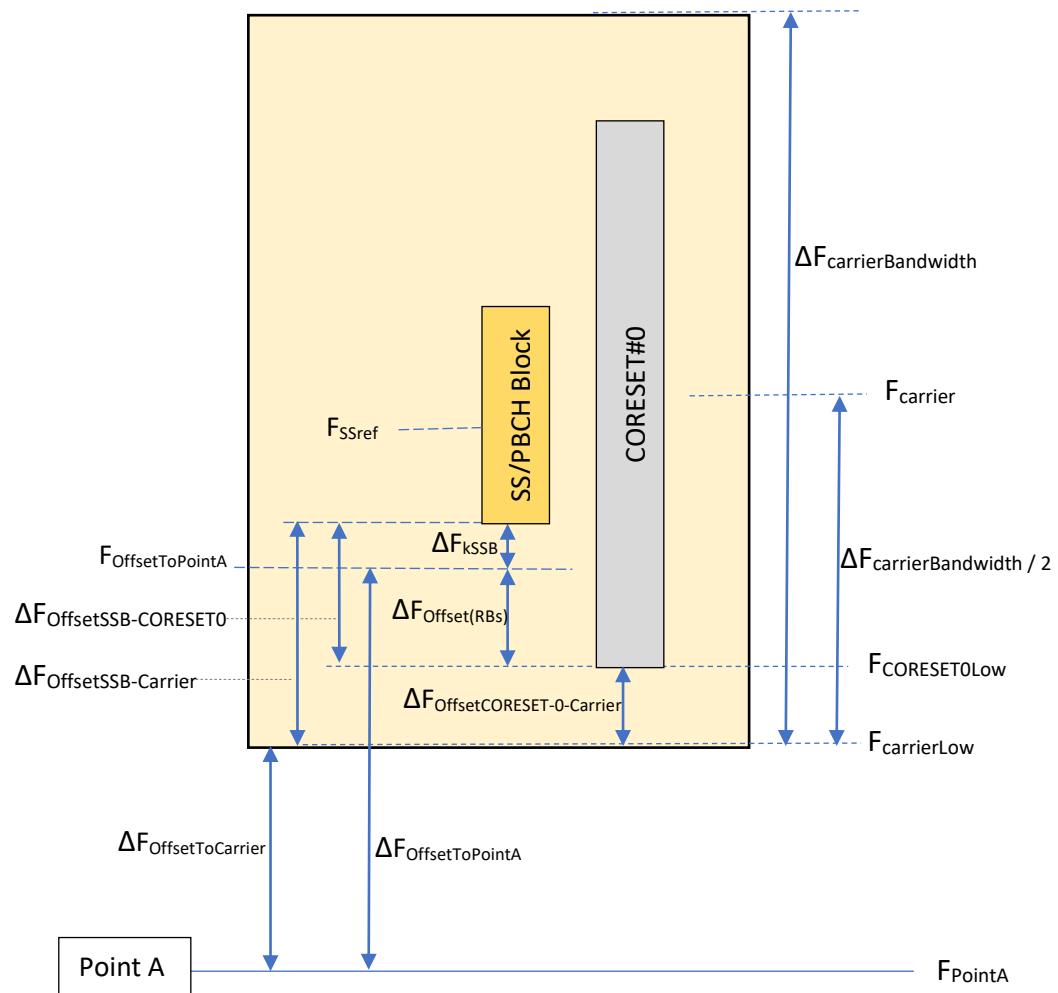

Clause C.3.2 describes how to determine the SSB, CORESET#0 and signalling parameters for a PCell.

Clause C.3.3 describes how to determine the SSB and signalling parameters for a Cell without CORESET#0.

---

### C.1 Definitions and Parameters

Figure C.1-1 shows SSB and CORESET#0 and related parameters.

**Figure C.1-1: location of SSB and CORESET#0 within a channel**

The parameters referenced in figure C.1-1 are defined in Table C.1-1.

**Table C.1-1: Definition of parameters in Figure C.1-1 used in Annex C.**

| Parameter                             | Description   |
|---------------------------------------|---|
| FPointA                               | Reference Point A frequency.  |
| F <sub>carrier</sub>                  | F <sub>carrier</sub> is the centre frequency of a carrier corresponding to its NR-ARFCN value.  |
| F <sub>carrierLow</sub>               | F <sub>carrierLow</sub> is the centre frequency of lowest subcarrier of the carrier.<br>F <sub>carrierLow</sub> = F <sub>carrier</sub> - 12 * SCS <sub>Carrier</sub> * (N <sub>RB</sub> / 2) with N <sub>RB</sub> according to Table 5.3.2-1 of TS 38.101-1 [7] and TS 38.101-2 [8] for the channel bandwidth of the carrier.   |
| ΔF <sub>carrierBandwidth</sub>        | ΔF <sub>carrierBandwidth</sub> is the carrier's channel bandwidth as provided in carrierBandwidth to the UE (SCS-SpecificCarrier).  |
| ΔF <sub>offsetToCarrier</sub>         | ΔF <sub>offsetToCarrier</sub> is the frequency offset between Point A and the lower edge of the carrier. F <sub>offsetToCarrier</sub> = offsetToCarrier * PRB size, where PRB size according to the subcarrier spacing of the carrier. offsetToCarrier is signalled to the UE (SCS-SpecificCarrier).  |
| F <sub>SSref</sub>                    | Centre frequency of SSB. For a cell selectable as PCell the F <sub>SSref</sub> corresponds to a valid GSCN value according to clause 5.4.3.1 of TS 38.101-1 [7] and TS 38.101-2 [8].  |
| ΔF <sub>Offset(RBs)</sub>             | ΔF <sub>Offset(RBs)</sub> = 12 * Offset(RBs) * subCarrierSpacingCommon, where Offset(RBs) is given in tables 13-1 to 13-10 of TS 38.213 [22].   |
| ΔF <sub>kSSB</sub>                    | ΔF <sub>kSSB</sub> = k <sub>SSB</sub> * subcarrier spacing of SSB (SCS <sub>SSB</sub> ).  |
| ΔF <sub>OffsetSSB-CORESET0</sub>      | Frequency offset between the lowest subcarrier of the SSB and the lowest subcarrier of CORESET#0. ΔF <sub>OffsetSSB-CORESET0</sub> = ΔF <sub>Offset(RBs)</sub> + ΔF <sub>kSSB</sub> .   |
| ΔF <sub>OffsetCORESET-0-Carrier</sub> | Frequency offset, F <sub>OffsetCORESET#0-Carrier</sub> , between the lowest subcarrier of CORESET#0 and the lowest subcarrier of the carrier.   |
| ΔF <sub>OffsetSSB-Carrier</sub>       | Frequency offset between the lowest subcarrier of the SSB and the lowest subcarrier of the carrier.   |
| F <sub>CORESET0Low</sub>              | Centre frequency of subcarrier 0 of CORESET#0.  |
| F <sub>OffsetToPointA</sub>           | Frequency of the lowest subcarrier of the lowest resource block, which has the subcarrier spacing provided by the higher-layer parameter subCarrierSpacingCommon and overlaps with the SS/PBCH block used by the UE for initial cell selection, expressed in units of resource blocks assuming 15 kHz subcarrier spacing for FR1 and 60 kHz subcarrier spacing for FR2 (TS 38.211 [29] clause 4.4.4.2). |
| ΔF <sub>OffsetToPointA</sub>          | Frequency offset between F <sub>OffsetToPointA</sub> and point A. ΔF <sub>OffsetToPointA</sub> = offsetToPointA * {15 kHz for FR1; 60 kHz for FR2} (TS 38.211 [29] clause 4.4.4.2).   |

Additional parameters used in this annex are defined in Table C.1-2.

**Table C.1-2: Definition of additional parameters used in Annex C.**

|                                       |  |
|---------------------------------------|--|
| $k_{SSB}$                             | as defined in TS 38.211 [29] clause 7.4.3.1  |
| $SCS_{Carrier}$                       | subcarrier spacing for the carrier ( <i>SCS-SpecificCarrier</i> ):<br>FR1: 15kHz, 30kHz or 60kHz according to TS 38.101-1 [7] Table 5.3.5-1<br>FR2: 60kHz or 120kHz according to TS 38.101-2 [8] Table 5.3.5-1   |
| $SCS_{SSB}$                           | SS/PBCH block subcarrier spacing<br>FR1: 15kHz or 30kHz according to TS 38.101-1 [7] Table 5.4.3.3-1<br>FR2: 120kHz or 240kHz according to TS 38.101-2 [8] Table 5.4.3.3-1<br>NOTE: According to the tables in clause 13 of TS 38.213 [22] not all combinations of $SCS_{SSB}$ and $SCS_{Carrier}$ are applicable. |
| $SCS_{common}$                        | Subcarrier spacing for SIB1, Msg.2/4 for initial access, paging and broadcast SI-messages. Provided to the UE in the MIB in IE <i>subCarrierSpacingCommon</i> .  |
| $PRB_{size}$                          | Physical Resource Block size of the carrier = $12 * SCS_{Carrier}$ .   |
| $CRB_{size}$                          | Common Resource Block size = $12 * SCS_{common}$ .   |
| $F_{DL\_Low}, F_{UL\_Low}$            | Lowest frequency of the downlink and uplink frequency range of the band as defined in clause 5.2 of TS 38.101-1 [7] and TS 38.101-2 [8].   |
| $F_{DL\_High}, F_{UL\_High}$          | Highest frequency of the downlink and uplink frequency range of the band as defined in clause 5.2 of TS 38.101-1 [7] and TS 38.101-2 [8].  |
| $\Delta F_{Raster}$                   | Frequency raster of the band as defined in clause 5.4.2.3 of TS 38.101-1 [7] and TS 38.101-2 [8].  |
| $BW_{DL}$                             | Bandwidth of downlink frequency range of the band.   |
| $BW_{UL}$                             | Bandwidth of uplink frequency range of the band.   |
| $CBW_{DL}$                            | Downlink channel bandwidth (MHz) of the carrier according to Table 5.3.2-1 of TS 38.101-1 [7] and TS 38.101-2 [8].   |
| $CBW_{UL}$                            | Uplink channel bandwidth (MHz) of the carrier according to Table 5.3.2-1 of TS 38.101-1 [7] and TS 38.101-2 [8].   |
| $F_{Tx-Rx\_separation}$               | Default Tx – Rx carrier centre frequency separation of the band as defined in clause 5.4.4 of TS 38.101-1 [7]. For TDD bands $F_{Tx-Rx\_separation} = 0$ .   |
| $\Delta F_{Tx-Rx\_separation}$        | $\Delta F_{Tx-Rx} =  (BW_{DL} - BW_{UL})/2 $ is the deviation to the default Tx-Rx carrier centre frequency separation ( $F_{Tx-Rx\_separation}$ ) for FDD FR1 bands supporting asymmetric channel bandwidths as defined in clause 5.3.6 of TS 38.101-1 [7].   |
| $BW_{SSB}$                            | Bandwidth of the SSB. $BW_{SSB} = 12 * SCS_{SSB} * 20$   |
| $\Delta GSCN, GSCN_{MIN}, GSCN_{MAX}$ | GSCN step size, GSCN minimum and GSCN maximum values for the NR band according to table 5.4.3.3-1 of TS 38.101-1 [7] and TS 38.101-2 [8]   |
| $Offset_{RBs}$                        | Offset (RBs) according to the applicable table 13-1 to 13-10 in TS 38.213 [22] for the given band and $\{SCS_{SSB}, SCS_{Carrier}\}$ combination of the carrier.   |
| $Offset_{RBs,max}$                    | Maximum value for Offset (RBs) for the carrier.  |
| $Offset_{RBs,min}$                    | Minimum value for Offset (RBs) for the carrier.  |

## C.2 Determination of test frequencies

### C.2.0 General

Test frequencies are determined as:

For symmetric NR bands (supporting same bandwidth in UL and DL):

- test frequencies for the supported symmetric channel bandwidth combinations are determined as described in clause C.2.1; and
- the test frequencies for the supported asymmetric channel bandwidth combinations are determined as described in clause C.2.3.

For asymmetric NR bands (supporting different bandwidth in UL and DL):

- the test frequencies for the supported symmetric channel bandwidth combinations are determined as described in clause C.2.2; and
- the test frequencies for the supported asymmetric channel bandwidth combinations are determined as described in clause C.2.3.

For NR CA and NR DC:

- the test frequencies are determined as described in the relevant subclause in C.2.4 depending to the type of configuration.

The carrier test frequencies are determined considering the channel raster according to clause 5.4.2.3 in TS 38.101-1 [7] for FR1 and in TS 38.101-2 [8] for FR2.

## C.2.1 Determination of test frequencies for symmetric NR bands and symmetric uplink and downlink channel bandwidth combinations

### C.2.1.1 Determination of test frequencies for Low-, Mid- and High-Range

Downlink:

|   |             |
|---|-------------|
| $F_{DL\_LowRange} = \text{Ceil}((F_{DL\_Low} + CBW_{DL}/2) / \Delta F_{Raster}) * \Delta F_{Raster}$    | C.2.1.1-Eq1 |
| $F_{DL\_MidRange} = \text{Round}((F_{DL\_Low} + BW_{DL}/2) / \Delta F_{Raster}) * \Delta F_{Raster}$    | C.2.1.1-Eq2 |
| $F_{DL\_HighRange} = \text{Floor}((F_{DL\_High} - CBW_{DL}/2) / \Delta F_{Raster}) * \Delta F_{Raster}$ | C.2.1.1-Eq3 |

$F_{DL\_LowRange}$  is rounded up and  $F_{DL\_HighRange}$  is rounded down to obey to the minimum guard band according to clause 5.3.3 of TS 38.101-1 [7] and TS 38.101-2 [8].

Uplink:

|   |             |
|---|-------------|
| $F_{UL\_LowRange} = F_{DL\_LowRange} - F_{Tx-Rx\_separation}$   | C.2.1.1-Eq4 |
| $F_{UL\_MidRange} = F_{DL\_MidRange} - F_{Tx-Rx\_separation}$   | C.2.1.1-Eq5 |
| $F_{UL\_HighRange} = F_{DL\_HighRange} - F_{Tx-Rx\_separation}$ | C.2.1.1-Eq6 |

### C.2.1.2 Determination test frequencies for of Mid-Low and Mid-High-Range for signalling tests

|   |             |
|---|-------------|
| $F_{Mid-LowRange} = \text{Round}((F_{LowRange} + (F_{HighRange} - F_{LowRange})/3) / \Delta F_{Raster}) * \Delta F_{Raster}$    | C.2.1.2-Eq1 |
| $F_{Mid-HighRange} = \text{Round}((F_{LowRange} + 2*(F_{HighRange} - F_{LowRange})/3) / \Delta F_{Raster}) * \Delta F_{Raster}$ | C.2.1.2-Eq2 |

## C.2.2 Determination of test frequencies for asymmetric NR bands and symmetric uplink and downlink channel bandwidth combinations

Determination of test frequencies for asymmetric NR bands, and symmetric uplink and downlink channel bandwidth combinations are determined using the procedure in clause C.2.3 with  $\Delta F_{Tx-Rx} = 0$ .

## C.2.3 Determination of test frequencies for bands supporting asymmetric channel bandwidth combinations

### C.2.3.1 General

The following procedure is used to calculate test frequencies for NR bands supporting asymmetric UL and DL channel bandwidths as described below, where  $CBW_{UL}$  and  $CBW_{DL}$  refer to the carrier's UL and DL channel bandwidths; and  $BW_{UL}$  and  $BW_{DL}$  refer to the band's total UL and DL bandwidths.

The procedure is also used to calculate test frequencies for symmetric UL and DL bandwidth combinations for asymmetric NR bands.

For FDD bands supporting asymmetric uplink and downlink bandwidth combinations a deviation of  $\Delta F_{TX-RX}$  (C.2.3.1-Eq1) is to be added to the default Tx-Rx carrier centre frequency separation,  $F_{Tx-Rx\_separation}$  (TS 38.101-1 [7] clause 5.3.6).

|  |             |
|--|-------------|
| $\Delta F_{TX-RX} =  (CBW_{DL} - CBW_{UL})/2 $ | C.2.3.1-Eq1 |
|--|-------------|

For the case of asymmetric NR bands and symmetric UL and DL bandwidth combinations  $\Delta F_{TX-RX} = 0$ . To meet the Tx-Rx frequency separation requirement for asymmetric NR bands were the supported overall UL bandwidth is smaller than the supported overall DL bandwidth it may not be possible to cover the full DL frequency range for all UL and DL channel bandwidth combinations. For CA when such band is only used for DL CC the full range can be used for all DL channel bandwidths.

To maximize the tested frequency range for the non-CA case the UL frequency range, as being smaller than the DL frequency range, need to be used as the starting point to calculate the uplink and downlink test frequencies.

### C.2.3.2 Determination of Low-, Mid- and High-Range for bands supporting asymmetric uplink and downlink bandwidth combinations

The following procedure is used to determine the test frequencies for Low-, Mid- and High-Range for bands supporting asymmetric UL and DL bandwidth combinations.

1. Calculate uplink carrier centre frequencies:

|  |             |
|--|-------------|
| $F_{UL\_LowRange} = \text{Ceil}((F_{UL\_Low} + CBW_{UL}/2) / \Delta F_{Raster}) * \Delta F_{Raster}$                   | C.2.3.2-Eq1 |
| $F_{UL\_MidRange} = \text{Round}((F_{UL\_Low} + BW_{UL\_Band}/2) / \Delta F_{Raster}) * \Delta F_{Raster}$             | C.2.3.2-Eq2 |
| $F_{UL\_HighRange} = \text{Floor}((F_{UL\_Low} + BW_{UL\_Band} - CBW_{UL}/2) / \Delta F_{Raster}) * \Delta F_{Raster}$ | C.2.3.2-Eq3 |

2. Calculate the downlink frequencies:

Calculate the DL carrier centre frequencies from the UL frequencies in step 1.

|  |             |
|--|-------------|
| $F_{DL\_LowRange} = F_{UL\_LowRange} + F_{Tx-Rx\_separation} + \Delta F_{Tx-Rx}$   | C.2.3.2-Eq4 |
| $F_{DL\_MidRange} = F_{UL\_MidRange} + F_{Tx-Rx\_separation} + \Delta F_{Tx-Rx}$   | C.2.3.2-Eq5 |
| $F_{DL\_HighRange} = F_{UL\_HighRange} + F_{Tx-Rx\_separation} + \Delta F_{Tx-Rx}$ | C.2.3.2-Eq6 |

3. Check that the calculated centre test frequencies in step 2 for the  $BW_{DL}$  fits within the bands DL frequency range:

If  $F_{DL\_LowRange}$  is smaller than the lowest frequency of the band then recalculate the minimum  $F_{DL\_LowRange}$  and modify the associated  $F_{UL\_LowRange}$  as:

|  |             |
|--|-------------|
| $F_{DL\_LowRange} = \text{Ceil}((F_{DL\_Low} + CBW_{DL}/2) / \Delta F_{Raster}) * \Delta F_{Raster}$ | C.2.3.2-Eq7 |
| $F_{UL\_LowRange} = F_{DL\_LowRange} - F_{Tx-Rx\_separation} - \Delta F_{Tx-Rx}$                     | C.2.3.2-Eq8 |

If  $F_{DL\_HighRange}$  is larger than the higher frequency of the band then recalculate the maximum  $F_{DL\_HighRange}$  and modify the associated  $F_{UL\_HighRange}$  as:

|  |              |
|--|--------------|
| $F_{DL\_HighRange} = \text{Floor}((F_{DL\_Low} + BW_{DL\_Band} - CBW_{DL}/2) / \Delta F_{Raster}) * \Delta F_{Raster}$ | C.2.3.2-Eq9  |
| $F_{UL\_HighRange} = F_{DL\_HighRange} - F_{Tx-Rx\_separation} - \Delta F_{Tx-Rx}$                                     | C.2.3.2-Eq10 |

## C.2.4 Frequency determination for NR CA and NR DC configurations

### C.2.4.1 Determination of test frequencies for NR Inter-band CA and NR DC

Test frequencies for NR Inter-band CA configurations and NR DC use the single carrier test frequencies for each of the included NR bands in the configuration as specified in clause 4.3.1.1.1 for FR1 bands and in clause 4.3.1.2.1 for FR2 bands.

### C.2.4.2 Determination of test frequencies for NR Intra-band Contiguous CA

#### C.2.4.2.1 General

By default, test frequencies for NR Intra-band Contiguous CA in clause 4.3.1 are specified using the nominal channel spacing between the carrier components as specified in TS 38.101-1 [7] clause 5.4A.1 for FR1 and TS 38.101-2 [8] clause 5.4A.1 for FR2. In addition, some NR bands may have test frequencies specified based on an adjusted channel spacing as specified in TS 38.101-1 [7] clause 5.4A.1 for FR1 and TS 38.101-2 [8] clause 5.4A.1 for FR2.

The test frequencies for NR Intra-band Contiguous CA is calculated for each CC and specific test cases can decide which CC is used as PCell. This means that all CC test frequencies is calculated with a CORESET#0.

Note: For NR Intra-band Contiguous CA configurations for bands where Tx frequency range is lower than Rx frequency range the RAN4 requirements for reference sensitivity testing is specified having the PCC frequency lower than the SCC frequencies such that UL PRB maximise the Tx-Rx separation. This means that CC1 shall be used as PCell in the reference test case for bands where Tx frequency range is lower than Rx frequency range; and highest CC shall be used as PCell in the reference test case for bands where Tx frequency range is higher than Rx frequency range.

In addition to the definition of parameters in clause C.1 the following parameters are used to calculate carrier components (CC) test frequencies for NR Intra-band Contiguous and Non-contiguous CA configurations:

| Parameter                        | Description  |
|----------------------------------|--|
| N <sub>CC</sub>                  | Number of CCs in the for NR Intra-band configuration                           |
| CCBW <sub>DL</sub> (i)           | Channel bandwidth (MHz) of downlink CC(i), where i = 1 to N <sub>CC</sub>      |
| F <sub>Channel_Spacing</sub> (i) | Channel spacing between CC(i) and CC(i+1), where i = 1 to (N <sub>CC</sub> -1) |

#### C.2.4.2.2 Determination of test frequencies for Low-, Mid- and High-Range

Downlink CC(1), lowest frequency CC:

F<sub>DL\_LowRange\_CC</sub>(1) is rounded up and F<sub>DL\_HighRange\_CC</sub>(1) is rounded down to obey to the minimum guard band according to clause 5.3.3 of TS 38.101-1 [7] and TS 38.101-2 [8].

|   |               |
|---|---------------|
| F <sub>DL_LowRange_CC</sub> (1) = Ceil((F <sub>DL_Low</sub> + CCBW <sub>DL</sub> (1) / 2) / ΔF <sub>Raster</sub> ) * ΔF <sub>Raster</sub>   | C.2.4.2.2-Eq1 |
| F <sub>DL_MidRange_CC</sub> (1) = Round((F <sub>DL_Low</sub> + BW <sub>DL</sub> /2 - ∑ <sub>k=1 to (N<sub>CC</sub>)</sub> CCBW <sub>DL</sub> (k)/2 + CCBW <sub>DL</sub> (1)/2) / ΔF <sub>Raster</sub> ) * ΔF <sub>Raster</sub>      | C.2.4.2.2-Eq2 |
| F <sub>DL_HighRange_CC</sub> (1) = Floor((F <sub>DL_High</sub> - CCBW <sub>DL</sub> (N <sub>CC</sub> )/2 - ∑ <sub>k=1 to (N<sub>CC</sub>-1)</sub> F <sub>Channel_Spacing</sub> (k)) / ΔF <sub>Raster</sub> ) * ΔF <sub>Raster</sub> | C.2.4.2.2-Eq3 |

Downlink CC(2) to CC(N<sub>CC</sub>), in increasing frequency order:

|   |               |
|---|---------------|
| F <sub>DL_LowRange_CC</sub> (i) = F <sub>DL_LowRange_CC</sub> (i-1) + F <sub>Channel_Spacing</sub> (i)), i=2 to N <sub>CC</sub>   | C.2.4.2.2-Eq4 |
| F <sub>DL_MidRange_CC</sub> (i) = F <sub>DL_MidRange_CC</sub> (i-1) + F <sub>Channel_Spacing</sub> (i)), i=2 to N <sub>CC</sub>   | C.2.4.2.2-Eq5 |
| F <sub>DL_HighRange_CC</sub> (i) = F <sub>DL_HighRange_CC</sub> (i-1) + F <sub>Channel_Spacing</sub> (i)), i=2 to N <sub>CC</sub> | C.2.4.2.2-Eq6 |

Uplink CC(i), i=1 to N<sub>CC</sub>:

|   |               |
|---|---------------|
| $F_{UL\_LowRange\_CC}(i) = F_{DL\_LowRange\_CC}(i) - F_{Tx-Rx\_separation}$   | C.2.4.2.2-Eq7 |
| $F_{UL\_MidRange\_CC}(i) = F_{DL\_MidRange\_CC}(i) - F_{Tx-Rx\_separation}$   | C.2.4.2.2-Eq8 |
| $F_{UL\_HighRange\_CC}(i) = F_{DL\_HighRange\_CC}(i) - F_{Tx-Rx\_separation}$ | C.2.4.2.2-Eq9 |

### C.2.4.3 Determination of test frequencies for NR Intra-band Non-Contiguous CA

#### C.2.4.3.1 General

The default test frequencies in clause 4.3.1 for NR Intra-band Non-Contiguous CA are based on maximum Wgap between the carrier components of the different bands.

Test frequencies with Wgap different from maximum Wgap are specified in the specific test cases using them.

#### C.2.4.3.2 Maximum Wgap, two non-contiguous components

For the case a NR Intra-band Non-Contiguous CA configuration is limited to two non-contiguous components, where each non-contiguous components may be a single CC component or a multi CC contiguous CA component, the test frequencies for each non-contiguous component is selected such that the first component use the test frequency of the Low range and the second component use the test frequency for High range.

If a non-contiguous component is single CC component, then the test frequencies as specified in clause 4.3.1.1.1 for FR1 bands and in clause 4.3.1.2.1 for FR2 bands are used. If a non-contiguous component is a multi CC contiguous CA component, then the test frequencies as specified in clause 4.3.1.1.3 for FR1 bands and in clause 4.3.1.2.3 for FR2 bands are used.

#### C.2.4.3.3 Maximum Wgap, more than two non-contiguous components

For the case a NR Intra-band Non-Contiguous CA configuration includes more than two non-contiguous components, where each non-contiguous components may be a single CC component or a multi CC contiguous CA component the maximum Wgap is calculated as:

|   |               |
|---|---------------|
| $\text{Maximum Wgap} = (\text{BW}_{DL} - \sum_{k=1 \text{ to } (N_{CC}-1)} \text{CCBW}_{DL}(i)) / (N_{CC}-1)$ | C.2.4.3.3-Eq1 |
|---|---------------|

For each non-contiguous components the test frequencies are calculated based on the principles in clause C.2.1 for symmetric NR bands with symmetric uplink and downlink channel bandwidth combinations or; in clause C.2.2 for asymmetric NR bands with symmetric uplink and downlink channel bandwidth combinations; in clause C.2.3 for symmetric or asymmetric NR bands with asymmetric uplink and downlink channel bandwidth combinations.

## C.3 Determination of SSB and CORESET#0

### C.3.1 General

The requirements to be met and the principles used for determining the SSB and CORESET#0 for a PCell are:

1. The complete SSB and CORESET#0 shall be within the carrier's channel bandwidth.
2. The SSB centre frequency (SSref) shall be on the synchronisation raster.
3. The SSB shall be kept as close as possible to the carrier's lower edge centre frequency.
4. CORESET#0 configuration is selected using lowest number of RBs and symbols in applicable table in TS 38.213 [22], clause 13.
5. The first SSB subcarrier shall be aligned with the defined resource grid given by SCS indicated by *subCarrierSpacingCommon* in the MIB.

### C.3.2 Determination of SSB, CORESET#0 and signalling parameters for a PCell

The following procedure is used to determine an SSB on the synchronisation raster (GSCN) and a CORESET#0 configuration ( $k_{SSB}$ ,  $Offset_{RBs}$  and  $OffsetToPointA$ ) as close as possible to the carrier's lower edge. See figure C1-1 and clause C.1 for definition of parameters referenced in the procedure.

1. Determine SSB and CORESET#0:

- 1a. Calculate the lower of  $F_{SSref}$ ,  $F_{SSref\_Min}$ , correspondent to SSB lowest subcarrier being at the same frequency as the carrier's lowest subcarrier; and the higher limit of  $F_{SSref}$ ,  $F_{SSref\_Max}$ , correspondent to SSB highest subcarrier being at the same frequency as the carrier's highest subcarrier  $F_{SSref\_Max}$

|  |
|--|
| $F_{carrierLow} = \text{see formula for } F_{carrierLow} \text{ in Table C.1-1}$ |
| $F_{SSref\_Min} = F_{carrierLow} + CRB_{size} * Offset_{RBs,min} + BW_{SSB} / 2$ |
| $F_{SSref\_Max} = F_{carrierLow} + \Delta F_{carrierBandwidth} - BW_{SSB} / 2$   |

- 1b. Calculate  $GSCN_{MIN}$  correspondent to  $F_{SSref\_Min}$  in accordance to TS 38.101-1 [7], clause 5.4.3.1 for FR1 and TS 38.101-2 [7], clause 5.4.3.1 for FR2 and select the closest valid GSCN value with  $GSCN \geq GSCN_{MIN}$  for the carrier in according to the carrier's synchronisation raster as specified in clause 5.4.3.3 in TS 38.101-1 [7] and TS 38.101-2 [8].
- 1c. Calculate the  $F_{SSref}$  for the selected GSCN value in step 1b in accordance to TS 38.101-1 [7], clause 5.4.3.1 for FR1 and TS 38.101-2 [7], clause 5.4.3.1 for FR2.

- 1d. Calculate the frequency  $F_{offsetToPointA}$ , which is the lowest subcarrier of the lowest resource block with the subcarrier spacing being a multiple of resource blocks expressed in terms of common PRB size and overlaps with the SS/PBCH block subcarrier 0 of the first resource block of the SS/PBCH block,  $F_{SSBlow}$  (TS 38.211 [3], clause 7.4.3.1):

|   |
|---|
| $F_{SSBlow} = F_{SSref} - BW_{SSB} / 2$   |
| $F_{offsetToPointA} = CRB_{size} * \text{Floor}((F_{SSBlow} - F_{carrierLow}) / CRB_{size}) + F_{carrierLow}$ |

- 1e. Calculate the maximum  $Offset_{RBs}$  value with  $F_{CORESET0Low} \geq F_{carrierLow}$ :

|   |
|---|
| $\text{Max\_Offset}_{RBs} = (F_{offsetToPointA} - F_{carrierLow}) / CRB_{size}$ |
|---|

- 1f. Select the largest valid  $Offset_{RBs}$  value equal or smaller than the calculated max value,  $\text{Max\_Offset}_{RBs}$  in step 1e within the applicable values for the carrier in TS 38.213 [4], table 13-1 to 13-10 limited to the table indexes with number of RBs  $N_{RB}^{CORESET}$  and number of symbols  $N_{sym}^{CORESET}$  equal to the minimum value of  $N_{RB}^{CORESET}$  in the table and minimum value of  $N_{sym}^{CORESET}$  for the selected  $N_{RB}^{CORESET}$ . If a valid  $Offset_{RBs}$  value is found, then continue from step 1g..

If a valid  $Offset_{RBs}$  value is found, then continue from step 1g..

If no valid  $Offset_{RBs}$  value is found, then select the next valid GSCN with  $F_{SSref} \leq F_{SSref\_Max}$  within the valid GSCN range for the carrier and repeat steps 1b to 1f.

If no valid  $Offset_{RBs}$  value found within the valid GSCN range then will the carrier not be possible to use as PCell and  $F_{SSref}$ ,  $k_{SSB}$ ,  $F_{PointA}$ ,  $OffsetToCarrier$  and  $OffsetToPointA$  are calculated as described in clause C.3.2 and the procedure is completed.

- 1g. Calculate  $k_{SSB}$

|  |
|--|
| $k_{SSB} = (F_{SSBlow} - F_{offsetToPointA}) / \{15 \text{ kHz for FR1, } subCarrierSpacingCommon \text{ (MIB) for FR2}\} (\text{TS 38.211 [3], clause 7.4.3.1.})$     |
| $N = SCS_{SSB} / \{15 \text{ kHz for FR1; } subCarrierSpacingCommon \text{ (MIB) for FR2}\}.$  |
| $k_{SSB} \bmod N \neq 0$ indicates that the SSB subcarriers are not aligned with the resource grid given by the SCS indicated by $subCarrierSpacingCommon$ in the MIB. |

If  $k_{SSB}$  is an integer and  $k_{SSB} \bmod N = 0$ , then continue from step 2.

If  $k_{SSB}$  is not an integer value or  $k_{SSB} \bmod N > 0$ , then select the next valid GSCN with  $F_{SSref} < F_{SSref\_Max}$  within the valid GSCN range for the carrier and repeat steps 1b to 1g.

If  $N > 1$  and no valid  $k_{SSB}$  value found within the valid GSCN range for the currently selected carrier frequency  $F_{carrier}$  then shift  $F_{carrier}$  up by  $\Delta F_{Raster}$  for Low range; or down by  $\Delta F_{Raster}$  for Mid, Mid-Low, Mid-High and High ranges and repeat steps 1a to 1g for a maximum shift of  $3 * \Delta F_{Raster}$  (see clause C.3.1, Note 1).

If no valid  $k_{SSB}$  value found within the valid GSCN range then will the carrier not be possible to use as PCell and  $F_{SSref}$ ,  $k_{SSB}$ ,  $F_{PointA}$ ,  $OffsetToCarrier$  and  $OffsetToPointA$  are calculated as described in clause C.3.2 and the procedure is completed.

## 2. Determine OffsetToCarrier

Select offsetToCarrier value for the carrier in accordance to Table C.3.2-1.

**Table C.3.2-1: Downlink and uplink offsetToCarrier default values for different frequency ranges**

| Frequency range | Downlink<br><i>offsetToCarrier</i> | Uplink<br><i>offsetToCarrier</i> |
|-----------------|------------------------------------|----------------------------------|
| Low range       | 0                                  | 0                                |
| Mid range       | 102                                | 504                              |
| High range      | 504                                | 6                                |
| Mid-Low range   | 12                                 | 36                               |
| Mid-High range  | 24                                 | 114                              |

Note: Different values of *offsetToCarrier* have been selected for Low, Mid-Low, Mid, Mid-High and High ranges to achieve enhanced test coverage of the *offsetToCarrier* range of values.

## 2b. Determine $F_{pointA}$ :

$$F_{PointA} = F_{carrierLow} - offsetToCarrier * PRB_{size}$$

## 3. Calculate $\Delta F_{OffsetCORESET-0-Carrier}$ :

The  $\Delta F_{OffsetCORESET-0-Carrier}$  value is used to calculate the Offset Carrier CORESET#0 parameter included in the test frequency tables in sub-clauses 4.3.1 and 6.2.3.

$$\Delta F_{OffsetCORESET-0-Carrier} = F_{OffsetToPointA} - Offset_{RB} * CRB_{size} - F_{carrierLow}$$

## 4. Calculate signalling parameters:

| IE field                       | Value  |
|--------------------------------|--|
| <i>ssb-SubcarrierOffset</i>    | Set to the 4 least significant bits of $k_{SSB}$ . For the case $k_{SSB} > 15$ the extended by an additional most significant bit encoded within PBCH as specified in TS 38.213 [22].<br>The IE field <i>ssb-SubcarrierOffset</i> is signalled in the MIB. |
| <i>controlResourceSetZero</i>  | Set to the index associated with the selected $Offset_{RBs}$ value in the applicable table, 13-1 to 13-10, in TS 38.213 [22].<br>The IE field <i>controlResourceSetZero</i> is signalled in the IE <i>pdcch-ConfigSIB1</i> in the MIB.                     |
| <i>absoluteFrequencySSB</i>    | Set to $F_{SSref}$ expressed in ARFCN as defined in TS 38.101-1 [15] and TS 38.101-2 [39], clause 5.4.2.   |
| <i>absoluteFrequencyPointA</i> | Set to $F_{PointA}$ expressed in ARFCN as defined in TS 38.101-1 [15] and TS 38.101-2 [39], clause 5.4.2.  |
| <i>offsetToPointA</i>          | $(F_{OffsetToPointA} - F_{PointA}) / (12 * \{15 \text{ kHz for FR1; } 60 \text{ kHz for FR2}\})$ .<br>The IE field <i>offsetToPointA</i> is signalled in IE <i>FrequencyInfoDL-SIB</i> .   |
| <i>offsetToCarrier</i>         | Set to value calculated in step 2a.<br>The IE field <i>offsetToCarrier</i> is signalled in IE <i>SCS-SpecificCarrier</i> .   |

### C.3.3 Determination of SSB and signalling parameters for a carrier without CORESET#0

The following procedure is used for calculation of SSB and signalling parameters for a carrier without a CORESET#0.

1. Calculate  $F_{SSref}$ ,  $k_{SSB}$  and  $F_{PointA}$  with the SSB lowest subcarrier at the carrier's lowest subcarrier ( $\Delta F_{OffsetSSB-Carrier}$  in Figure C.1-1 = 0):

|   |
|---|
| $F_{SSref} = F_{carrierLow} + BW_{SSB} / 2$   |
| $k_{SSB} = \{31 \text{ for FR1; } 15 \text{ for FR2}\}$ indicating that no CORESET#0 is present for the carrier (TS 38.213 [4], clause 13). |
| $offsetToCarrier = \text{target value for } offsetToCarrier \text{ dependent on frequency range as specified in Table C.3.1-1.}$            |
| $F_{PointA} = F_{carrierLow} - offsetToCarrier * PRB_{size}$  |

2. Calculate signalling parameters:

| IE field                       | Value  |
|--------------------------------|--|
| <i>ssb-SubcarrierOffset</i>    | Set to the 4 least significant bits of $k_{SSB}$ . For the case $k_{SSB} > 15$ the extended by an additional most significant bit encoded within PBCH as specified in TS 38.213 [22].<br>The IE field <i>ssb-SubcarrierOffset</i> is signalled in the MIB. |
| <i>controlResourceSetZero</i>  | Set to 0 indicating that no CORESET#0 exist (TS 38.213 [22], clause 13).<br>The IE field <i>controlResourceSetZero</i> is signalled in the IE <i>pdcch-ConfigSIB1</i> in the MIB.  |
| <i>searchSpaceZero</i>         | Set to 0 indicating that no CORESET#0 exist (TS 38.213 [22], clause 13).<br>The IE field <i>searchSpaceZero</i> is signalled in the IE <i>pdcch-ConfigSIB1</i> in the MIB.   |
| <i>absoluteFrequencySSB</i>    | Set to $F_{SSref}$ expressed in ARFCN as defined in TS 38.101-1 [15] and TS 38.101-2 [39], clause 5.4.2.   |
| <i>absoluteFrequencyPointA</i> | Set to $F_{PointA}$ expressed in ARFCN as defined in TS 38.101-1 [15] and TS 38.101-2 [39], clause 5.4.2.  |
| <i>offsetToCarrier</i>         | Set to <i>offsetToCarrier</i> target value selected in step 1.   |

---

## C.4 Determination of SSB and CORESET#0 for RRM testing with SSB SCS 120 kHz and 240 kHz

### C.4.1 General

The requirements to be met and the principles used for determining the SSB and CORESET#0 for a PCell used in RRM test cases are:

1. The complete SSB and CORESET#0 shall be within the carrier's channel bandwidth.
2. The SSB centre frequency (SSref) shall be on the synchronisation raster.
3. The SSB shall be kept as close as possible to the carrier's lower edge centre frequency.
4. The CORESET#0 configuration is selected using 24 RBs and  $Offset_{RBs} = 0$  according to Table 13-8 and Index 0 for  $SCS_{SSB} = 120$  kHz and Table 13-10 and Index 0 for  $SCS_{SSB} = 240$  kHz.
5. The first SSB subcarrier shall be aligned with the defined resource grid given by SCS indicated by *subCarrierSpacingCommon* in the MIB.

## C.4.2 Determination of SSB, CORESET#0 and signalling parameters

The following procedure is used to determine an SSB on the synchronisation raster (GSCN) and a CORESET#0 configuration ( $k_{SSB}$ ,  $\text{Offset}_{RBs} = 0$  and  $\text{OffsetToPointA}$ ) as close as possible to the carrier's lower edge. See figure C1-1 and clause C.1 for definition of parameters referenced in the procedure.

1. The target test frequencies for Low, Mid and High ranges are calculated as described in clause C.2.1.1.

For each of Low, Mid and High ranges do:

2. Determine SSB and CORESET#0:

- 2a. Calculate the lower of  $F_{SSref}$ ,  $F_{SSref\_Min}$ , correspondent to SSB lowest subcarrier being at the same frequency as the carrier's lowest subcarrier; and the higher limit of  $F_{SSref}$ ,  $F_{SSref\_Max}$ , correspondent to SSB highest subcarrier being at the same frequency as the carrier's highest subcarrier  $F_{SSref\_Min}$

|  |
|--|
| $F_{carrierLow} = \text{see formula for } F_{carrierLow} \text{ in Table C.1-1}$                   |
| $F_{SSref\_Min} = F_{carrierLow} + \text{CRBsize} * \text{Offset}_{RBs,min} + \text{BW}_{SSB} / 2$ |
| $F_{SSref\_Max} = F_{carrierLow} + \Delta F_{carrierBandwidth} - \text{BW}_{SSB} / 2$              |

- 2b. Calculate  $GSCN_{MIN}$  correspondent to  $F_{SSref\_Min}$  in accordance to TS 38.101-2 [7], clause 5.4.3.1 and select the closest valid GSCN value with  $GSCN \geq GSCN_{MIN}$  for the carrier in according to the carrier's synchronisation raster as specified in clause 5.4.3.3 in TS 38.101-2 [8].

- 2c. Calculate the  $F_{SSref}$  for the selected GSCN value in step 2b in accordance to TS 38.101-2 [7], clause 5.4.3.1 for FR2.

- 2d. Calculate the frequency  $F_{SSBLow}$  and shift the carrier frequency to achieve  $F_{carrierLow}$  equal or as close as possible  $F_{SSBLow}$  on the carrier's frequency raster.

|   |
|---|
| $F_{SSBLow} = F_{SSref} - \text{BW}_{SSB} / 2$  |
| $F_{carrier} = \text{calculated using the formula in clause C.2.1.1 with } F_{DL\_Low} = F_{SSBLow}$            |
| $F_{carrierLow} = \text{see formula for } F_{carrierLow} \text{ in Table C.1-1 with new value of } F_{carrier}$ |

- 2e. Calculate  $k_{SSB}$

|   |
|---|
| $k_{SSB} = (F_{SSBLow} - F_{carrierLow}) / \text{subCarrierSpacingCommon} \text{ (MIB, FR2)} \text{ (TS 38.211 [3], clause 7.4.3.1).}$                                      |
| $N = \text{SCS}_{SSB} / \text{subCarrierSpacingCommon} \text{ (MIB, FR2).}$   |
| $k_{SSB} \text{ MOD } N \neq 0$ indicates that the SSB subcarriers are not aligned with the resource grid given by the SCS indicated by subCarrierSpacingCommon in the MIB. |

If  $k_{SSB}$  is an integer and  $k_{SSB} \text{ MOD } N = 0$ , then continue from step 3 else modify the carrier frequency to get valid value of  $k_{SSB}$  and  $k_{SSB} \text{ MOD } N = 0$ .

3. Calculate Point A frequency,  $\Delta F_{offsetToCarrier}$  and  $\Delta F_{OffsetToPointA}$ :

The CORESET#0 configuration is selected using 24 RBs and  $\text{Offset}_{RBs} = 0$  according to Table 13-8 and Index 0 for  $\text{SCS}_{SSB} = 120$  kHz and Table 13-10 and Index 0 for  $\text{SCS}_{SSB} = 240$  kHz (see C.4.1). This means that  $\text{OffsetToPointA} = F_{carrierLow}$ . By selecting Point A equal to  $F_{carrierLow}$  this gives:

|                                  |
|----------------------------------|
| $F_{PointA} = F_{carrierLow}$    |
| $\Delta F_{offsetToCarrier} = 0$ |
| $\Delta F_{OffsetToPointA} = 0$  |

4. Calculate signalling parameters:

| IE field                       | Value   |
|--------------------------------|---|
| <i>ssb-SubcarrierOffset</i>    | Set to the 4 least significant bits of $k_{SSB}$ .<br>The IE field <i>ssb-SubcarrierOffset</i> is signalled in the MIB.   |
| <i>controlResourceSetZero</i>  | 0 (Index=0 in table 13-8 for $SCS_{SSB} = 120$ KHz and table 13-10 for $SCS_{SSB} = 240$ KHz in TS 38.213 [22]).<br>The IE field <i>controlResourceSetZero</i> is signalled in the IE <i>pdcch-ConfigSIB1</i> in the MIB. |
| <i>absoluteFrequencySSB</i>    | Set to $F_{SSref}$ expressed in ARFCN as defined in TS 38.101-1 [15] and TS 38.101-2 [39], clause 5.4.2.  |
| <i>absoluteFrequencyPointA</i> | Set to $F_{PointA}$ expressed in ARFCN as defined in TS 38.101-1 [15] and TS 38.101-2 [39], clause 5.4.2.   |
| <i>offsetToPointA</i>          | 0<br>The IE field <i>offsetToPointA</i> is signalled in IE <i>FrequencyInfoDL-SIB</i> .   |
| <i>offsetToCarrier</i>         | 0<br>The IE field <i>offsetToCarrier</i> is signalled in IE <i>SCS-SpecificCarrier</i> .  |

| 2018-05 | RAN5#79            | R5-183256 | -    | - | - | pCR update chapter for test frequencies - FR1   | 1.0.0  |
| 2018-05 | RAN5#79            | R5-183916 | -    | - | - | TP for Annex A in TS 38.508-1 and adding a set of Connection Diagrams                 | 1.0.0  |
| 2018-05 | RAN5#79            | R5-183920 | -    | - | - | Introduction of Environmental conditions for FR1                                      | 1.0.0  |
| 2018-05 | RAN5#79            | R5-182249 | -    | - | - | Add reference to NR cell table  | 1.0.0  |
| 2018-05 | RAN5#79            | R5-183210 | -    | - | - | Update PDCCH  | 1.0.0  |
| 2018-05 | RAN5#79            | R5-182312 | -    | - | - | Update chapter 4.5.1 General  | 1.0.0  |
| 2018-05 | RAN5#79            | R5-182313 | -    | - | - | Update RRC CONNECTED state  | 1.0.0  |
| 2018-05 | RAN5#79            | R5-183087 | -    | - | - | Addition of new RRCReconfiguration definition for AM/UM bearers                       | 1.0.0  |
| 2018-05 | RAN5#79            | R5-183088 | -    | - | - | Updates to UE capability information elements   | 1.0.0  |
| 2018-05 | RAN5#79            | R5-183250 | -    | - | - | Updates to UE capability information elements   | 1.0.0  |
| 2018-05 | RAN5#79            | R5-183083 | -    | - | - | Update RACH   | 1.0.0  |
| 2018-05 | RAN5#79            | R5-183084 | -    | - | - | Update ARFCN  | 1.0.0  |
| 2018-05 | RAN5#79            | R5-183211 | -    | - | - | Update BWP-UplinkDedicated  | 1.0.0  |
| 2018-05 | RAN5#79            | R5-183212 | -    | - | - | Update serving cell   | 1.0.0  |
| 2018-05 | RAN5#79            | R5-183214 | -    | - | - | Update RadioBearerConfig  | 1.0.0  |
| 2018-05 | RAN5#79            | R5-183215 | -    | - | - | Update RRCReconfiguration   | 1.0.0  |
| 2018-05 | RAN5#79            | R5-182381 | -    | - | - | Update MIB  | 1.0.0  |
| 2018-05 | RAN5#79            | R5-183090 | -    | - | - | Update RRCReconfiguration for measurements  | 1.0.0  |
| 2018-05 | RAN5#79            | R5-183264 | -    | - | - | Corrections to clause 4.5   | 1.0.0  |
| 2018-05 | RAN5#79            | R5-183249 | -    | - | - | Correction to the Table CellGroupConfig   | 1.0.0  |
| 2018-05 | RAN5#79            | R5-183255 | -    | - | - | Update of FR1 signal levels   | 1.0.0  |
| 2018-05 | RAN5#79            | R5-183216 | -    | - | - | Update CellGroupConfig and some related information elements                          | 1.0.0  |
| 2018-05 | RAN5#79            | R5-183086 | -    | - | - | Update CSI-MeasConfig   | 1.0.0  |
| 2018-05 | RAN5#79            | R5-183260 | -    | - | - | Update some information elements related to MeasConfig                                | 1.0.0  |
| 2018-06 | RAN#80             | RP-181207 | -    | - | - | put under revision control as v15.0.0 with small editorial changes                    | 15.0.0 |
| 2018-09 | RAN#81             | R5-184087 | 0004 | - | F | Update chapter 3  | 15.1.0 |
| 2018-09 | RAN#81             | R5-184297 | 0012 | - | F | Addition of Mid channel bandwidth definition for several missing bands                | 15.1.0 |
| 2018-09 | RAN#81             | R5-184327 | 0014 | - | F | Adding condition for CP-OFDM waveform   | 15.1.0 |
| 2018-09 | RAN#81             | R5-184347 | 0019 | - | F | Modified RRC_IDLE procedure to allow multi PDN configuration throughout the test case | 15.1.0 |
| 2018-09 | RAN#81             | R5-184471 | 0044 | - | F | Introduction of test frequencies for NR band n77                                      | 15.1.0 |
| 2018-09 | RAN#81             | R5-184472 | 0045 | - | F | Introduction of test frequencies for NR band n78                                      | 15.1.0 |
| 2018-09 | RAN#81             | R5-184473 | 0046 | - | F | Introduction of test frequencies for NR band n79                                      | 15.1.0 |
| 2018-09 | RAN#81             | R5-184474 | 0047 | - | F | Introduction of test frequencies for NR band n257                                     | 15.1.0 |
| 2018-09 | RAN#81             | R5-184475 | 0048 | - | F | Introduction of test frequencies for NR band n258                                     | 15.1.0 |
| 2018-09 | RAN#81             | R5-184476 | 0049 | - | F | Introduction of test frequencies for NR band n260                                     | 15.1.0 |
| 2018-09 | RAN#81             | R5-184477 | 0050 | - | F | Introduction of test frequencies for NR band n261                                     | 15.1.0 |
| 2018-09 | RAN#81             | R5-184599 | 0056 | - | F | Add IE SS-RSSI-Measurement  | 15.1.0 |
| 2018-09 | RAN#81             | R5-184617 | 0059 | - | F | Update MIB  | 15.1.0 |
| 2018-09 | RAN#81             | R5-184630 | 0072 | - | F | Editorial Update in clause 4.6.3  | 15.1.0 |
| 2018-09 | RAN#81             | R5-184783 | 0079 | - | F | Introduce 5GMM messages   | 15.1.0 |
| 2018-09 | RAN#81             | R5-184785 | 0080 | - | F | Introduce 5GSM messages   | 15.1.0 |
| 2018-09 | RAN#81             | R5-184806 | 0081 | - | F | Mid test CH BW for n71  | 15.1.0 |
| 2018-09 | RAN#81             | R5-185028 | 0002 | 1 | F | Add SRB1 and SRB2 with NR PDCP  | 15.1.0 |
| 2018-09 | RAN#81             | R5-185029 | 0003 | 1 | F | Update serving cell   | 15.1.0 |
| 2018-09 | RAN#81             | R5-185030 | 0005 | 1 | F | Introduce SA RRC messages   | 15.1.0 |
| 2018-09 | RAN#81             | R5-185031 | 0006 | 1 | F | Correct IE FrequencyInfoDL  | 15.1.0 |
| 2018-09 | RAN#81             | R5-185032 | 0007 | 1 | F | Introduce SA system information blocks  | 15.1.0 |
| 2018-09 | RAN#81             | R5-185033 | 0008 | 1 | F | Introduce SA other information elements   | 15.1.0 |
| 2018-09 | RAN#81             | R5-185035 | 0013 | 1 | F | Correct IE GSCN-ValueNR   | 15.1.0 |
| 2018-09 | RAN#81             | R5-185036 | 0017 | 1 | F | Update of FR1 signal levels   | 15.1.0 |
| 2018-09 | RAN#81             | R5-185037 | 0022 | 1 | F | Addition of IP Connectivity check procedure   | 15.1.0 |
| 2018-09 | RAN#81             | R5-185038 | 0053 | 1 | F | Introduce SA radio resource control information elements                              | 15.1.0 |

|         |        |           |      |   |   |   |        |
|---------|--------|-----------|------|---|---|---|--------|
| 2018-09 | RAN#81 | R5-185039 | 0054 | 1 | F | Update IE PhysicalCellGroupConfig   | 15.1.0 |
| 2018-09 | RAN#81 | R5-185040 | 0055 | 1 | F | Introduce cell configurations and timer tolerances chapter headers                      | 15.1.0 |
| 2018-09 | RAN#81 | R5-185041 | 0057 | 1 | F | Add IE SSB-MTC  | 15.1.0 |
| 2018-09 | RAN#81 | R5-185042 | 0058 | 1 | F | Update BWP  | 15.1.0 |
| 2018-09 | RAN#81 | R5-185043 | 0060 | 1 | F | Update PDSCH-Config   | 15.1.0 |
| 2018-09 | RAN#81 | R5-185044 | 0062 | 1 | F | Update PUCCH and PUSCH configuration  | 15.1.0 |
| 2018-09 | RAN#81 | R5-185045 | 0063 | 1 | F | Update RACH configuration   | 15.1.0 |
| 2018-09 | RAN#81 | R5-185046 | 0065 | 1 | F | Update CellGroupConfig  | 15.1.0 |
| 2018-09 | RAN#81 | R5-185047 | 0066 | 1 | F | Update CSI-MeasConfig   | 15.1.0 |
| 2018-09 | RAN#81 | R5-185048 | 0067 | 1 | F | Update MeasConfig   | 15.1.0 |
| 2018-09 | RAN#81 | R5-185049 | 0068 | 1 | F | Update other information elements   | 15.1.0 |
| 2018-09 | RAN#81 | R5-185050 | 0070 | 1 | F | Update RadioBearerConfig  | 15.1.0 |
| 2018-09 | RAN#81 | R5-185051 | 0073 | 1 | F | Specifying content for MeasResultSCG-Failure  | 15.1.0 |
| 2018-09 | RAN#81 | R5-185052 | 0075 | 1 | F | Editorial correction to band representation of non-contiguous EN-DC band combination    | 15.1.0 |
| 2018-09 | RAN#81 | R5-185053 | 0076 | 1 | F | Correction to RLC-Config IE   | 15.1.0 |
| 2018-09 | RAN#81 | R5-185054 | 0077 | 1 | F | Correction to RadioBearerConfig-DRB   | 15.1.0 |
| 2018-09 | RAN#81 | R5-185055 | 0078 | 1 | F | Corrections and updates to BandCombinationList and Feature Set IEs                      | 15.1.0 |
| 2018-09 | RAN#81 | R5-185056 | 0084 | 1 | F | Corrections and updates to UE Capability IEs  | 15.1.0 |
| 2018-09 | RAN#81 | R5-185085 | 0087 | - | F | Addition of UM condition to RLC-Bearer-Config IE  | 15.1.0 |
| 2018-09 | RAN#81 | R5-185133 | 0086 | 1 | F | Correction of clause 4.3.3.2.3  | 15.1.0 |
| 2018-09 | RAN#81 | R5-185163 | 0018 | 1 | F | Modified RRC_Connected procedure for Multi PDN throughout the test case.                | 15.1.0 |
| 2018-09 | RAN#81 | R5-185165 | 0020 | 1 | F | Update EN-DC Generic Procedure Parameter for Multi-PDN addition throughout Test Case    | 15.1.0 |
| 2018-09 | RAN#81 | R5-185168 | 0082 | 1 | F | Introduction of OTA signalling test environment   | 15.1.0 |
| 2018-09 | RAN#81 | R5-185171 | 0009 | 2 | F | Updates to PDCCH and SearchSpace configurations   | 15.1.0 |
| 2018-09 | RAN#81 | R5-185173 | 0016 | 1 | F | Test Frequencies  | 15.1.0 |
| 2018-09 | RAN#81 | R5-185177 | 0051 | 1 | F | Introduction of test frequencies for signalling testing in clause 6                     | 15.1.0 |
| 2018-09 | RAN#81 | R5-185250 | 0023 | 1 | F | Introduction of test frequencies for NR band n1   | 15.1.0 |
| 2018-09 | RAN#81 | R5-185251 | 0024 | 1 | F | Introduction of test frequencies for NR band n2   | 15.1.0 |
| 2018-09 | RAN#81 | R5-185252 | 0025 | 1 | F | Introduction of test frequencies for NR band n3   | 15.1.0 |
| 2018-09 | RAN#81 | R5-185253 | 0026 | 1 | F | Introduction of test frequencies for NR band n5   | 15.1.0 |
| 2018-09 | RAN#81 | R5-185254 | 0027 | 1 | F | Introduction of test frequencies for NR band n7   | 15.1.0 |
| 2018-09 | RAN#81 | R5-185255 | 0028 | 1 | F | Introduction of test frequencies for NR band n8   | 15.1.0 |
| 2018-09 | RAN#81 | R5-185256 | 0029 | 1 | F | Introduction of test frequencies for NR band n12  | 15.1.0 |
| 2018-09 | RAN#81 | R5-185257 | 0030 | 1 | F | Introduction of test frequencies for NR band n20  | 15.1.0 |
| 2018-09 | RAN#81 | R5-185258 | 0031 | 1 | F | Introduction of test frequencies for NR band n25  | 15.1.0 |
| 2018-09 | RAN#81 | R5-185259 | 0032 | 1 | F | Introduction of test frequencies for NR band n28  | 15.1.0 |
| 2018-09 | RAN#81 | R5-185260 | 0033 | 1 | F | Introduction of test frequencies for NR band n34  | 15.1.0 |
| 2018-09 | RAN#81 | R5-185261 | 0034 | 1 | F | Introduction of test frequencies for NR band n38  | 15.1.0 |
| 2018-09 | RAN#81 | R5-185262 | 0035 | 1 | F | Introduction of test frequencies for NR band n39  | 15.1.0 |
| 2018-09 | RAN#81 | R5-185263 | 0036 | 1 | F | Introduction of test frequencies for NR band n40  | 15.1.0 |
| 2018-09 | RAN#81 | R5-185264 | 0037 | 1 | F | Update of test frequencies for NR band n41  | 15.1.0 |
| 2018-09 | RAN#81 | R5-185265 | 0038 | 1 | F | Introduction of test frequencies for NR band n51  | 15.1.0 |

| 2018-12 | RAN#82 | R5-186837 | 0291 | - | F | Correction of test frequencies for NR band n39                                | 15.2.0 |
| 2018-12 | RAN#82 | R5-186838 | 0292 | - | F | Correction of test frequencies for NR band n40                                | 15.2.0 |
| 2018-12 | RAN#82 | R5-186839 | 0293 | - | F | Correction of test frequencies for NR band n41                                | 15.2.0 |
| 2018-12 | RAN#82 | R5-186840 | 0294 | - | F | Correction of test frequencies for NR band n51                                | 15.2.0 |
| 2018-12 | RAN#82 | R5-186841 | 0295 | - | F | Introduction of test frequencies for NR band n66                              | 15.2.0 |
| 2018-12 | RAN#82 | R5-186842 | 0296 | - | F | Introduction of test frequencies for NR band n70                              | 15.2.0 |
| 2018-12 | RAN#82 | R5-186844 | 0298 | - | F | Correction of test frequencies for NR band n75                                | 15.2.0 |
| 2018-12 | RAN#82 | R5-186845 | 0299 | - | F | Correction of test frequencies for NR band n76                                | 15.2.0 |
| 2018-12 | RAN#82 | R5-186846 | 0300 | - | F | Correction of test frequencies for NR band n77                                | 15.2.0 |
| 2018-12 | RAN#82 | R5-186847 | 0301 | - | F | Correction of test frequencies for NR band n78                                | 15.2.0 |
| 2018-12 | RAN#82 | R5-186848 | 0302 | - | F | Correction of test frequencies for NR band n79                                | 15.2.0 |
| 2018-12 | RAN#82 | R5-186850 | 0304 | - | F | Correction of test frequencies for NR band n258                               | 15.2.0 |
| 2018-12 | RAN#82 | R5-186851 | 0305 | - | F | Correction of test frequencies for NR band n260                               | 15.2.0 |
| 2018-12 | RAN#82 | R5-186852 | 0306 | - | F | Correction of test frequencies for NR band n261                               | 15.2.0 |
| 2018-12 | RAN#82 | R5-186855 | 0309 | - | F | Introduction of preamble test states  | 15.2.0 |
| 2018-12 | RAN#82 | R5-186857 | 0311 | - | F | Introduction DCI format 1_0 for paging, SI and random access                  | 15.2.0 |
| 2018-12 | RAN#82 | R5-186858 | 0312 | - | F | Correction to DCI format 1_1  | 15.2.0 |
| 2018-12 | RAN#82 | R5-186859 | 0313 | - | F | Update IE RateMatchPattern  | 15.2.0 |
| 2018-12 | RAN#82 | R5-186861 | 0315 | - | F | Correction of generic procedure parameter naming for test loop function       | 15.2.0 |
| 2018-12 | RAN#82 | R5-186862 | 0316 | - | F | Correction of test procedures to activate and deactivate UE Beamlock Function | 15.2.0 |
| 2018-12 | RAN#82 | R5-186893 | 0318 | - | F | Corrections to the notes in the OTA signal level tables                       | 15.2.0 |
| 2018-12 | RAN#82 | R5-186911 | 0320 | - | F | Add RRCSsetupComplete   | 15.2.0 |
| 2018-12 | RAN#82 | R5-186912 | 0321 | - | F | Add RRCSsetupRequest  | 15.2.0 |
| 2018-12 | RAN#82 | R5-186913 | 0322 | - | F | Add RRCSsystemInfoRequest   | 15.2.0 |
| 2018-12 | RAN#82 | R5-186916 | 0323 | - | F | Add SecurityModeCommand   | 15.2.0 |
| 2018-12 | RAN#82 | R5-186918 | 0324 | - | F | Update SystemInformation  | 15.2.0 |
| 2018-12 | RAN#82 | R5-186920 | 0325 | - | F | Add UEAssistanceInformation   | 15.2.0 |
| 2018-12 | RAN#82 | R5-186921 | 0326 | - | F | Update UECapabilityEnquiry  | 15.2.0 |
| 2018-12 | RAN#82 | R5-186922 | 0327 | - | F | Update ULInformationTransfer  | 15.2.0 |
| 2018-12 | RAN#82 | R5-186923 | 0328 | - | F | Update IE PTRS-UplinkConfig   | 15.2.0 |
| 2018-12 | RAN#82 | R5-186925 | 0330 | - | F | Update RRCHResumeRequest  | 15.2.0 |
| 2018-12 | RAN#82 | R5-186929 | 0331 | - | F | Update PTRS-DownlinkConfig  | 15.2.0 |
| 2018-12 | RAN#82 | R5-186936 | 0335 | - | F | Update PUCCH-SpatialRelationInfo  | 15.2.0 |
| 2018-12 | RAN#82 | R5-186987 | 0342 | - | F | Addition of SIB3 message_Resubmission of 185792                               | 15.2.0 |
| 2018-12 | RAN#82 | R5-186988 | 0343 | - | F | Addition of SIB5 message_Resubmission of 186054                               | 15.2.0 |
| 2018-12 | RAN#82 | R5-186989 | 0344 | - | F | Addition of SIB6 - SIB8 message_Resubmission of 186055                        | 15.2.0 |
| 2018-12 | RAN#82 | R5-186990 | 0345 | - | F | Addition of SIB9 message_Resubmission of 186056                               | 15.2.0 |
| 2018-12 | RAN#82 | R5-187026 | 0348 | - | F | Addition of P-Max in Test environment for RF test                             | 15.2.0 |
| 2018-12 | RAN#82 | R5-187028 | 0350 | - | F | Addition of test frequencies for SUL band n80                                 | 15.2.0 |
| 2018-12 | RAN#82 | R5-187030 | 0352 | - | F | Addition of test frequencies for SUL band n82                                 | 15.2.0 |
| 2018-12 | RAN#82 | R5-187031 | 0353 | - | F | Addition of test frequencies for SUL band n83                                 | 15.2.0 |
| 2018-12 | RAN#82 | R5-187032 | 0354 | - | F | Addition of test frequencies for SUL band n84                                 | 15.2.0 |
| 2018-12 | RAN#82 | R5-187033 | 0355 | - | F | Addition of test frequencies for SUL band n86                                 | 15.2.0 |
| 2018-12 | RAN#82 | R5-187110 | 0358 | - | F | Correction to default message contents for SRB3 configuration                 | 15.2.0 |
| 2018-12 | RAN#82 | R5-187159 | 0361 | - | F | Updates to Configuration Update 5GMM messages                                 | 15.2.0 |
| 2018-12 | RAN#82 | R5-187160 | 0362 | - | F | Updates to De-registration 5GMM messages                                      | 15.2.0 |
| 2018-12 | RAN#82 | R5-187161 | 0363 | - | F | Updates to Identity 5GMM messages   | 15.2.0 |
| 2018-12 | RAN#82 | R5-187162 | 0364 | - | F | Updates to NAS Transport 5GMM messages  | 15.2.0 |
| 2018-12 | RAN#82 | R5-187163 | 0365 | - | F | Updates to Notification 5GMM messages   | 15.2.0 |
| 2018-12 | RAN#82 | R5-187164 | 0366 | - | F | Updates to PDU session authentication 5GSM messages                           | 15.2.0 |
| 2018-12 | RAN#82 | R5-187166 | 0368 | - | F | Updates to PDU session modification 5GSM messages                             | 15.2.0 |
| 2018-12 | RAN#82 | R5-187172 | 0374 | - | F | Removal of Editor's Notes in section 4.6.3                                    | 15.2.0 |
